Key Features of AVIXA CTS PDF Questions By DumpStillValid

Our CTS study practice guide takes full account of the needs of the real exam and conveniences for the clients. Our CTS certification questions are close to the real exam and the questions and answers of the test bank cover the entire syllabus of the real exam and all the important information about the exam. Our CTS learning dump can stimulate the real exam's environment to make the learners be personally on the scene and help the learners adjust the speed when they attend the real exam. To be convenient for the learners, our CTS Certification Questions provide the test practice software to help the learners check their learning results at any time.

AVIXA Certified Technology Specialist Sample Questions (Q106-Q111):

NEW QUESTION # 106

To help end users remember key points of the training, the training documentation should include

- A. a customized quick start guide.
- B. user manuals for each piece of equipment.
- C. instructions for maintaining system input devices.
- D. equipment datasheets.

Answer: A

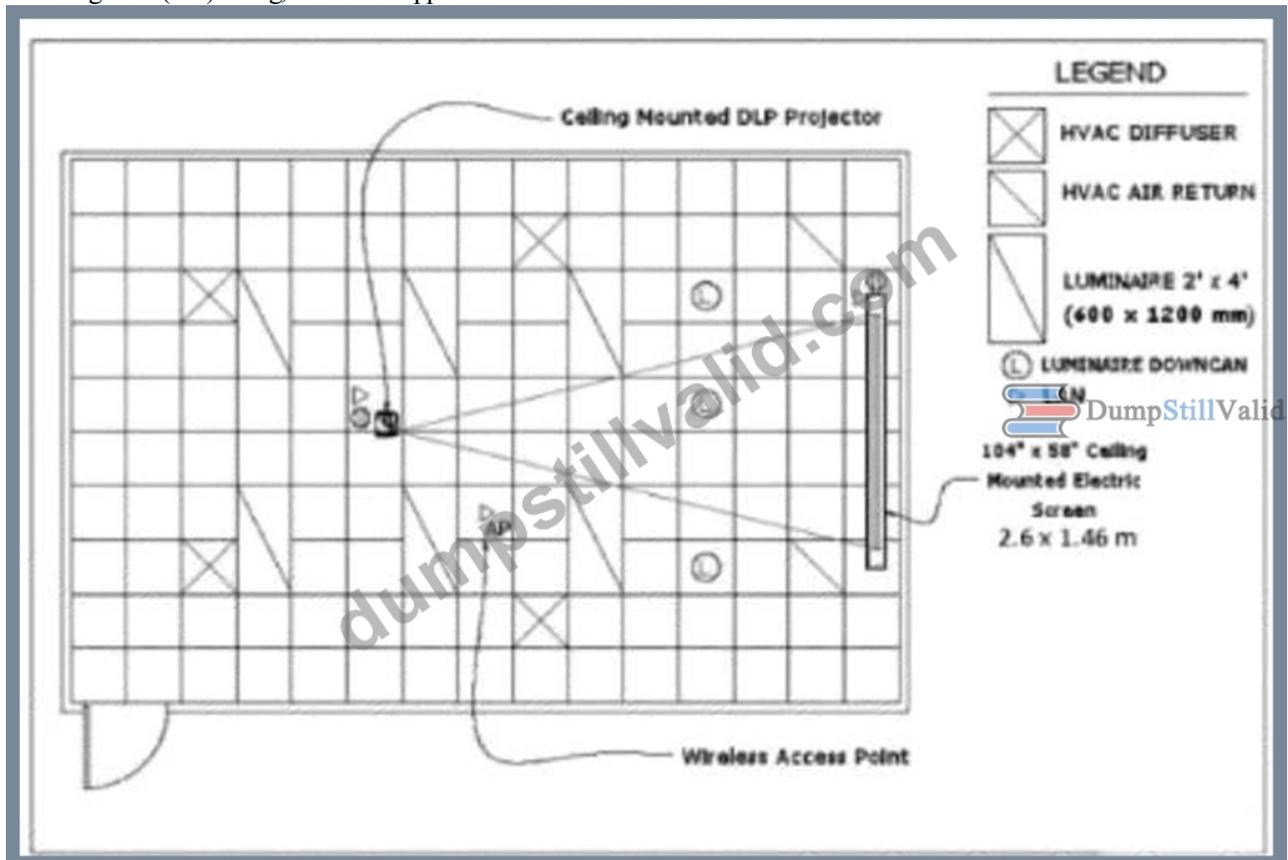

Explanation:

A customized quick start guide is particularly useful for helping end users remember key points of the training. These guides provide concise, easy-to-follow instructions tailored to the specific system and user needs, highlighting the most important operational steps and features. This helps users quickly familiarize themselves with the system and perform essential tasks without having to refer to extensive manuals.

Including visual aids, such as diagrams and screenshots, further enhances the effectiveness of the quick start guide.

NEW QUESTION # 107

Assuming a 10' (3 m) ceiling, what is the approximate volume of this room?

- A. 300 cubic ft (8.5 m³)
- B. 6000 cubic ft (162 m³)
- C. 1500 cubic ft (42.5 m³)
- D. 600 cubic ft (17 m³)

Answer: B

Explanation:

To find the volume of the room, we need to calculate the area of the floor and multiply it by the height of the ceiling. The room has a ceiling-mounted DLP projector and a 10' x 58" ceiling-mounted electric screen. Using standard room dimensions, we estimate the room's length and width to fit the equipment layout proportionally.

Assuming the room dimensions as approximately 20 feet in length and 30 feet in width:

$$\text{Volume} = \text{Length} \times \text{Width} \times \text{Height}$$

$$\text{Volume} = 20 \text{ ft} \times 30 \text{ ft} \times 10 \text{ ft} = 6000 \text{ cubic ft}$$

This calculation aligns with the provided options. References:

- * Standard Architectural Practices

NEW QUESTION # 108

Which of the following is the MOST SUITABLE security method for a small portable projector?

- A. cable lock
- B. Nylock nuts and bolts
- C. adjustable mount
- D. security screws

Answer: A

Explanation:

The most suitable security method for a small portable projector is a cable lock. Cable locks are specifically designed to secure portable devices like projectors by attaching them to a fixed object, preventing unauthorized removal. This method is both practical and effective for portable devices, as it provides a good balance of security and ease of use without requiring permanent installation or modifications to the device.

Reference: Security guidelines for portable devices, such as those provided by leading security accessory manufacturers like Kensington, highlight the effectiveness of cable locks in securing portable electronics.

NEW QUESTION # 109

Which agreement typically includes installation materials and workmanship against failure for a stipulated period after the installation is complete?

- A. System warranty
- B. Preventive warranty
- C. Service warranty
- D. Manufacturer's warranty

Answer: A

Explanation:

A system warranty is provided by the AV integrator and covers the entire installed system, including materials and workmanship, for a specified period post-installation. This ensures that any issues arising from the installation process are addressed without additional cost to the client.

NEW QUESTION # 110

In order to run three cables inside a conduit, what is the maximum percentage of a conduit's internal cross-sectional area to be considered?

- A. 60%
- B. 31%
- C. 40%
- D. 53%

Answer: C

Explanation:

When running three cables inside a conduit, the maximum allowable fill is 40% of the conduit's internal cross-sectional area. This percentage is specified to ensure that there is adequate space for pulling the cables through without causing damage and to allow for proper airflow to prevent overheating.

CTS Technology Specialist Reference

According to the CTS guidelines and National Electrical Code (NEC), conduits should not exceed 40% fill for three or more cables to ensure safety and maintain the integrity of the cables during installation and use.

NEW QUESTION # 111

.....

It is not hard to know that CTS torrent prep is compiled by hundreds of industry experts based on the syllabus and development trends of industries that contain all the key points that may be involved in the examination. Therefore, with CTS exam questions, you no longer need to purchase any other review materials, and you also don't need to spend a lot of money on tutoring classes. At the same time, CTS Test Guide will provide you with very flexible learning time in order to help you pass the exam.
