Explanation:

For which of the following actions can you use the SAP Fiori app Manage Purchase Orders?

- A. Create purchase orders for direct consumption
- B. Maintain some default values of purchase orders for your user
- C. Convert your purchase requisitions to purchase orders
- D. **Edit the fields of multiple purchase orders simultaneously**

Answer: D

Explanation:

The SAP Fiori app "Manage Purchase Orders" is used to perform various actions related to purchase orders. Among the options provided, the correct action is:

- * Edit the fields of multiple purchase orders simultaneously (Option C): The "Manage Purchase Orders" app allows users to edit multiple purchase orders at once, streamlining bulk updates and changes. This functionality is particularly useful for making mass updates to fields such as delivery dates, quantities, or payment terms. The SAP Fiori Apps Reference Library confirms this capability.
- * A. Convert your purchase requisitions to purchase orders: Converting purchase requisitions to purchase orders is handled in other apps, such as "Process Purchase Requisitions," not in "Manage Purchase Orders."
- * B. Create purchase orders for direct consumption: Creating purchase orders for direct consumption is typically done using apps like "Create Purchase Order - Advanced" or "Manage Purchase Orders," but it is not a primary function of this app.
- * D. Maintain some default values of purchase orders for your user: Maintaining default values is typically configured in user-specific settings or through business roles, not directly in the "Manage Purchase Orders" app.
- * SAP Fiori Apps Reference Library: Provides detailed descriptions of the functionalities available in the "Manage Purchase Orders" app. <https://fioriappslibrary.hana.ondemand.com>

Which layer of SAP S/4HANA provides a universal language to read and process data across different applications?

- A. SAP Fiori
- **B. Core Data Services**
- C. SAP HANA
- D. SAP Business Suite

Answer: B

Explanation:

Core Data Services (CDS) in SAP S/4HANA provides a universal language to read and process data consistently across different applications. Below is an explanation of the correct answer:

- * Core Data Services (B):CDS enables the creation of semantically rich data models that can be consumed by various applications, regardless of their underlying technologies. It provides a unified way to define and access data, ensuring consistency and reusability.
- * SAP Business Suite (A):SAP Business Suite refers to a suite of enterprise applications and is not a layer for universal data access.
- * SAP HANA (C):SAP HANA is the underlying database platform that powers SAP S/4HANA. While it supports advanced data processing, it does not provide the abstraction layer offered by CDS.
- * SAP Fiori (D):SAP Fiori is a user interface technology for building intuitive apps. It relies on CDS views for data access but does not serve as a universal data language itself.
