प्रमाणपत्र / CERTIFICATE
OF
CONFORMITY OF PRODUCTION (CoP) FOR THE YEAR 2024-25
FOR
COMPLIANCE TO MASS EMISSION & SMOKE NORMS
FOR DIESEL GENSET ENGINE (up to 800 kW)

M/s. Greaves Cotton Ltd.
Industrial Engine Unit,
Plot no J-2/A, MIDC Chikalthana,
Aurangabad – 431210

1. Based on the verification of documents & trials conducted on engine model "6G11TAG44" (Family F254) manufactured by M/s. Greaves Cotton Ltd., and randomly selected from their Aurangabad plant, it is certified that the following diesel genset engine models of family F254 complies with the provisions of Verification of the Conformity of Production (CoP) as per "System and Procedure For Compliance to Revised Emission Standards (dated 03-Nov-2022) for Power Generating Set Engines Up-to Gross Mechanical Power 800 KWs" published by CPCB and Environment (Protection) Third Amendment Rules, 2022 of GSR 804(E), dated 3rd November 2022 notified by Ministry of Environment, Forests and Climate Change, Govt. of India.

SAP C_S4PM_2504 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">SAP Activate Methodology: This section of the exam measures skills of Business Process Architects and covers the structure and practical application of SAP Activate. It includes understanding the phases of the methodology: Discover, Prepare, Explore, Realize, Deploy, and Run, and the use of supporting tools such as SAP Roadmap Viewer and SAP Best Practices. Candidates are expected to demonstrate the ability to apply this methodology to streamline cloud implementation processes and ensure agile delivery.
Topic 2	<ul style="list-style-type: none">Project ManagementOrganizational Change Management (OCM): This section of the exam measures the skills of Project Managers and covers the key principles of managing SAP cloud implementation projects, including team coordination, stakeholder communication, and change management. It evaluates the ability to lead project activities, manage expectations, and handle resistance during digital transformation. Emphasis is placed on aligning organizational goals with implementation strategies to ensure effective user adoption and project success.
Topic 3	<ul style="list-style-type: none">SAP S4HANA Cloud Public Edition Implementation: This section of the exam measures the skills of Implementation Consultants and covers the foundational aspects of deploying SAP S4HANA Cloud Public Edition in a business environment. It focuses on understanding system architecture, scope definition, and the technical and functional setup required for a successful implementation. The candidate is expected to have a strong grasp of how to execute the necessary configuration and adoption tasks that align with customer-specific requirements.

SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Sample Questions (Q40-Q45):

NEW QUESTION # 40

What does the Side-by-Side extensibility option mean?

- A. SAP S/4HANA extensions are context-aware and focused on tight integration.
- B. Extending SAP S/4HANA using SAP ABAP Development Workbench.
- C. There are two SAP S/4HANA instances: one for standard code and another for custom developments.
- D. Extend SAP S/4HANA using APIs published on SAP Business Accelerator Hub.**

Answer: D

NEW QUESTION # 41

How is SAP's organizational change management framework connected with the SAP Activate methodology?

Note: There are 2 correct answers to this question.

- A. The SAP Activate phases build the dimensions of the organizational change management framework.
- B. Each change management dimension is assigned to a specific SAP Activate phase.
- C. Some change management activities are executed in more than one SAP Activate phase.**
- D. The start of each change management activity is assigned to one specific SAP Activate phase.**

Answer: C,D

Explanation:

SAP's Organizational Change Management (OCM) framework is tightly integrated with the SAP Activate methodology to ensure effective adoption of SAP S/4HANA Cloud Public Edition. The connection between OCM and SAP Activate is structured to align change management with project phases.

* Option A: Each change management dimension is assigned to a specific SAP Activate phase.

Incorrect. OCM dimensions (e.g., strategy, leadership, realization) span multiple phases, not one specific phase. The SAP

S/4HANA Cloud OCM Guide states, "OCM dimensions are applied across the SAP Activate phases, not confined to a single phase."

* Option B: The SAP Activate phases build the dimensions of the organizational change management framework. Incorrect. The OCM dimensions are predefined and independent, not built by SAP Activate phases. The SAP Activate Methodology Guide notes, "The OCM framework's dimensions are established to support SAP Activate, but the phases do not define the dimensions."

* Option C: The start of each change management activity is assigned to one specific SAP Activate phase. Correct. Each OCM activity has a defined starting point within a specific SAP Activate phase, ensuring alignment with project milestones. The SAP S/4HANA Cloud OCM Guide explains, "Change management activities are mapped to specific SAP Activate phases, with clear starting points to ensure timely execution, such as stakeholder analysis in the Prepare phase."

* Option D: Some change management activities are executed in more than one SAP Activate phase.

Correct. Activities like communication or training span multiple phases to sustain engagement. The SAP Activate Methodology Guide confirms, "Certain change management activities, such as stakeholder engagement and communication, are executed across multiple SAP Activate phases to maintain momentum and support adoption." Extract from Official Documentation:

* SAP S/4HANA Cloud OCM Guide (SAP Help Portal, <https://help.sap.com>): "The OCM framework integrates with SAP Activate by assigning the start of each change management activity to a specific phase, while some activities, like communication, extend across multiple phases to ensure continuous engagement."

* SAP Activate Methodology Guide (SAP Community, <https://community.sap.com>): "Change management activities are aligned with SAP Activate phases, with defined starting points for each activity and some activities spanning multiple phases to support sustained adoption." Additional Context:

The integration of OCM with SAP Activate ensures that change management is proactive and iterative, aligning with the agile nature of cloud implementations. This structured yet flexible approach maximizes user adoption and project success.

NEW QUESTION # 42

What have SAP S/4HANA Cloud Business Workflows been designed for? Note: There are 3 correct answers to this question.

- A. To create cross-product workflow procedures
- B. To create standard procedures from SAP Signavio Process Navigator
- C. To create very simple release or approval procedures
- D. To create business processes with a high number of people involved in a pre-defined sequence
- E. To create complex, repeated work processes with iterative cycles

Answer: C,D,E

NEW QUESTION # 43

What defines the organizational entities that are required in SAP Central Business Configuration? Note: There are 2 correct answers to this question.

- A. System consistency checks
- B. Added partner content
- C. The selected scope
- D. The selected deployment target

Answer: C,D

Explanation:

SAP Central Business Configuration (CBC) is a tool used to configure the organizational structure and scope for SAP S/4HANA Cloud Public Edition. The definition of organizational entities depends on specific inputs during the configuration process.

* Option A: The selected scope is correct. The selected scope determines which business processes and organizational entities (e.g., company codes, plants) are required. The scope defines the functional areas to be implemented, which directly influences the organizational structure configured in CBC. SAP's documentation on CBC emphasizes that scoping decisions drive the creation of organizational entities.

* Option B: The selected deployment target is correct. The deployment target (e.g., specific system or tenant) influences the configuration of organizational entities, as it defines where the configuration will be applied. CBC uses the deployment target to ensure that entities are aligned with the target system's requirements, as per SAP's implementation guidelines.

- * Option C: Added partner contentIncorrect. Partner content may enhance functionality but does not directly define the organizational entities required in CBC. Entities are primarily determined by scope and deployment decisions.
- * Option D: System consistency checksIncorrect. System consistency checks validate configurations but do not define the organizational entities. They ensure that the configured entities are consistent with SAP standards.
- :
- SAP Central Business Configuration Documentation: Details the role of scope and deployment target in defining organizational entities (<https://help.sap.com>).
- SAP S/4HANA Cloud Public Edition Implementation Guide: Explains CBC configuration processes.
- SAP Activate Methodology: Highlights scoping and deployment as key configuration drivers.

NEW QUESTION # 44

Which of the following would prevent SAP from running a Post-Upgrade Test (PUT) on a customer's behalf?

Note: There are 2 correct answers to this question.

- A. The process steps have been reordered.
- B. An execution variant has not been maintained.
- C. The test process failed the execution pre-check.
- D. Data marked for deletion is picked for execution.

Answer: B,C

Explanation:

Post-Upgrade Tests (PUT) are automated tests conducted by SAP after a release upgrade in SAP S/4HANA Cloud Public Edition to ensure system stability and functionality. Certain conditions can prevent SAP from executing these tests on the customer's behalf, as they require specific prerequisites to be met.

* Option A: The process steps have been reordered. Incorrect. Reordering process steps may affect business processes but does not inherently prevent SAP from running PUT. The SAP S/4HANA Cloud Testing Guide states, "Post-Upgrade Tests focus on standard functionality and are not impacted by custom process step reordering, provided the core system configuration remains intact."

* Option B: The test process failed the execution pre-check. Correct. The execution pre-check validates whether the system is ready for PUT, including system configuration and data consistency. If the pre-check fails, SAP cannot proceed with the test. According to the SAP S/4HANA Cloud Public Edition Implementation Guide, "A failed execution pre-check, such as missing configurations or system errors, will prevent SAP from initiating Post-Upgrade Tests."

* Option C: An execution variant has not been maintained. Correct. Execution variants define the scope and parameters for PUT, such as specific processes or data sets to test. Without a maintained execution variant, SAP cannot execute the test. The SAP Testing Documentation notes, "Maintaining an execution variant is a prerequisite for Post-Upgrade Tests, as it specifies the test scope and ensures accurate execution."

* Option D: Data marked for deletion is picked for execution. Incorrect. Data marked for deletion may cause issues in business processes but does not prevent PUT execution, as tests focus on standard functionality. The SAP S/4HANA Cloud Study Guide clarifies, "PUT focuses on validating system integrity post-upgrade, and data marked for deletion is typically excluded from test scenarios." Extract from Official Documentation:

* SAP S/4HANA Cloud Public Edition Implementation Guide (SAP Help Portal, <https://help.sap.com>):

"Post-Upgrade Tests require a successful execution pre-check to ensure system readiness. Additionally, execution variants must be maintained to define the test scope, without which SAP cannot proceed with automated testing."

* SAP Testing Documentation (SAP Help Portal): "The execution pre-check validates system prerequisites, and an execution variant specifies the test parameters. Failure to meet these conditions prevents Post-Upgrade Test execution." Additional Context: PUT is part of SAP's commitment to maintaining system reliability in the cloud environment. The execution pre-check and variant maintenance are critical to ensure tests are relevant and executable, aligning with SAP's standardized testing framework. Customers must prepare their systems accordingly to enable SAP to perform these tests.
