

Data-Cloud-Consultant 최신버전 시험 공부 자료 & Data-Cloud-Consultant 최고 덤프 공부

최신 Salesforce Health Cloud Health-Cloud-Accredited-Professional 무료 샘플 문제 (Q19-Q24):

질문 # 19

A Health Cloud administrator working on a Care Coordination project needs to change the role name 'Care Coordinator' to 'Care Consultant' to match the organizations nomenclature. Which three steps should the administrator take to ensure all Tasks identify the role 'Care Consultant'? (Choose three.)

- A. Create an ETL script to update the previously assigned To picklist values of Tasks created in the past.
- B. Update the corresponding roles in the Assigned To picklist for the Care Plan Template Task object.
- C. Update/Add the organization roles in the CarePlan_Role_Patient key:value pair in Health Cloud Setting.
- D. Update the Care Plan Record Type custom metadata type to reflect the care coordination processes specific to the Care Coordinators.
- E. Update the organization roles in the CarePlan_Role_Care_Coordinator key:value pair in Health Cloud Setting.

정답 B,C,E

질문 # 20

Which underlying object helps with sales compliance with sales agreements?

- A. Opportunities
- B. Orders
- C. Forecasts
- D. Contacts

정답 B

설명 :

Reference and details below.

Over time, you can compare planned quantities to actual quantities as orders are booked and use this insight to monitor and enforce compliance to the agreement.

질문 # 21

Which action is Possible in the program enrollment flow when adding in 'Enroll in Program' quick action to a record? (Choose three)

- A. Signing enrollment consent form
- B. Creating a new care program
- C. Selecting the provider associate with a product
- D. Starting a new blank care plan
- E. Seeing a list of all product and selecting applicable products

어떻게 하면 가장 편하고 수월하게 Salesforce Data-Cloud-Consultant 시험을 패스할 수 있을까요? 그 답은 바로 Itexamdump에서 찾아볼 수 있습니다. Salesforce Data-Cloud-Consultant 덤프로 시험에 도전해보지 않으실래요? Itexamdump는 당신을 위해 Salesforce Data-Cloud-Consultant 덤프로 Salesforce Data-Cloud-Consultant 인증 시험이라는 높은 벽을 순식간에 무너뜨립니다.

Salesforce Data-Cloud-Consultant 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • Data Ingestion and Modeling: This topic covers the different transformation capabilities within Data Cloud. It includes describing processes and considerations for data ingestion from various sources, defining, mapping, and modeling data using best practices aligned with identity resolution. Lastly, it discusses using available tools to inspect and validate ingested and modeled data.

주제 2	<ul style="list-style-type: none"> • Data Cloud Setup and Administration: This topic includes applying Data Cloud permissions, permission sets, org-wide settings. It describes and configures data stream types, and data bundles. Moreover, it discusses use cases for data spaces, creating data spaces, managing and administering Data Cloud using reports, dashboards, flows, packaging, data kits, diagnosing and exploring data using Data Explorer, Profile Explorer, and APIs.
주제 3	<ul style="list-style-type: none"> • Act on Data: This topic defines activations and their basic use cases, using attributes and related attributes, identifying and analyzing timing dependencies affecting the Data Cloud lifecycle. Additionally it focuses on troubleshooting common problems with activations, and using data actions, including their requirements and intended use cases.
주제 4	<ul style="list-style-type: none"> • Segmentation and Insights: This topic defines basic concepts of segmentation and use cases, identifies scenarios for analyzing segment membership, configuring, refining, and maintaining segments within Data Cloud, and differentiating between calculated and streaming insights.
주제 5	<ul style="list-style-type: none"> • Identity Resolution: It describes matching and how its rule sets are applied. Furthermore, it discusses reconciling data and its rule sets, the results of identity resolution, and use cases.

적중율이 높은 Data-Cloud-Consultant 최신버전 시험공부자료 인증시험덤프

Itexamdump덤프공부가이드는 업계에서 높은 인지도를 자랑하고 있습니다. Itexamdump제품은 업데이트가 가장 빠르고 적중율이 가장 높아 업계의 다른 IT공부자료 사이트보다 출중합니다. Itexamdump의 Salesforce 인증 Data-Cloud-Consultant덤프는 이해하기 쉽고 모든 Salesforce 인증 Data-Cloud-Consultant 시험유형이 모두 포함되어 있어 덤프만 잘 이해하고 공부하시면 시험패스는 문제없습니다.

최신 Salesforce Data Cloud Data-Cloud-Consultant 무료 샘플문제 (Q73-Q78):

질문 # 73

A Data Cloud customer wants to adjust their identity resolution rules to increase their accuracy of matches. Rather than matching on email address, they want to review a rule that joins their CRM Contacts with their Marketing Contacts, where both use the CRM ID as their primary key.

Which two steps should the consultant take to address this new use case?

Choose 2 answers

- **A. Create a matching rule based on party identification that matches on CRM ID as the party identification name.**
- B. Map the primary key from the two systems to party identification, using CRM ID as the identification name for individuals coming from the CRM, and Marketing ID as the identification name for individuals coming from the marketing platform.
- C. Create a custom matching rule for an exact match on the Individual ID attribute.
- **D. Map the primary key from the two systems to Party Identification, using CRM ID as the identification name for both.**

정답: A,D

설명:

To address this new use case, the consultant should map the primary key from the two systems to Party Identification, using CRM ID as the identification name for both, and create a matching rule based on party identification that matches on CRM ID as the party identification name. This way, the consultant can ensure that the CRM Contacts and Marketing Contacts are matched based on their CRM ID, which is a unique identifier for each individual. By using Party Identification, the consultant can also leverage the benefits of this attribute, such as being able to match across different entities and sources, and being able to handle multiple values for the same individual. The other options are incorrect because they either do not use the CRM ID as the primary key, or they do not use Party Identification as the attribute type. References: Configure Identity Resolution Rulesets, Identity Resolution Match Rules, Data Cloud Identity Resolution Ruleset, Data Cloud Identity Resolution Config Input

질문 # 74

Cloud Kicks wants to be able to build a segment of customers who have visited its website within the previous 7 days.

Which filter operator on the Engagement Date field fits this use case?

- A. Last Number of Days
- B. Next Number of Days
- C. Greater than Last Number of
- D. Is Between

정답: A

설명:

Explanation

The filter operator Last Number of Days allows you to filter on date fields using a relative date range that specifies the number of days before today. For example, you can use this operator to filter on customers who have visited your website in the last 7 days, or the last 30 days, or any number of days you want. This operator is useful for creating dynamic segments that update automatically based on the current date¹². References:

* Relative Date Filter Reference

* Create Filtered Segments

질문 # 75

Northern Trail Outfitters (NTO) wants to send a promotional campaign for customers that have purchased within the past 6 months. The consultant created a segment to meet this requirement.

Now, NTO brings an additional requirement to suppress customers who have made purchases within the last week.

What should the consultant use to remove the recent customers?

- A. Batch transforms
- B. Related attributes
- C. Streaming insight
- D. Segmentation exclude rules

정답: D

설명:

Explanation

The consultant should use B. Segmentation exclude rules to remove the recent customers. Segmentation exclude rules are filters that can be applied to a segment to exclude records that meet certain criteria. The consultant can use segmentation exclude rules to exclude customers who have made purchases within the last week from the segment that contains customers who have purchased within the past 6 months. This way, the segment will only include customers who are eligible for the promotional campaign.

The other options are not correct. Option A is incorrect because batch transforms are data processing tasks that can be applied to data streams or data lake objects to modify or enrich the data. Batch transforms are not used for segmentation or activation. Option C is incorrect because related attributes are attributes that are derived from the relationships between data model objects. Related attributes are not used for excluding records from a segment. Option D is incorrect because streaming insights are derived attributes that are calculated at the time of data ingestion. Streaming insights are not used for excluding records from a segment. References: Salesforce Data Cloud Consultant Exam Guide, Segmentation, Segmentation Exclude Rules

질문 # 76

The recruiting team at Cumulus Financial wants to identify which candidates have browsed the jobs page on its website at least twice within the last 24 hours. They want the information about these candidates to be available for segmentation in Data Cloud and the candidates added to their recruiting system.

Which feature should a consultant recommend to achieve this goal?

- A. Streaming data transform
- B. Streaming insight
- C. Calculated insight
- D. Batch data transform

정답: B

설명:

Explanation

A streaming insight is a feature that allows users to create and monitor real-time metrics from streaming data sources, such as web and mobile events. A streaming insight can also trigger data actions, such as sending notifications, creating records, or updating fields, based on the metric values and conditions. Therefore, a streaming insight is the best feature to achieve the goal of identifying candidates who have browsed the jobs page on the website at least twice within the last 24 hours, and adding them to the recruiting system. The other options are incorrect because:

* A streaming data transform is a feature that allows users to transform and enrich streaming data using SQL expressions, such as filtering, joining, aggregating, or calculating values. However, a streaming data transform does not provide the ability to monitor metrics or trigger data actions based on conditions.

* A calculated insight is a feature that allows users to define and calculate multidimensional metrics from data using SQL expressions, such as LTV, CSAT, or average order value. However, a calculated insight is not suitable for real-time data analysis, as it runs on a scheduled basis and does not support data actions.

* A batch data transform is a feature that allows users to create and schedule complex data transformations using a visual editor, such as joining, aggregating, filtering, or appending data.

However, a batch data transform is not suitable for real-time data analysis, as it runs on a scheduled basis and does not support data actions. References: Streaming Insights, Create a Streaming Insight, Use Insights in Data Cloud, Learn About Data Cloud Insights, Data Cloud Insights Using SQL, Streaming Data Transforms, Get Started with Batch Data Transforms in Data Cloud, Transformations for Batch Data Transforms, Batch Data Transforms in Data Cloud: Quick Look, Salesforce Data Cloud: AI CDP.

질문 # 77

A consultant is reviewing a recent activation using engagement-based related attributes but is not seeing any related attributes in their payload for the majority of their segment members.

Which two areas should the consultant review to help troubleshoot this issue?

Choose 2 answers

- A. The correct path is selected for the related attributes.
- B. The activations are referencing segments that segment on profile data rather than engagement data.
- C. The related engagement events occurred within the last 90 days.
- D. The activated profiles have a Unified Contact Point.

정답: A,C

설명:

Engagement-based related attributes are attributes that describe the interactions of a person with an email message, such as opens, clicks, unsubscribes, etc. These attributes are stored in the Engagement data model object (DMO) and can be added to an activation to send more personalized communications. However, there are some considerations and limitations when using engagement-based related attributes, such as:

For engagement data, activation supports a 90-day lookback window. This means that only the attributes from the engagement events that occurred within the last 90 days are considered for activation. Any records outside of this window are not included in the activation payload. Therefore, the consultant should review the event time of the related engagement events and make sure they are within the lookback window.

The correct path to the related attributes must be selected for the activation. A path is a sequence of DMOs that are connected by relationships in the data model. For example, the path from Individual to Engagement is Individual -> Email -> Engagement. The path determines which related attributes are available for activation and how they are filtered. Therefore, the consultant should review the path selection and make sure it matches the desired related attributes and filters.

The other two options are not relevant for this issue. The activations can reference segments that segment on profile data rather than engagement data, as long as the activation target supports related attributes. The activated profiles do not need to have a Unified Contact Point, which is a unique identifier for a person across different data sources, to activate engagement-based related attributes. Reference: Add Related Attributes to an Activation, Related Attributes in Data Cloud activation have no values, Explore the Engagement Data Model Object

질문 # 78

.....

Salesforce Data-Cloud-Consultant인증시험은 전업적지식이 강한 인증입니다. IT업계에서 일자리를 찾고 계시다면 많은 회사에서는Salesforce Data-Cloud-Consultant있는지 없는지에 알고 싶어합니다. 만약Salesforce Data-Cloud-Consultant 자격증이 있으시다면 여러분은 당연히 경쟁력향상입니다.
