## Overcome Exam Anxiety with Trend Deep-Security-Professional Dumps

The Trend Micro Certified Professional for Deep Security certification can smoothen up your way into growing a career, but passing the Trend Micro Certified Professional for Deep Security Exam of this certification is not as easy as you may imagine. A lot of people failed on passing this Trend Micro Certified Professional for Deep Security Deep-Security-Professional exam, forcing them to redo the whole process. Not only that it will be a waste of time, but it also can be a waste of money due to the costly Trend Micro Certified Professional for Deep Security exam registration fee. But no worries as Certshero have real **Deep-Security-Professional Exam Questions** to help you counter exam anxiety.

### Information about Trend Deep-Security-Professional Exam

Vendor: Trend

Exam Code: Deep-Security-Professional

P.S. Free & New Deep-Security-Professional dumps are available on Google Drive shared by iPassleader:  
[https://drive.google.com/open?id=1HBfPUe2W8mtk\\_yjncfx13bzBqGY6he3I](https://drive.google.com/open?id=1HBfPUe2W8mtk_yjncfx13bzBqGY6he3I)

One of the advantages of the Deep-Security-Professional training test is that we are able to provide users with free pre-sale experience, the Deep-Security-Professional study materials pages provide sample questions module, is mainly to let customers know our part of the subject, before buying it, users further use our Deep-Security-Professional Exam Prep. At the same time, it is more convenient that the sample users we provide can be downloaded PDF demo for free, so the pre-sale experience is unique. So that you will know how efficiency our Deep-Security-Professional learning materials are and determine to choose without any doubt.

It is exceedingly helpful in attaining a suitable job when qualified with Deep-Security-Professional certification. It is not easy to get the Deep-Security-Professional certification, while certified with which can greatly impact the future of the candidates. Now, please take Deep-Security-Professional practice dumps as your study material, you will pass your exam with Deep-Security-Professional practice materials successfully. Deep-Security-Professional free demo is available for everyone. Our Deep-Security-Professional practice dumps are extremely detailed and complete in all key points which will be in the real test. Believe us and you can easily pass by our Deep-Security-Professional practice dumps.

## iPassleader Trend Deep-Security-Professional Exam Questions are Ready for Quick Download

Boring life will wear down your passion for life. It is time for you to make changes. Our Deep-Security-Professional study materials are specially prepared for you. In addition, learning is becoming popular among all age groups. After you purchase our Deep-Security-Professional study materials, you can make the best use of your spare time to update your knowledge. When your life is filled with enriching yourself, you will feel satisfied with your good change. Our Deep-Security-Professional Study Materials are designed to stimulate your interest in learning so that you learn in happiness.

## Trend Micro Certified Professional for Deep Security Sample Questions (Q80-Q85):

### NEW QUESTION # 80

An administrator enables Multi-Tenancy in Deep Security and creates multiple tenants. After a period of time, the administrator would like to review the usage and resource consumption by a specific tenant. How can the administrator retrieve this information?

- A. The administrator could check the Multi-Tenancy log file for resource consumption details.
- B. The administrator could generate a Tenant report from within the Deep Security Manager Web console.
- C. The administrator will not be able retrieve this information without licensing and enabling the Multi-Tenancy Chargeback module in the Deep Security Manager Web console.
- D. The administrator downloads the Tenant usage details from the Deep Security Agent on the Tenant computer.

**Answer: B**

Explanation:

Usage and resource consumption for a tenant can be reviewed by generating tenant usage/chargeback reports directly in the Deep Security Manager Web console.

Option A is incorrect; the log file does not contain usage stats.

Option C is incorrect; no extra licensing is required for basic reporting.

Option D is incorrect; usage reports are generated in the manager, not on the agent.

### NEW QUESTION # 81

Which of the following statements is true regarding the use of the Firewall Protection Module in Deep Security?

- A. The Firewall Protection Module can check files for certain characteristics such as compression and known exploit code.
- B. The Firewall Protection Module can detect and block Cross Site Scripting and SQL In-jection attacks.
- C. The Firewall Protection Module can prevent DoS attacks coming from multiple systems.
- D. The Firewall Protection Module can identify suspicious byte sequences in packets.

Answer: C

### NEW QUESTION # 82

Which of the following statements is true regarding Deep Security Relays?

- A. Deep Security Agents communicate with Deep Security Relays to obtain security updates.
- B. Deep Security Relays are able to process Deep Security Agent requests during updates.
- C. Deep Security Agents promoted to Deep Security Relays no longer provide the security capabilities enabled by the Protection Modules.
- D. Both 32-bit and 64-bit Deep Security Agents can be promoted to a Deep Security Relay.

Answer: A

Explanation:

Deep Security Relays are specialized agents that distribute security updates (such as anti-malware patterns, rules, and engine updates) to other agents within the network. Regular Deep Security Agents connect to Relays to receive these updates, reducing the load on the Deep Security Manager and external bandwidth usage.

From the official documentation:

"Relays are agents that download security updates from the Trend Micro Update Server or the Deep Security Manager and then distribute these updates to other agents on the network." Option D is correct: Agents communicate with relays to obtain security updates.

Option A is incorrect: Only 64-bit agents can be promoted to relays in recent versions.

Option B is incorrect: Relays retain all protection module functions after being promoted.

Option C is partially correct but not as precise as D; relays distribute, but do not "process" requests in the sense of approving/handling agent-side logic.

### NEW QUESTION # 83

When viewing the details for a policy, as displayed in the exhibit, you notice that the Application Control Protection Module is not available. In this example, why would this Protection Modules not be available?

- A. The Application Control Protection Modules has not been enabled for this tenant.
- B. The Application Control Protection Module is only supported on Linux computers, the policy details displayed are for Windows computers only.
- C. The Application Control Protection Module has been disabled at the Base Policy level and is not displayed in the details for child policies.
- D. An Activation Code for the Application Control Protection Module has not been provided. Unlicensed Protection Modules will not be displayed.

## Answer: C

Explanation:

If a protection module (like Application Control) is disabled at the parent policy level (e.g., Base Policy), it will not be available for child policies. This is a key feature of policy inheritance: disabled modules at a higher level are not available for override or configuration in descendants.

## NEW QUESTION # 84

Which of the following operations makes use of the Intrusion Prevention Protection Module?

- A. Application traffic control
- B. Port scans
- C. Integrity scans
- D. **Stateful traffic analysis**

## Answer: D

Explanation:

The Intrusion Prevention (IPS) module performs stateful traffic analysis to detect and block exploit attempts and malicious activity in network traffic, tracking the state of network connections and analyzing packet sequences to identify threats.

From the official documentation:

"The Intrusion Prevention module analyzes network traffic using deep packet inspection and stateful traffic analysis to block known and unknown threats, including vulnerability exploits." Option D is correct.

Option A is handled by Integrity Monitoring.

Option B (port scanning) is a network reconnaissance activity and may be detected but is not a core operation of IPS.

Option C (application traffic control) is typically managed by Firewall, not IPS.
