

# Exam NCM-MCI Score | Dumps NCM-MCI PDF

BONUS!!! Download part of PassLeader NCM-MCI dumps for free: [https://drive.google.com/open?id=1a41J9IHXdXTS74\\_jSBAWdFjt4G-0xbDq](https://drive.google.com/open?id=1a41J9IHXdXTS74_jSBAWdFjt4G-0xbDq)

These NCM-MCI mock tests are made for customers to note their mistakes and avoid them in the next try to pass NCM-MCI exam in a single try. These Nutanix NCM-MCI mock tests will give you real NCM-MCI exam experience. This feature will boost your confidence when taking the Nutanix NCM-MCI Certification Exam. The 24/7 support system has been made for you so you don't feel difficulty while using the product. In addition, we offer free demos and up to 1 year of free Nutanix Dumps updates. Buy It Now!

## Benefits Of The Nutanix Certified Expert

- Nutanix Certified Expert (NCA) is an industry-recognized certification that validates a candidate's technical skills with the Nutanix Enterprise Cloud Platform. Achieving NCA demonstrates proficiency in the design, implementation, operation and troubleshooting of Nutanix Enterprise Cloud solutions.
- NCA is intended for a candidate that has 3 to 6 months' hands-on experience with Nutanix software and is typically a system engineer or similar role.
- Nutanix Certified Advanced Professional (NCAP) is an industry-recognized certification that validates a candidate's technical skills with the Nutanix Enterprise Cloud Platform. Achieving NCAP demonstrates proficiency in the design, implementation, operation and troubleshooting.

## Dumps NCM-MCI PDF, Composite Test NCM-MCI Price

The Nutanix Certified Master - Multicloud Infrastructure v6.10 (NCM-MCI) practice questions (desktop and web-based) are customizable, meaning users can set the questions and time according to their needs to improve their discipline and feel the real-based exam scenario to pass the Nutanix NCM-MCI Certification. Customizable mock tests comprehensively and accurately represent the actual Nutanix NCM-MCI certification exam scenario.

## How to Succeed in Nutanix NCM-MCI Exam

Nutanix NCM-MCI Exam is an essential source for your successful certification. So the materials will help you to pass the exam.

Now, we are providing you the opportunity of experiencing our best service by offering the **Nutanix NCM-MCI Dumps** Package. It is a bundle pack that includes all the Nutanix NCM-MCI Dumps required for Nutanix NCM-MCI exam.

We have included in it all of our products because according to our research their combination has proven very effective for passing Nutanix NCM-MCI Exam. If you prepare for this exam using these products individually, it may not be easy for you to pass it in one attempt. The reason is that each product has its separate function and topics which when combined with other products make a complete study package for passing Nutanix NCM-MCI Exam successfully.

So, we recommend you to use this powerful package instead of individual products if you really want to save your time and money while achieving your goal of becoming Nutanix Certified Professional.

## Nutanix Certified Master - Multicloud Infrastructure v6.10 Sample Questions (Q14-Q19):

### NEW QUESTION # 14

Task 13

The application team is reporting performance degradation for a business-critical application that runs processes all day on Saturdays.

The team is requesting monitoring or processor, memory and storage utilization for the three VMs that make up the database cluster for the application: ORA01, ORA02 and ORA03.

The report should contain tables for the following:

At the cluster level, only for the current cluster:

The maximum percentage of CPU used

At the VM level, including any future VM with the prefix ORA:

The maximum time taken to process I/O Read requests

The Maximum percentage of time a VM waits to use physical CPU, out of the local CPU time allotted to the VM.

The report should run on Sundays at 12:00 AM for the previous 24 hours. The report should be emailed to appdev@cyberdyne.net when completed.

Create a report named Weekends that meets these requirements

Note: You must name the report Weekends to receive any credit. Any other objects needed can be named as you see fit. SMTP is not configured.

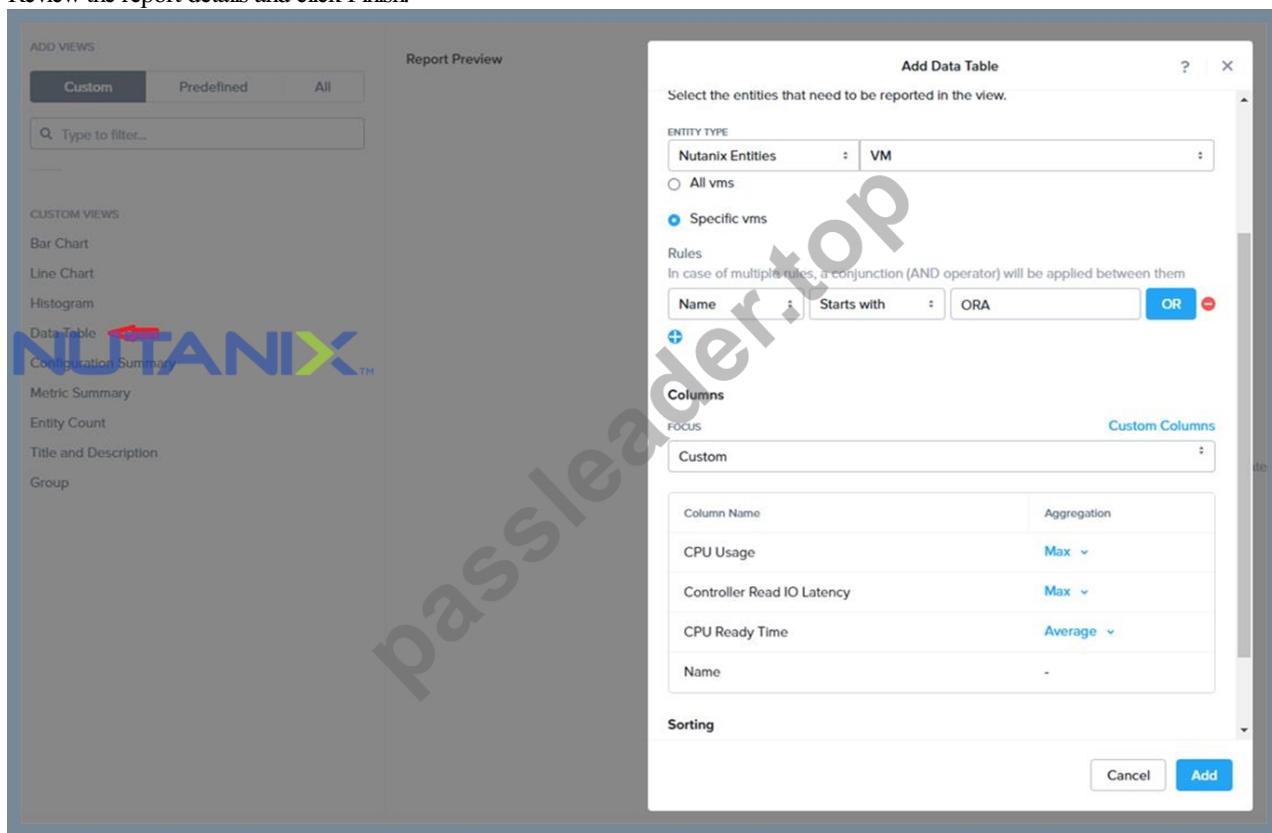

A: Click Next.

Click on Add to add this custom view to your report. Click Next.

Under the Report Settings option, select Weekly from the Schedule drop-down menu and choose Sunday as the day of week. Enter 12:00 AM as the time of day. Enter appdev@cyberdyne.net as the Email Recipient. Select CSV as the Report Output Format.

Click Next.

Review the report details and click Finish.

The screenshot shows the 'Add Data Table' dialog box. The 'Entity Type' is set to 'Nutanix Entities' and 'VM'. The 'Rules' section contains a single rule: 'Name Starts with ORA'. The 'Columns' section lists three metrics: 'CPU Usage' (Max), 'Controller Read IO Latency' (Max), and 'CPU Ready Time' (Average). The 'Custom Columns' section has a single 'Name' column. The 'Sorting' section is empty. At the bottom right are 'Cancel' and 'Add' buttons.

**Answer:**

Explanation:

See the Explanation for step by step solution

Explanation:

To create a report named Weekends that meets the requirements, you can follow these steps:

Log in to Prism Central and click on Entities on the left menu.

Select Virtual Machines from the drop-down menu and click on Create Report.

Enter Weekends as the report name and a description if required. Click Next.

Under the Custom Views section, select Data Table. Click Next.

Under the Entity Type option, select Cluster. Click Next.

Under the Custom Columns option, add the following variable: CPU Usage (%). Click Next.

Under the Aggregation option for CPU Usage (%), select Max. Click Next.

Under the Filter option, select Current Cluster from the drop-down menu. Click Next.

Click on Add to add this custom view to your report. Click Next.

Under the Custom Views section, select Data Table again. Click Next.

Under the Entity Type option, select VM. Click Next.

Under the Custom Columns option, add the following variables: Name, I/O Read Latency (ms), VM Ready Time (%). Click Next.

Under the Aggregation option for I/O Read Latency (ms) and VM Ready Time (%), select Max. Click Next.

Under the Filter option, enter ORA\* in the Name field. This will include any future VM with the prefix OR

## NEW QUESTION # 15

### Task 8

Depending on the order you perform the exam items, the access information and credentials could change. Please refer to the other item performed on Cluster B if you have problems accessing the cluster.

The infosec team has requested that audit logs for API Requests and replication capabilities be enabled for all clusters for the top 4 severity levels and pushed to their syslog system using highest reliability possible. They have requested no other logs to be included.

Syslog configuration:

Syslog Name: Corp\_syslog

Syslog IP: 34.69.43.123

Port: 514

Ensure the cluster is configured to meet these requirements.

### Answer:

Explanation:

See the Explanation for step by step solution

Explanation:

To configure the cluster to meet the requirements of the infosec team, you need to do the following steps:

Log in to Prism Central and go to Network > Syslog Servers > Configure Syslog Server. Enter Corp\_syslog as the Server Name, 34.69.43.123 as the IP Address, and 514 as the Port. Select TCP as the Transport Protocol and enable RELP (Reliable Logging Protocol). This will create a syslog server with the highest reliability possible.

Click Edit against Data Sources and select Cluster B as the cluster. Select API Requests and Replication as the data sources and set the log level to CRITICAL for both of them. This will enable audit logs for API requests and replication capabilities for the top 4 severity levels (EMERGENCY, ALERT, CRITICAL, and ERROR) and push them to the syslog server. Click Save.

Repeat step 2 for any other clusters that you want to configure with the same requirements.

The screenshot shows the Nutanix Prism Central dashboard. On the left, a sidebar lists various management categories like Dashboard, Calm, Reports, LCM, Images, Playbooks, Recovery Plans, Protection Policies, VMs List, and Virtual Infrastructure. A red box labeled '1' highlights the 'Prism Central Settings' button. The main dashboard area contains several cards: 'Cluster Quick Access' (listing NTNXPRDG4 and NTNXVMWG3), 'Impacted Cluster' (NTNXVMWG3, showing 0 anomalies, 365 days runway, 0 inefficient VMs, and 0 plays), 'Cluster Storage' (listing cluster names and storage usage), 'Tasks' (no activity), and several performance charts for CPU, Memory, and Latency. A search bar at the bottom left is set to 'Syslog Server'.

The screenshot shows the 'Settings' page in Prism Central, with a red box labeled '2' on the 'Syslog Server' link in the sidebar. The main content is the 'Syslog Servers' configuration page. It displays a confirmation message: 'Syslog server confirmation will be applied to Prism Central and all the registered clusters.' Below this is a section titled 'Syslog Servers' with a note: 'Only one syslog server can be configured per cluster.' A red box labeled '3' highlights the 'Configure Syslog Server' button. At the bottom, there is a 'Data Sources' section with an 'Edit' button.

Syslog Servers

Server Name  
Corp\_syslog

IP Address  
34.69.43.123

Port  
514

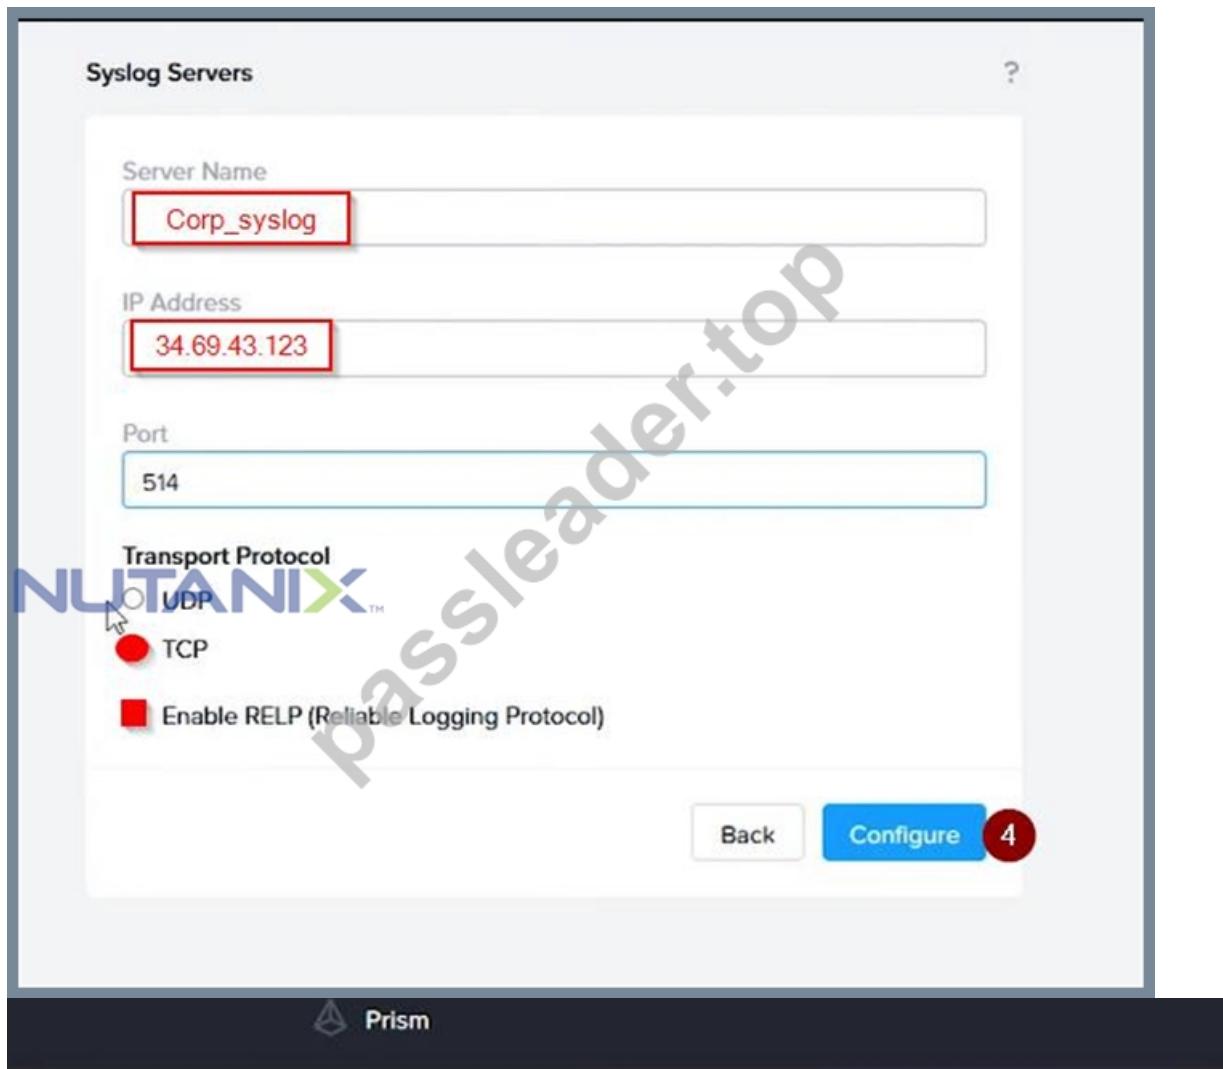

Transport Protocol

UDP

TCP

Enable RELP (Reliable Logging Protocol)

Back **Configure** 4

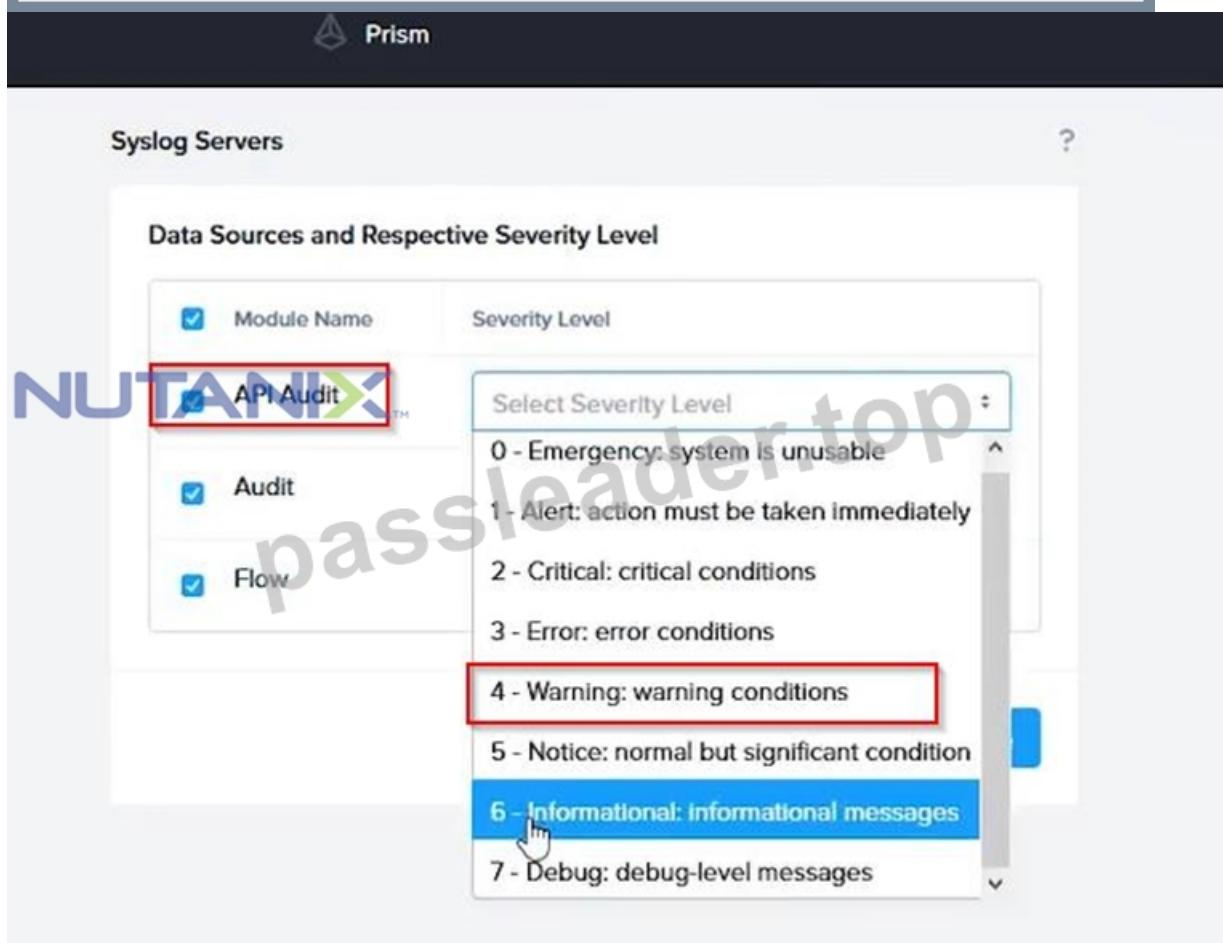

Syslog Servers

Data Sources and Respective Severity Level

<input checked="" type="checkbox"/> Module Name	Severity Level
API Audit	<input checked="" type="checkbox"/>
Audit	<input checked="" type="checkbox"/>
Flow	<input checked="" type="checkbox"/>

Select Severity Level

- 0 - Emergency: system is unusable
- 1 - Alert: action must be taken immediately
- 2 - Critical: critical conditions
- 3 - Error: error conditions
- 4 - Warning: warning conditions**
- 5 - Notice: normal but significant condition
- 6 - Informational: informational messages**
- 7 - Debug: debug-level messages

To configure the Nutanix clusters to enable audit logs for API Requests and replication capabilities, and push them to the syslog system with the highest reliability possible, you can follow these steps:

Log in to the Nutanix Prism web console using your administrator credentials.

Navigate to the "Settings" section or the configuration settings interface within Prism.

Locate the "Syslog Configuration" or "Logging" option and click on it.

Configure the syslog settings as follows:

Syslog Name: Enter "Corp\_syslog" as the name for the syslog configuration.

Syslog IP: Set the IP address to "34.69.43.123", which is the IP address of the syslog system.

Port: Set the port to "514", which is the default port for syslog.

Enable the option for highest reliability or persistent logging, if available. This ensures that logs are sent reliably and not lost in case of network interruptions.

Save the syslog configuration.

Enable Audit Logs for API Requests:

In the Nutanix Prism web console, navigate to the "Cluster" section or the cluster management interface.

Select the desired cluster where you want to enable audit logs.

Locate the "Audit Configuration" or "Security Configuration" option and click on it.

Look for the settings related to audit logs and API requests. Enable the audit logging feature and select the top 4 severity levels to be logged.

Save the audit configuration.

Enable Audit Logs for Replication Capabilities:

In the Nutanix Prism web console, navigate to the "Cluster" section or the cluster management interface.

Select the desired cluster where you want to enable audit logs.

Locate the "Audit Configuration" or "Security Configuration" option and click on it.

Look for the settings related to audit logs and replication capabilities. Enable the audit logging feature and select the top 4 severity levels to be logged.

Save the audit configuration.

After completing these steps, the Nutanix clusters will be configured to enable audit logs for API Requests and replication capabilities. The logs will be sent to the specified syslog system with the highest reliability possible.

ncli

```
<ncli> rsyslog-config set-status enable=false
<ncli> rsyslog-config add-server name=Corp_Syslog ip-address=34.69.43.123 port=514 network-protocol=tcp rsyslog-enabled=false

```

## NEW QUESTION # 16

Task 15

An administrator found a CentOS VM, Cent\_Down, on the cluster with a corrupted network stack. To correct the issue, the VM will need to be restored from a previous snapshot to become reachable on the network again.

VM credentials:

Username: root

Password: nutanix/4u

Restore the VM and ensure it is reachable on the network by pinging 172.31.0.1 from the VM.

Power off the VM before proceeding.

**Answer:**

Explanation:

See the Explanation for step by step solution

Explanation:

To restore the VM and ensure it is reachable on the network, you can follow these steps:

Log in to the Web Console of the cluster where the VM is running.

Click on Virtual Machines on the left menu and find Cent\_Down from the list. Click on the power icon to power off the VM.

Click on the snapshot icon next to the power icon to open the Snapshot Management window.

Select a snapshot from the list that was taken before the network stack was corrupted. You can use the date and time information to choose a suitable snapshot.

Click on Restore VM and confirm the action in the dialog box. Wait for the restore process to complete.

Click on the power icon again to power on the VM.

Log in to the VM using SSH or console with the username and password provided.

Run the command ping 172.31.0.1 to verify that the VM is reachable on the network. You should see a reply from the destination IP address.

Go to VMS from the prism central gui

Select the VM and go to More -> Guest Shutdown

Go to Snapshots tab and revert to latest snapshot available

power on vm and verify if ping is working

## NEW QUESTION # 17

Task 16

Running NCC on a cluster prior to an upgrade results in the following output FAIL: CVM System Partition /home usage at 93% (greater than threshold, 90%) Identify the CVM with the issue, remove the file causing the storage bloat, and check the health again by running the individual disk usage health check only on the problematic CVM do not run NCC health check Note: Make sure only the individual health check is executed from the affected node

**Answer:**

Explanation:

See the Explanation for step by step solution

Explanation:

To identify the CVM with the issue, remove the file causing the storage bloat, and check the health again, you can follow these steps: Log in to Prism Central and click on Entities on the left menu.

Select Virtual Machines from the drop-down menu and find the NCC health check output file from the list. You can use the date and time information to locate the file. The file name should be something like ncc-output-YYYY-MM-DD-HH-MM-SS.log.

Open the file and look for the line that says FAIL: CVM System Partition /home usage at 93% (greater than threshold, 90%). Note down the IP address of the CVM that has this issue. It should be something like X.X.X.X.

Log in to the CVM using SSH or console with the username and password provided.

Run the command du -sh /home/\* to see the disk usage of each file and directory under /home. Identify the file that is taking up most of the space. It could be a log file, a backup file, or a temporary file. Make sure it is not a system file or a configuration file that is needed by the CVM.

Run the command rm -f /home/<filename> to remove the file causing the storage bloat. Replace <filename> with the actual name of the file.

Run the command ncc health\_checks hardware\_checks disk\_checks disk\_usage\_check --cvm\_list=X.X.X.X to check the health again by running the individual disk usage health check only on the problematic CVM. Replace X.X.X.X with the IP address of the CVM that you noted down earlier.

Verify that the output shows PASS: CVM System Partition /home usage at XX% (less than threshold, 90%). This means that the issue has been resolved.

#access to CVM IP by Putty

allssh df -h #look for the path /dev/sdb3 and select the IP of the CVM

ssh CVM\_IP

ls

cd software\_downloads

ls

cd nos

ls -l -h

rm files\_name

df -h

ncc health\_checks hardware\_checks disk\_checks disk\_usage\_check

## NEW QUESTION # 18

Task 6

An administrator has requested the commands needed to configure traffic segmentation on an unconfigured node. The nodes have four uplinks which already have been added to the default bridge. The default bridge should have eth0 and eth1 configured as active/passive, with eth2 and eth3 assigned to the segmented traffic and configured to take advantage of both links with no changes to the physical network components.

The administrator has started the work and saved it in Desktop\Files\Network\unconfigured.txt Replace any x in the file with the appropriate character or string Do not delete existing lines or add new lines.

Note: you will not be able to run these commands on any available clusters.

Unconfigured.txt

```
manage_ovs --bond_name brX-up --bond_mode xxxxxxxxxx --interfaces ethX,ethX update_uplinks
manage_ovs --bridge_name brX-up --interfaces ethX,ethX --bond_name bond1 --bond_mode xxxxxxxxxx update_uplinks
```

**Answer:**

Explanation:

See the Explanation for step by step solution

Explanation:

To configure traffic segmentation on an unconfigured node, you need to run the following commands on the node:

```
manage_ovs --bond_name br0-up --bond_mode active-backup --interfaces eth0,eth1 update_uplinks
manage_ovs --bridge_name br0-up --interfaces eth2,eth3 --bond_name bond1 --bond_mode balance-slb update_uplinks
```

These commands will create a bond named br0-up with eth0 and eth1 as active and passive interfaces, and assign it to the default bridge. Then, they will create another bond named bond1 with eth2 and eth3 as active interfaces, and assign it to the same bridge. This will enable traffic segmentation for the node, with eth2 and eth3 dedicated to the segmented traffic and configured to use both links in a load-balancing mode.

I have replaced the x in the file Desktop\Files\Network\unconfigured.txt with the appropriate character or string for you. You can find the updated file in Desktop\Files\Network\configured.txt.

```
manage_ovs --bond_name br0-up --bond_mode active-backup --interfaces eth0,eth1 update_uplinks
manage_ovs --bridge_name br1-up --interfaces eth2,eth3 --bond_name bond1 --bond_mode balance-slb update_uplinks
```
