

SCS-C03 Test Lab Questions & SCS-C03 Latest Exam Question

What's more, part of that Actual4Dumps SCS-C03 dumps now are free: <https://drive.google.com/open?id=1zQ9192CrVfQbBzj0CuWqWNAOPhmu0W1c>

We all know that pass the SCS-C03 exam will bring us many benefits, but it is not easy for every candidate to achieve it. The SCS-C03 guide torrent is a tool that aimed to help every candidate to pass the exam. Our SCS-C03 exam materials can installation and download set no limits for difficulty of the computers and persons. You can use our SCS-C03 Practice Questions directly. We guarantee you that the SCS-C03 study materials we provide to you are useful and can help you pass the test.

On the one thing, our company has employed a lot of leading experts in the field to compile the SCS-C03 exam torrents, so you can definitely feel rest assured about the high quality of our SCS-C03 question torrents. On the other thing, the pass rate among our customers who prepared the exam under the guidance of our SCS-C03 Study Materials has reached as high as 98% to 100%. What's more, you will have more opportunities to get promotion as well as a pay raise in the near future after using our SCS-C03 question torrents since you are sure to get the SCS-C03 certification.

Free PDF Quiz Reliable Amazon - SCS-C03 Test Lab Questions

Several advantages we now offer for your reference. On the one hand, our SCS-C03 learning questions engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies, thus you can 100% trust our SCS-C03 Exam Engine. On the other hand, the professional SCS-C03 study materials determine the high pass rate. According to the research statistics, we can confidently tell that 99% candidates have passed the SCS-C03 exam.

Amazon AWS Certified Security - Specialty Sample Questions (Q32-Q37):

NEW QUESTION # 32

A company is planning to deploy a new log analysis environment. The company needs to analyze logs from multiple AWS services in near real time. The solution must provide the ability to search the logs and must send alerts to an existing Amazon Simple Notification Service (Amazon SNS) topic when specific logs match detection rules.

Which solution will meet these requirements?

- A. Analyze the logs by using Amazon QuickSight. Search the logs by listing the query results in a dashboard. Run queries to match logs with detection rules and to send alerts to the SNS topic.
- **B. Analyze the logs by using Amazon OpenSearch Service. Search the logs from the OpenSearch API. Use OpenSearch Service Security Analytics to match logs with detection rules and to send alerts to the SNS topic.**
- C. Analyze the logs by using Amazon CloudWatch Logs. Use a subscription filter to match logs with detection rules and to send alerts to the SNS topic. Search the logs manually by using CloudWatch Logs Insights.
- D. Analyze the logs by using AWS Security Hub. Search the logs from the Findings page in Security Hub. Create custom actions to match logs with detection rules and to send alerts to the SNS topic.

Answer: B

Explanation:

Amazon OpenSearch Service is designed for near real-time log ingestion, indexing, and search across large volumes of data.

According to the AWS Certified Security - Specialty Study Guide, OpenSearch supports advanced log analytics use cases and integrates with OpenSearch Security Analytics, which provides prebuilt and custom detection rules.

Security Analytics can continuously evaluate incoming logs from multiple AWS services and generate alerts when detection rules are matched. These alerts can be forwarded to Amazon SNS with minimal configuration.

OpenSearch also provides powerful search and query capabilities through APIs and dashboards.

Option C supports detection but lacks advanced correlation and scalable search capabilities. Option B is not a log analytics service.

Option D is a visualization service and does not support real-time detection.

AWS guidance recommends OpenSearch Service for centralized, near real-time log analysis and alerting.

AWS Logging and Monitoring Architecture

NEW QUESTION # 33

A company runs an application on a fleet of Amazon EC2 instances. The application is accessible to users around the world. The company associates an AWS WAF web ACL with an Application Load Balancer (ALB) that routes traffic to the EC2 instances.

A security engineer is investigating a sudden increase in traffic to the application. The security engineer discovers a significant amount of potentially malicious requests coming from hundreds of IP addresses in two countries. The security engineer wants to quickly limit the potentially malicious requests. The security engineer does not want to prevent legitimate users from accessing the application.

Which solution will meet these requirements?

- **A. Use AWS WAF to implement a rate-based rule for all incoming requests.**
- B. Edit the ALB security group to include a geographical match rule to block all incoming traffic from the two countries.
- C. Add deny rules to the ALB security group that prohibit incoming requests from the IP addresses.
- D. Use AWS WAF to implement a geographical match rule to block all incoming traffic from the two countries.

Answer: A

Explanation:

A rate-based rule in AWS WAF is designed to quickly mitigate spikes and potential layer 7 floods by tracking request rates per originating IP and temporarily blocking (or counting/challenging, depending on configuration) IPs that exceed a defined threshold within a 5-minute rolling window. In this scenario, the malicious traffic is distributed across hundreds of IPs in two countries, and the application still needs to remain available globally for legitimate users. A rate-based rule provides fast, targeted throttling that reduces abusive request patterns without permanently blocking entire geographies. This aligns with "quickly limit" while minimizing collateral impact.

Blocking both countries with a geo match rule (Option B) would likely block legitimate users located in those countries, which violates the requirement. Security groups (Options C and D) cannot natively enforce geographic filtering, and they are not well suited for large, rapidly changing sets of public source IPs at the application layer. Additionally, WAF operates at layer 7 with richer matching (rate limiting, URI/header patterns, bot controls), which is the appropriate control point when the ALB already has a web ACL associated. Therefore, implementing an AWS WAF rate-based rule is the most effective and least disruptive immediate mitigation.

NEW QUESTION # 34

A company must immediately disable compromised IAM users across all AWS accounts and collect all actions performed by the user in the last 7 days. Which solution will meet these requirements?

- A. Remove permission sets and query logs using CloudWatch Logs Insights.
- B. Remove IAM policies and query logs in Security Hub.
- C. Disable the IAM user and query CloudTrail logs in Amazon S3 using Athena.
- **D. Disable the user in IAM Identity Center and query the organizational event data store.**

Answer: D

Explanation:

AWS IAM Identity Center centrally manages user access across an AWS Organization. Disabling the user in Identity Center

immediately revokes access to all AWS accounts. According to AWS Certified Security - Specialty documentation, organizational CloudTrail event data stores provide centralized, queryable access to all events across accounts. Using CloudTrail Lake enables direct querying of activity without exporting logs. Disabling the user at the Identity Center level ensures full containment.

NEW QUESTION # 35

A company has a multi-account strategy that uses an organization in AWS Organizations with all features enabled. The company has enabled trusted access for AWS Account Management. New accounts are provisioned through AWS Control Tower Account Factory.

The company must ensure that all new accounts in the organization become AWS Security Hub member accounts. Which solution will meet these requirements with the LEAST development effort?

- A. Use the organization's management account to designate a Security Hub delegated administrator account. In the delegated administrator account, create a configuration policy to enable Security Hub. Associate the configuration policy with the organization root.
- B. Enable Security Hub in the organization's management account. Create an AWS Step Functions workflow. Create an Amazon EventBridge rule to invoke the workflow when a CreateAccount event occurs.
- C. Enable Security Hub in the organization's management account. Create an AWS Lambda function to enable Security Hub for new accounts. Invoke the Lambda function by using an AWS Control Tower lifecycle event that occurs when a new account is provisioned.
- D. Enable Security Hub in the organization's management account. Wait for all new accounts to complete automatic onboarding.

Answer: A

NEW QUESTION # 36

An application is running on an Amazon EC2 instance that has an IAM role attached. The IAM role provides access to an AWS Key Management Service (AWS KMS) customer managed key and an Amazon S3 bucket.

The key is used to access 2 TB of sensitive data that is stored in the S3 bucket. A security engineer discovers a potential vulnerability on the EC2 instance that could result in the compromise of the sensitive data. Due to other critical operations, the security engineer cannot immediately shut down the EC2 instance for vulnerability patching.

What is the FASTEST way to prevent the sensitive data from being exposed?

- A. Block access to the public range of S3 endpoint IP addresses by using a host-based firewall. Ensure that internet-bound traffic from the affected EC2 instance is routed through the host-based firewall.
- B. Download the data from the existing S3 bucket to a new EC2 instance. Then delete the data from the S3 bucket. Re-encrypt the data with a client-based key. Upload the data to a new S3 bucket.
- C. Revoke the IAM role's active session permissions. Update the S3 bucket policy to deny access to the IAM role. Remove the IAM role from the EC2 instance profile.
- D. Disable the current key. Create a new KMS key that the IAM role does not have access to, and re-encrypt all the data with the new key. Schedule the compromised key for deletion.

Answer: C

Explanation:

AWS incident response best practices emphasize rapid containment to prevent further data exposure.

According to the AWS Certified Security - Specialty Study Guide, the fastest and least disruptive containment method for compromised compute resources is to immediately revoke credentials and permissions rather than modifying data or infrastructure. Revoking the IAM role's active sessions prevents the EC2 instance from continuing to access AWS services.

Updating the S3 bucket policy to explicitly deny access to the IAM role ensures immediate enforcement, even if temporary credentials remain cached. Removing the IAM role from the instance profile further prevents new credentials from being issued.

Option A and D involve large-scale data movement or re-encryption, which is time-consuming and operationally expensive. Option B relies on network-level controls that do not prevent access through private AWS endpoints.

AWS guidance explicitly recommends credential revocation and policy-based denial as the fastest containment step during active incidents.

NEW QUESTION # 37

.....

Actual4Dumps believes in customer satisfaction and strives hard to make the entire Amazon SCS-C03 exam preparation process simple, smart, and successful. These Amazon SCS-C03 exam questions formats are Amazon SCS-C03 Pdf Dumps file, desktop practice test software and web-based practice test software. All these three Actual4Dumps's Amazon SCS-C03 exam dumps formats contain the real and updated SCS-C03 practice test.

SCS-C03 Latest Exam Question: <https://www.actual4dumps.com/SCS-C03-study-material.html>

It is important to cover AWS Certified Security - Specialty (SCS-C03) exam topics and check if you need to practice them, You have no time to prepare the SCS-C03 certification dumps and no energy to remember the key points of SCS-C03 real dumps, Amazon SCS-C03 Test Lab Questions That's why we exist and be growing faster, Our SCS-C03 Latest Exam Question - AWS Certified Security - Specialty exam questions provide with the software which has a variety of self-study and self-assessment functions to detect learning results.

More than One Certificate, The following topics are general guidelines for the content likely to be included on the exam, It is important to cover AWS Certified Security - Specialty (SCS-C03) exam topics and check if you need to practice them.

Try Amazon SCS-C03 Dumps to achieve wonderful results

You have no time to prepare the SCS-C03 certification dumps and no energy to remember the key points of SCS-C03 real dumps, That's why we exist and be growing faster.

Our AWS Certified Security - Specialty exam questions provide with the software which SCS-C03 has a variety of self-study and self-assessment functions to detect learning results, We are the best choice for candidates who are urgent to pass SCS-C03 exams and acquire the certification, our Amazon SCS-C03 exam training torrent will assist you pass certificate exam certainly.
