

# 2026 Fantastic AZ-700: Designing and Implementing Microsoft Azure Networking Solutions Practical Information

BONUS!!! Download part of TestPassKing AZ-700 dumps for free: <https://drive.google.com/open?id=1iFn0cb9641wyZfnXTOcGmXyzz4bP27tk>

The pass rate is 98.95% for the AZ-700 training materials, and most candidates can pass the exam just one time. We ensure you that you will refund your money if you fail to pass the exam. In addition, we offer you free update for one year, and the update version for the AZ-700 exam dumps will be sent to your email automatically, so that you can know the latest information about the AZ-700 ExamDumps. We provide you with the online chat service, and in the process of learning, if you have any questions about the AZ-700 exam dumps, you can consult us.

The AZ-700 exam covers a wide range of topics related to Azure networking, including virtual network design, network security, traffic management, and hybrid networking. It tests candidates' abilities to design and implement secure and scalable networking solutions that meet the needs of their organizations. AZ-700 Exam includes a mix of multiple-choice and scenario-based questions, and candidates have three hours to complete it.

**Pass Guaranteed First-grade Microsoft AZ-700 - Designing and**

## Implementing Microsoft Azure Networking Solutions Practical Information

The pass rate is 98.65% for AZ-700 study guide, and you can pass the exam just one time. In order to build up your confidence for the exam, we are pass guarantee and money back guarantee. If you fail to pass the exam by using AZ-700 exam braindumps of us, we will give you full refund. Besides, AZ-700 learning materials are edited and verified by professional specialists, and therefore the quality can be guaranteed, and you can use them at ease. We have online and offline service. If you have any questions for AZ-700 Exam Materials, you can consult us, and we will give you reply as quick as possible.

Achieving the Microsoft AZ-700 certification demonstrates a high level of proficiency in Azure networking and provides a competitive advantage in the job market. It is recognized by IT professionals and employers worldwide as a valuable credential that validates the skills and expertise of professionals in Azure networking. Designing and Implementing Microsoft Azure Networking Solutions certification also provides access to Microsoft resources and community, allowing individuals to stay up-to-date with the latest trends and developments in the field of Azure networking.

## The Process of Configuring Microsoft AZ-700 Exam

Microsoft has developed a practice test software for the Microsoft AZ-700 certification exam. The chance of failure is increased when a candidate does not use a study guide to prepare for the exam. The Microsoft Certification Practice Exam software was created to provide a preview of what to expect on the AZ-700 certification exam. It can also be used as an actual test with our real question bank. Hard skills that are required of an individual to be successful for this certification are covered in the exam software. A person can be certified for this certification if they have passed the practice test software. The practice test software is self-paced and does not require any specific skills or knowledge. Local libraries, employers, or community colleges are great resources for locating these products. To be successful on the certification exam an individual must have specific skills. An individual does not have to study the entire time they are preparing for this exam because this software will help them to understand what is required of them. Blocks of time should be set aside for studying with the practice test software.

The practice test software requires a person to have at least twelve-hundred hours of experience with Microsoft technologies. An individual pursuing this certification should have a good understanding of the areas that will be covered in the exam. Method and /or a study guide must be used to prepare for the exam. Experience is required in understanding how to use Microsoft products for the test. Understanding the role, scope, and process of configuration management will assist an individual in being successful. ASG and Azure are fundamental to the exam. Microsoft Certification Practice Exam software is used to prepare for the exam. **Microsoft AZ-700 Dumps** will help an individual to be more confident and prepared when taking the exam. Introduction to the exam, understanding roles and responsibilities and Microsoft Azure Automation and Desired State Configuration (DSC), the practice test software is used to prepare for the exam. Sets of questions are provided with each completion of the practice test software. The questions are based on real exam scenario, so it is important an individual understands these scenarios. The individual must know how to use the steps in completing the exam correctly.

## Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q298-Q303):

### NEW QUESTION # 298

#### Task 3

You need to ensure that hosts on VNET1 and VNET2 can communicate. The solution must minimize latency between the virtual networks.

#### Answer:

Explanation:

See the Explanation below for step by step instructions.

Explanation:

To ensure that hosts on VNET1 and VNET2 can communicate with minimal latency, you can use Virtual Network Peering. This method connects the two virtual networks directly through the Microsoft backbone network, ensuring low-latency and high-bandwidth communication.

Step-by-Step Solution

Step 1: Set Up Virtual Network Peering

- \* Navigate to the Azure Portal.
- \* Search for "Virtual networks" and select VNET1.
- \* In the left-hand menu, select "Peerings" under the "Settings" section.
- \* Click on "Add" to create a new peering.
- \* Enter the following details:

- \* Name: Enter a name for the peering (e.g., VNET1-to-VNET2).
- \* Peer virtual network: Select VNET2.
- \* Allow virtual network access: Ensure this is enabled.
- \* Allow forwarded traffic: Enable if needed.
- \* Allow gateway transit: Enable if needed.
- \* Click on "Add".

Step 2: Configure Peering on VNET2

- \* Navigate to VNET2 in the Azure Portal.
- \* In the left-hand menu, select "Peerings" under the "Settings" section.
- \* Click on "Add" to create a new peering.
- \* Enter the following details:
- \* Name: Enter a name for the peering (e.g., VNET2-to-VNET1).
- \* Peer virtual network: Select VNET1.
- \* Allow virtual network access: Ensure this is enabled.
- \* Allow forwarded traffic: Enable if needed.
- \* Allow gateway transit: Enable if needed.
- \* Click on "Add".

Explanation:

- \* Virtual Network Peering: This feature connects two virtual networks in the same or different regions, allowing resources in both networks to communicate with each other as if they were part of the same network. The traffic between peered virtual networks uses the Microsoft backbone infrastructure, ensuring low latency and high bandwidth<sup>12</sup>.
  - \* Allow Virtual Network Access: This setting ensures that the virtual networks can communicate with each other.
  - \* Allow Forwarded Traffic: This setting allows traffic forwarded from a network security appliance in the peered virtual network.
  - \* Allow Gateway Transit: This setting allows the peered virtual network to use the gateway in the local virtual network.
- By following these steps, you can ensure that hosts on VNET1 and VNET2 can communicate with minimal latency, leveraging the high-speed Microsoft backbone network.

## NEW QUESTION # 299

Hotspot Question

You have an Azure load balancer that has the following configurations:

- Name: LB1
- Location: East US 2
- SKU: Standard
- Private IP address: 10.3.0.7
- Load balancing rule: rule1 (Tcp/80)
- Health probe: probe1 (Http/80)
- NAT rules: 0 inbound

The backend pool of LB1 has the following configurations:

- Name: backend1
- Virtual network: Vnet2
- Backend pool configuration: NIC
- IP version: IPv4
- Virtual machines: VM1, VM2, VM3

You have an Azure virtual machine named VM4 that has the following network configurations:

- Network interface: vm4981
- Virtual network/subnet: Vnet3/Subnet3
- NIC private IP address: 10.4.0.4
- Accelerated networking: Enabled

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Yes

In order to add VM4 to LB1, you must create a new backend pool that includes VM4's network interface (vm4981) in Vnet3/Subnet3.

Box 2: Yes

VM1 is a part of the backend pool "backend1" which is associated with the virtual network Vnet2.

Box 3: No

The load balancing rule "rule1" is configured to load balance traffic on TCP port 80, not HTTPS (TCP port 443). Therefore, connections to https://10.3.0.7 will not be load balanced by LB1.

### NEW QUESTION # 300

You have an Azure subscription that contains the Azure app service web apps show in the following table:

You need to deploy Azure Traffic Manager. The solution must meet the following requirements:

\* Traffic to https://www.fabrikam.com must be directed to App1eu.

\* If App1eu becomes unresponsive, all the traffic to https://www.fabrikam.com must be directed to App1us.

You need to implement Traffic Manager to meet the requirements.

Which two resources should you create? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a TXT record in a DNS domain named fabrikam.com
  - B. a real user measurements key in Traffic Manager
  - C. a Traffic Manager profile that uses the priority routing method
  - D. a Traffic Manager profile that uses the geographic routing method
- C a CNAME record in a DNS domain named fabrikam.com

**Answer: A,C**

### NEW QUESTION # 301

You have an Azure environment shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/vpn-gateway/vpn-gateway-peering-gateway-transit?toc=/azure/virtual-network/toc.json>

<https://docs.microsoft.com/en-ca/azure/virtual-network/ip-services/ipv6-overview#capabilities>

### NEW QUESTION # 302

You need to restrict traffic from VMScaleSet1 to VMScaleSet2. The solution must meet the virtual networking requirements.

What is the minimum number of custom NSG rules and NSG assignments required? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

It's rule for the

**Answer:**

Explanation:

Explanation:

Box 2: One NSG

The minimum requirement is one NSG. You could attach the NSG to VMScaleSet1 and restrict outbound traffic, or you could attach the NSG to VMScaleSet2 and restrict inbound traffic. Either way you would need two custom NSG rules.

Box 1: Two custom rules

With the NSG attached to VMScaleSet2, you would need to create a custom rule blocking all traffic from VMScaleSet1. Then you would need to create another custom rule with a higher priority than the first rule that allows traffic on port 443.

The default rules in the NSG will allow all other traffic to VMScaleSet2.
