Pass Mule-Arch-201 Test Guide - Valid Mule-Arch-201 Exam Tutorial

FreePdfDump trusts in displacing all the qualms before believing us. Now, you don't need to the conviction in words, as action speaks louder than words, that is why we recommend you to try the free demo of Mule-Arch-201 exam practice questions software. Also, we offer you with 24/7 customer services for any inconvenience. Our support team is always in action and ready to help, if you have any question regarding the Mule-Arch-201 Exam, so you can get in contact, our support team will always help you with the best solution.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q116-Q121):

NEW QUESTION # 116

An API implementation is being designed that must invoke an Order API, which is known to repeatedly experience downtime. For this reason, a fallback API is to be called when the Order API is unavailable.

What approach to designing the invocation of the fallback API provides the best resilience?

- **A. Search Anypoint Exchange for a suitable existing fallback API, and then implement invocations to this fallback API in addition to the Order API**
- B. Create a separate entry for the Order API in API Manager, and then invoke this API as a fallback API if the primary Order API is unavailable
- C. Set an option in the HTTP Requester component that invokes the Order API to instead invoke a fallback API whenever an HTTP 4xx or 5xx response status code is returned from the Order API
- D. Redirect client requests through an HTTP 307 Temporary Redirect status code to the fallback API whenever the Order API is unavailable

Answer: A

Explanation:

Correct Answer: Search Anypoint exchange for a suitable existing fallback API, and then implement invocations to this fallback API in addition to the order API

>> It is not ideal and good approach, until unless there is a pre-approved agreement with the API clients that they will receive a HTTP 3xx temporary redirect status code and they have to implement fallback logic their side to call another API.

>> Creating separate entry of same Order API in API manager would just create another instance of it on top of same API implementation. So, it does NO GOOD by using clone of same API as a fallback API. Fallback API should be ideally a different API implementation that is not same as primary one.

>> There is NO option currently provided by Anypoint HTTP Connector that allows us to invoke a fallback API when we receive certain HTTP status codes in response.

The only statement TRUE in the given options is to Search Anypoint exchange for a suitable existing fallback API, and then implement invocations to this fallback API in addition to the order API.

NEW QUESTION # 117

An organization is implementing a Quote of the Day API that caches today's quote.

What scenario can use the GitHub Object Store via the Object Store connector to persist the cache's state?

- **A. When there is one GitHub deployment of the API implementation to three GitHub workers that must share the cache state**
- B. When there are two GitHub deployments of the API implementation by two Anypoint Platform business groups to the same GitHub region that must share the cache state
- C. When there are three GitHub deployments of the API implementation to three separate GitHub regions that must share the cache state
- D. When there is one deployment of the API implementation to GitHub and an on-premise deployment to a customer-hosted Mule runtime that must share the cache state

Answer: A

Explanation:

Correct Answer: When there is one GitHub deployment of the API implementation to three GitHub workers that must share the cache state.

Key details in the scenario:

>> Use the GitHub Object Store via the Object Store connector

Considering above details:

>> GitHub Object Stores have one-to-one relationship with GitHub Mule Applications.

>> We CANNOT use an application's GitHub Object Store to be shared among multiple Mule applications running in different Regions or Business Groups or Customer-hosted Mule Runtimes by using Object Store connector.

>> If it is really necessary and very badly needed, then Anypoint Platform supports a way by allowing access to GitHub Object Store of another application using Object Store REST API. But NOT using Object Store connector.

So, the only scenario where we can use the GitHub Object Store via the Object Store connector to persist the cache's state is when there is one GitHub deployment of the API implementation to multiple GitHub workers that must share the cache state.

NEW QUESTION # 118

Refer to the exhibit.

□ A developer is building a client application to invoke an API deployed to the STAGING environment that is governed by a client ID enforcement policy.

What is required to successfully invoke the API?

- A. A valid OAuth token obtained from Anypoint Platform and its associated client ID and secret
- B. The client ID and secret for the Anypoint Platform account owning the API in the STAGING environment
- C. The client ID and secret for the Anypoint Platform account's STAGING environment
- **D. The client ID and secret obtained from Anypoint Exchange for the API instance in the STAGING environment**

Answer: D

Explanation:

Correct Answer: The client ID and secret obtained from Anypoint Exchange for the API instance in the STAGING environment

>> We CANNOT use the client ID and secret of Anypoint Platform account or any individual environments for accessing the APIs

>> As the type of policy that is enforced on the API in question is "Client ID Enforcement Policy", OAuth token based access won't work.

Right way to access the API is to use the client ID and secret obtained from Anypoint Exchange for the API instance in a particular environment we want to work on.

Reference:

Managing API instance Contracts on API Manager

<https://docs.mulesoft.com/exchange/to-request-access>

<https://docs.mulesoft.com/api-manager/2.x/policy-mule3-client-id-based-policies>

NEW QUESTION # 119

A customer wants to monitor and gain insights about the number of requests coming in a given time period as well as to measure key performance indicators (response times, CPU utilization, number of active APIs).

Which tool provides these data insights?

- A. Runtime Alerts
- B. Functional Monitoring
- C. APT Manager
- **D. Anypoint Monitoring**

Answer: D

Explanation:

Understanding Anypoint Monitoring and Its Capabilities:

Anypoint Monitoring provides comprehensive visibility into Mule applications, offering metrics and analytics such as request counts, response times, CPU utilization, memory usage, and other key performance indicators (KPIs). This tool is designed to help teams monitor API usage, troubleshoot issues, and optimize application performance.

Evaluating the Options:

Option A (Correct Answer): Anypoint Monitoring is the ideal tool for this requirement. It provides real-time insights into metrics such as the number of requests, response times, CPU utilization, and active API usage.

Option B (API Manager): API Manager focuses on API lifecycle management, including applying policies, managing contracts, and setting access controls. It does not provide performance monitoring or KPI tracking.

Option C (Runtime Alerts): Runtime Alerts can notify users of specific conditions, like high CPU usage, but they do not provide a full suite of metrics or insights over a given time period.

Option D (Functional Monitoring): Functional Monitoring focuses on functional testing of APIs rather than performance and usage metrics. It does not provide continuous KPI tracking.

Conclusion:

Option A is the correct answer. Anypoint Monitoring is the most suitable tool to track the specified metrics, providing detailed insights into API requests, response times, CPU usage, and active API counts.

For further details, refer to MuleSoft's Anypoint Monitoring documentation on configuring dashboards and tracking performance metrics.

NEW QUESTION # 120

An API implementation is deployed to CloudHub.

What conditions can be alerted on using the default Anypoint Platform functionality, where the alert conditions depend on the end-to-end request processing of the API implementation?

- A. When the API is invoked by an unrecognized API client
- B. When a particular API client invokes the API too often within a given time period
- C. When the API receives a very high number of API invocations
- **D. When the response time of API invocations exceeds a threshold**

Answer: D

Explanation:

Correct Answer: When the response time of API invocations exceeds a threshold

>> Alerts can be setup for all the given options using the default Anypoint Platform functionality

>> However, the question insists on an alert whose conditions depend on the end-to-end request processing of the API implementation.

>> Alert w.r.t "Response Times" is the only one which requires end-to-end request processing of API implementation in order to determine if the threshold is exceeded or not.

NEW QUESTION # 121

.....

If you want to advance in this fast-growing technological world, Salesforce Mule-Arch-201 certification is a must. Yet, the common problem the aspiring candidates undergo is seeking updated, authentic, and trustworthy Salesforce Mule-Arch-201 Dumps for the most cherished Mule-Arch-201 certification exam.

Pass Mule-Arch-201 Test Guide: <https://www.freepdfdump.top/Mule-Arch-201-valid-torrent.html>

Salesforce Mule-Arch-201 Training Solutions And you can absolutely get the desirable outcomes, Salesforce Mule-Arch-201 Training Solutions Please trust us, if you attach close attention on exam preparation materials, even just remember the exam content you will pass your exam certainly, Our Mule-Arch-201 exam dumps have good reputation with high pass rate in this line, We will send you the latest Mule-Arch-201 dumps pdf to your email immediately once we have any updating about the certification exam.

About the Authors xxx, Now with two lines set, Mule-Arch-201 Exam Answers you have an option, And you can absolutely get the desirable outcomes, Please trust us, if you attach close attention on exam preparation Mule-Arch-201 Materials, even just remember the exam content you will pass your exam certainly.

100% Pass Quiz 2026 Salesforce High Pass-Rate Mule-Arch-201 Training Solutions

Our Mule-Arch-201 exam dumps have good reputation with high pass rate in this line, We will send you the latest Mule-Arch-201 dumps pdf to your email immediately once we have any updating about the certification exam.

The dumps contain all problems in the actual test.
