We are concerted company offering tailored services which include not only the newest and various versions of Managing-Cloud-Security practice materials, but offer one-year free updates services with patient staff offering help 24/7. So there is considerate and concerted cooperation for your purchasing experience accompanied with patient staff with amity. Their enrichment is dependable and reliable. You can find Managing-Cloud-Security practice materials on our official website we will deal with everything once your place your order.

This WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) practice exam software is easy to use. A free demo version of this format is also available to assess it before buying. It is compatible with all Windows computers. This WGU Managing-Cloud-Security Practice Test software familiarizes you with the real WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam pattern. You must have an active Internet connection to validate your product license.

WGU - Managing-Cloud-Security - WGU Managing Cloud Security (JY02) – Professional Actual Questions

You have the option to change the topic and set the time according to the actual WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam. The WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) practice questions give you a feeling of a real exam which boost confidence. Practice under real WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam situations is an excellent way to learn more about the complexity of the WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) exam dumps. You can learn from your WGU Managing Cloud Security (JY02) (Managing-Cloud-Security) practice test mistakes and overcome them before the actual Managing-Cloud-Security exam.

WGU Managing Cloud Security (JY02) Sample Questions (Q49-Q54):

NEW QUESTION # 49

A customer requests that a cloud provider physically destroys any drives storing their personal data. What must the provider do with the drives?

- A. It should use degaussing tools to securely remove any personal data from the drives.
- B. It should destroy them only if the contract includes hardware disposal insurance.
- **C. It should destroy them only if dedicated hardware disposal is specified in the contract.**
- D. It should use cryptographic erasure to securely remove any personal data from the drives.

Answer: C

Explanation:

Cloud providers typically manage multi-tenant infrastructure, where physical hardware is shared among customers. Therefore, drives are not destroyed for each customer unless explicitly required in the contract. If the customer's agreement specifies dedicated hardware disposal, then the provider must comply by physically destroying the drives.

Cryptographic erasure and degaussing are valid sanitization methods, but they may not meet the specific contractual requirement of physical destruction. Insurance clauses are unrelated to disposal.

This question underscores the importance of negotiating contractual terms in cloud agreements. Customers handling highly sensitive or regulated data may require physical destruction, while others may accept logical erasure. Clear agreements ensure both compliance and alignment of security responsibilities.

NEW QUESTION # 50

Which tool provides a dedicated environment to contain and analyze malware?

- A. Encryption
- **B. Sandbox**
- C. Gateway
- D. Controller

Answer: B

Explanation:

A sandbox is a controlled, isolated environment used to safely run, observe, and analyze potentially malicious code. In cybersecurity, sandboxes allow analysts to execute malware samples without risking contamination of production systems. This enables identification of malware behavior, persistence techniques, and indicators of compromise.

Encryption protects confidentiality, but does not allow safe execution. Gateways control traffic flow, and controllers manage devices or workloads. Only a sandbox provides the dedicated containment required for malware analysis.

In cloud environments, sandboxing is often implemented at scale to analyze suspicious files or traffic automatically. This practice enhances defenses against zero-day exploits, advanced persistent threats, and polymorphic malware. By preventing malware from escaping, sandboxes provide essential forensic and detection insights without endangering the wider environment.

NEW QUESTION # 51

A customer service representative needs to verify a customer's private information, but the representative does not need to see all the information. Which technique should the service provider use to protect the privacy of the customer?

- **A. Masking**
- B. Encryption
- C. Tokenization
- D. Hashing

Answer: A

Explanation:

Data masking is a privacy-preserving technique that replaces sensitive fields with obfuscated or partial values while retaining usability. For example, displaying only the last four digits of a Social Security Number or credit card number. This allows a representative to verify identity without accessing the full data set.

Hashing and encryption protect data at rest or in transit, but they do not allow selective partial display.

Tokenization substitutes sensitive data with unique tokens but is typically used for storage and processing rather than interactive verification. Masking, on the other hand, is specifically designed for scenarios where a user must work with limited but recognizable data.

By using masking, organizations enforce the principle of least privilege, reduce exposure of sensitive information, and align with privacy standards such as PCI DSS and GDPR.

NEW QUESTION # 52

Which group should be notified for approval when a planned modification to an environment is scheduled?

- A. Executive management board
- B. Event management team
- C. Problem management team

- **D. Change management board**

Answer: D

Explanation:

The Change Management Board (CMB), also called the Change Advisory Board (CAB), is the formal authority responsible for reviewing, assessing, and approving planned modifications to IT environments. This group ensures that proposed changes align with business objectives, do not introduce unnecessary risks, and comply with security and regulatory requirements.

Event management teams focus on monitoring events, problem management teams handle root-cause analysis, and executive boards provide strategic direction but are not operational approval authorities. Only the CMB has the explicit role of validating technical and security implications before implementation.

By involving the CMB, organizations enforce structured governance, minimize disruptions, and establish accountability. This practice is central in ITIL and ISO/IEC 20000 standards, ensuring that operational integrity and security are preserved during change cycles.

NEW QUESTION # 53

Which methodology encompasses conducting tests around the interaction of end users with new code that is intended for a patch?

- A. Nonfunctional testing
- B. Full testing
- **C. Functional testing**
- D. Tabletop testing

Answer: C

Explanation:

Functional testing validates that new or updated code performs correctly from the end user's perspective.

This type of testing ensures that the patch delivers intended results without introducing errors. It focuses on verifying user interactions, workflows, and outputs.

Full testing may cover all aspects, but it is broader than necessary. Nonfunctional testing evaluates performance, scalability, or usability, not direct functionality. Tabletop testing is a discussion-based exercise, often used for incident response.

Functional testing ensures customer satisfaction by aligning patches with expected system behavior. It is a core component of Agile and DevOps pipelines, where user experience and rapid delivery are prioritized.

NEW QUESTION # 54

.....

With all Managing-Cloud-Security practice questions being brisk in the international market, our Managing-Cloud-Security exam materials are quite catches with top-ranking quality. But we do not stop the pace of making advancement by following the questions closely according to exam. So our experts make new update as supplementary updates. So that our Managing-Cloud-Security study braindumps are always the latest for our loyal customers and we will auto send it to you as long as we update it.

Reliable Managing-Cloud-Security Test Pattern: https://www.pass4cram.com/Managing-Cloud-Security_free-download.html

Our company is your ally in achieving your targeted certification, providing you easy and interactive Managing-Cloud-Security exam braindumps, WGU Managing-Cloud-Security Actual Questions With useful content arrayed by experts and specialist we can give you full confidence to deal with it successfully, Compared with other company who allure exam candidates to buy their practice materials our Managing-Cloud-Security test guide materials are compiled and edited by experienced expert team, Besides, our colleagues always keep the updating of Managing-Cloud-Security test dumps to ensure the accuracy of questions and answers.

Don't put your edited footage back on the source tapes, Missing Album Artwork, Our company is your ally in achieving your targeted certification, providing you easy and interactive Managing-Cloud-Security Exam Braindumps.

100% Pass Quiz 2026 Newest WGU Managing-Cloud-Security: WGU Managing Cloud Security (JY02) Actual Questions

With useful content arrayed by experts and specialist Managing-Cloud-Security we can give you full confidence to deal with it successfully, Compared with other company who allure exam candidates to buy their practice materials our Managing-Cloud-Security test guide materials are compiled and edited by experienced expert team.

Besides, our colleagues always keep the updating of Managing-Cloud-Security test dumps to ensure the accuracy of questions and answers, In order to win your trust, we have developed the free demo of the Managing-Cloud-Security exam training for you.
