MB-820更新版、MB-820日本語版参考資料

MicrosoftのMB-820試験準備は、テストヒット率が高いため、98%~100%の合格率です。したがって、当社のMB-820学習教材は効果的であるだけでなく、有用でもあります。誰もが知っているように、時間は誰にとっても非常に重要です。一部の候補者は、自分の仕事や家族で非常に忙しいです。MB-820試験の審査に時間をかけることは非常に困難です。ただし、MB-820試験の教材を使用する場合、学習する時間はほとんどなく、Microsoft Dynamics 365 Business Central Developer合格率は高くなります。MB-820学習教材はあなたの信頼に値します。

## Microsoft Dynamics 365 Business Central Developer 認定 MB-820 試験問題 (Q36-Q41):

### 質問 # 36

You need to improve performance when ticketAPI is used to analyze the POS data. What should you do?

- A. Enable read scale-out on the Business Central database.
- B. Set the AccessByPermission property to Read on the ticketAPI API page.
- C. Set the ODataReadOnlyGetEnabled parameter to True in the Business Central admin center.
- D. Set the DataAccessIntent property to ReadOnly on the ticketAPI API page.

正解: A

解説:

Read Scale-Out:

Read scale-out is a feature in Business Central that allows you to improve performance by distributing read-only queries (such as the ones from the ticketAPI) across multiple read replicas in the cloud database. This reduces the load on the primary database and helps improve the response time for read-intensive operations, like analyzing POS data through the ticketAPI.

Data Access Intent - ReadOnly:

When enabling read scale-out, you can configure the DataAccessIntent property of APIs to be ReadOnly. This directs the system to use read replicas to handle read-only queries, which enhances performance by offloading such queries from the primary database.

Why Not Other Options?

Option A (ODataReadOnlyGetEnabled): This parameter is unrelated to read scale-out and primarily affects OData services behavior, not API performance tuning.

Option B (AccessByPermission): Setting the permission to Read does not directly affect the performance. It only controls access based on user permissions.

Option D (DataAccessIntent ReadOnly): While setting this property to ReadOnly helps in read-only operations, enabling read scale-out (option C) ensures the underlying infrastructure is optimized to handle such read operations, which is the fundamental action required.

Reference Documentation:

Read Scale-Out in Business Central

Data Access Intent in AL

Topic 3, Fabrikam Inc

Company background and technical environment

Current environment

Fabrikam Inc. is a medium-sized company that plans to implement Dynamics 365 Business Central as an ERP system. The company has a development department that will help with the ERP implementation.

Most employees work remotely from different countries or regions and speak different languages. The various locations and languages cause issues with the current on-premises software.

Planned improvements

Fabrikam Inc. plans to implement new and modern software to manage the company. The company wants to use Business Central because it is cloud-based and meets all company requirements.

The company intends to improve reporting and integration functionality by using modern tools such as Power BI and APIs. To reduce the amount of information sent by email, the company plans to expose vendor information to be consumed from external users.

Technical specifications

The development department installed Visual Studio Code to create Business Central extensions so the ERP system could be customized according to company needs. All extensions must be developed for the Business Central 2024 wave 1 online version.

The development department plans to use telemetry to control the appropriate use of each new development and works directly in licensed sandbox environments supplied by Microsoft.

The following departments at Fabrikam Inc. have multiple requirements:

\* Development

\* Control

\* Accounting

#### \* Quality

##### Development department

The development department designed an extension for the purchase department. Because the developers plan to work with telemetry for monitoring operations, they need the Application Insights information. To accomplish this, the department must add a setting in the corresponding file.

The quality department does not want to receive any warning about the Application Insights setting when the extension is compiled.

##### Control department

The control department requires customization to Business Central by using a per-tenant extension (PTE) named Subcontract Docs. The PTE includes a table named Subcontract Documents. The table has the following fields:

- \* ID: A unique identifier
- \* Subcontract No.: Related to the standard Vendors table
- \* Description: A short description of a received document
- \* Document: A media type that has the document
- \* Comments: Comments about the document
- \* Date: When the document was imported
- \* Amount: Amount related with the imported document
- \* Posted Indicates if the document is managed

The extension must be in English - United States (ENU) and Spanish Traditional Sort (ESP) so the application can be used in both languages. The translations must be on the table, not on the page, to avoid repeating them. The control department does not want to use translation files.

The control department manager requires a brief guide for the Description and Comments fields when employees create a new record so users know what to include in the fields. The guide must disappear as soon as users add a value in the fields.

The Subcontract Documents table must be displayed on a new page named Subcontract Document List through an action from the standard Vendor page.

The Amount field, included in the Subcontract Document List, must be formatted in bold format when the record is posted (field Posted = true).

The control department also requires a report to display a list of subcontract documents named Subcontract Documents Excel List.

The report must meet the following requirements:

- \* Downloads a file only in Microsoft Excel.
- \* Includes a predefined format with two worksheets; one with the posted subcontract documents and another with the unposted subcontract documents.

##### Accounting department

The accounting department plans to use Power BI to analyze information generated by the control department. The accounting department plans to expose an API named API Customer Lines. To improve the performance, the API must use read-only information and work with a Query object to summarize the data.

The accounting department must expose data such as the following.

The qty column must be the sum of the Outstanding quantity field of Sales Order Lines. It must be in descending order by quantity.

The department also exposes a page named Fabrikam Vendor API that includes vendor information from the Vendor table, such as number and name. The API must use the replica database to improve performance.

Because Fabrikam Inc. is based in multiple countries and regions, the company periodically must send accounting movements between two dates to the local tax offices named Fabrikam Accounting.

The format for this file must be an XML file generated by an XMLport object. For security reasons, it is not possible to receive data from this XMLport.

The department has a version 1.0.0.1 installed for an extension named Quality Control. The department develops a new version 1.0.0.2 and uses a codeunit with the subtype Upgrade to update it. The department requires the values for AppVersion and DataVersion on the tnaer OnUoaradePerCompany after using NavAocGetCurrentModuleInformation.

The generated XML file must have a schema like this:

##### Quality department

The quality department requires that every new app or extension is designed to meet standard company guidelines. The quality department plans to follow the standard Business Central data model. The quality development must be able to use triggers correctly.

The department must ensure that when a vendor is deleted, the system also removes each record in the Subcontract Documents table related to the vendor. If the subcontract document record has the field Posted = false, it must not be possible to delete the record.

#### 質問 # 37

You need to implement the Issue Management module and expose the PostIssue method.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: Note than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

正解:

解説:

Explanation:

Here is the most logical sequence of actions for implementing the Issue Management module in Business Central and exposing the PostIssue method:

Correct Order:

- \* Create a codeunit named "Issue Management Impl." and set the value of Access property to Internal.
- \* This is the first step because Issue Management Impl. is the implementation layer where the actual business logic resides, and setting it to Internal ensures that it is only accessible from within the module, following best practices in encapsulation.
- \* Create a local procedure named PostIssueImpl in the "Issue Management Impl." codeunit.
- \* This step adds the actual PostIssueImpl method, which contains the core logic of posting an issue.
- \* Create a codeunit named "Issue Management" and set the value of Access property to Public.
- \* After defining the implementation logic, you need to create a public-facing Issue Management codeunit to expose the service externally.
- \* Create a PostIssue procedure in the "Issue Management" codeunit, and in it call the PostIssueImpl method.
- \* Lastly, expose the PostIssue method in the Issue Management codeunit, which will internally call the PostIssueImpl method, completing the chain.

### 質問 # 38

You need to call the Issue API action from the mobile application.

Which action should you use?

- A. [POST/issues \(88122e0e-5796-ec11-bb87-000d3a392eb5\)/Microsoft.NAV.Copy](#)
- B. [PATCH /issues {88122 eOe-5796-ed 1 -bb87-000d3a392eb5\)/Mkrosotl.NAV.Copy](#)
- C. [POST /issues \(88122e0e-5796-ec11 -bb87-000d3a392eb5\)/Copy](#)
- D. [POST /issues \(88122e0e-5796-ec11 -bb87-000d3a392eb5\)/copy](#)
- E. [POST/issues\(88122e0e-5796-ec11-bb87-000d3a392eb5\)/MicrosoftNAV.Copy](#)

正解: A

解説:

Topic 1, Contoso, Ltd. Contoso, Ltd. Is a sales company in the manufacturing industry. It has subsidiaries in multiple countries /regions, each with its own localization. The subsidiaries must be data-independent from each other. Contoso. Ltd. uses an external business partner to manage the subcontracting of some manufacturing items. Contoso. Ltd. has different sectors with data security between sectors required.

Contoso, Ltd. uses Business Central online as the main ERP for financial. sales, purchase, warehouse, and manufacturing processes. It has employees that use the Business Central web application and external applications. The company has a custom external mobile app under development The IT department and its partners installed custom extensions to satisfy the company's requirements where the functionality is not available natively.

Contoso. Ltd. interacts with external services provided by customers and partners. Different applications interact with SOAP and OData endpoints exposed from Business Central.

An external business partner of Contoso, Ltd exposed a REST API for receiving details about new subcontracting orders and for sending the planned release date of each subcontracting order received.

Contoso. Ltd. has not activated the monitoring of the tenant and has no internal telemetry for its apps.

Custom reporting must be created to meet the requirements of the different departments.

Contoso, Ltd. has the following tenant management considerations:

IT department

- \* The IT department requires the ability to monitor the tenant to prevent performance problems and detect possible anomalies.
- \* The IT department plans to use Azure Application Insights and Log Analytics to inspect the ingested telemetry signals.
- \* All tenant upgrades are automatically handled by Microsoft. The IT department does not check for update availability or for tenant-related notifications.
- \* The IT department has not configured the receipt of tenant-related notifications from the Business Central admin center.

External business partner

- \* The external business partner must add custom telemetry to an application created for Contoso. Ltd. to monitor a business

process.

\* Custom telemetry signals for the application must be visible only on the partner's telemetry.

SOAP

\* Contoso, Ltd. plans to dismiss using the SOAP protocol for integrations.

\* Contoso, Ltd. must be able to detect if external applications are using its Business Central SOAP endpoints.

Issue

The Business Central tenant is upgraded by Microsoft to a new major version during the night.

Users report that one of the Contoso, Ltd. extensions disappeared from the tenant. The IT department confirms that the extension is still published.

Contoso, Ltd. plans to create a custom mobile application that has the following requirements:

\* The app must be used by employees to check item details from the ERP in real time and to report issues that occur during the manufacturing process.

\* An AL extension must be created for handling archived issues.

\* Business Central development guidelines must be followed when implementing modules.

\* A module must be implemented for the reporting and tracking of issues information. You plan to call this module Issue Management. The module must expose a method named Postlude.

\* Code modifications will be required over time.

\* The Issue Management process must be split into two extensions:

o ISSUE BASE: main extension

o ISSUE EXT: second extension with dependency from ISSUE BASE

\* In the version 1.0.0.0 of the ISSUE BASE extension, you plan to create an Issue table that contains a global Decimal variable named Issue Total.

\* In the version 1.0.0.0 of the ISSUE BASE extension, you plan to define a table named Issue Category with a Description field defined as follows:

field (2; Description; Text[SG])

{

DataClassification \* CustomerContent;

>

\* The Issue table defined in ISSUE BASE extension contains a Clone procedure defined as follows:

procedure Clone () begin end;

\* In the ISSUE EXT extension, you create a table extension object of the Issue table.

\* The table extension object of the Issue table must access the Issue Total: Decimal variable.

After weeks of usage, you discover that you must remove the Description field and the Clone procedure because they are no longer required.

In a new version of the ISSUE BASE extension, you create a new Issue Type table. You must move data row by row from a previously obsolete Issue Category table to the new Issue Type table. Because a large amount of data must be moved, you must write an Upgrade codeunit by using the DataTransfer object.

The IT department creates a custom API for exposing the custom Issue table. The API provides an action for copying an issue to a new table. The action is defined as follows:

(Service Enabled)

procedure Copy (vary action Context: WebServiceActionContext)

begin

end;

Contoso, Ltd. must create an API in Business Central to expose item details to the mobile application.

\* The API must have the lowest possible impact on the production environment when used during working hours.

\* The API must only support Get operations.

A user of the ISSUE BASE extension in Business Central reports a problem.

To debug the problem, snapshot debugging with the following configuration was activated:

□ You discover that the debugging is not triggering.

Contoso, Ltd. must connect Business Central to the external API provided by the business partner. This will be used for the partner to send the details of new subcontracting orders to fulfill the sales demand, and for receiving the planned release date of each order sent. The integration requirements are as follows:

\* The business partner will provide a REST API secured with basic authentication. Credentials to access the API will be shared with Contoso, Ltd.

\* The API for sending subcontracting orders must be called by sending an authenticated POST request to the given endpoint.

\* The API for retrieving the order no. and planned release date of each subcontracting order responds with the following JSON:

□ Each order no. must be retrieved.

A company is implementing Business Central.

The company has the following requirements for a report:

- \* The report must be loaded for users in a specific location only.
- \* Data entered in the request page must be validated before any further processing.
- \* A filter must be defined for users based on the Department field defined in user setup.

You need to implement the given requirements.

Which triggers should you use? To answer, move the appropriate triggers to the correct requirements. You may use each trigger once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

正解:

解説:

Explanation:

- \* Load the report for users in a specific location: OnInitReport
- \* Validate data before processing: OnPreReport
- \* Define filter based on Department field: OnPreDataItem

The requirements for the report are:

- \* The report must be loaded for users in a specific location only.
- \* Data entered in the request page must be validated before any further processing.
- \* A filter must be defined for users based on the Department field defined in user setup.

Trigger Matching:

- \* The report must be loaded for users in a specific location only. The correct trigger for loading the report is OnInitReport.
- \* This trigger runs when the report is initialized, and you can use it to define user-specific loading conditions, like location-based filtering.
- \* Data entered in the request page must be validated before any further processing. The correct trigger for validation before processing is OnPreReport.
- \* This trigger occurs before the report is run and can be used for data validation before further processing begins.
- \* A filter must be defined for users based on the Department field defined in user setup. The correct trigger to define filters is OnPreDataItem.
- \* This trigger occurs before data item processing begins and is used to apply filters such as those based on the Department field in the user setup.

#### 質問 # 40

A company plans to integrate tests with its build pipelines.

The company has two Docket sandbox environments: SandboxA and SandboxB.

You observe the following:

- \* SandboxA is configured without the Test Toolkit installed.
- \* SandboxB must be configured from scratch. The Test Toolkit must be installed in SandboxB during configuration.

You need to configure the sandbox environments.

How should you complete the cmdlets? To answer, select the appropriate options in the answer area.

正解:

解説:

#### 質問 # 41
