DEP-2025 practice braindumps & DEP-2025 test prep cram
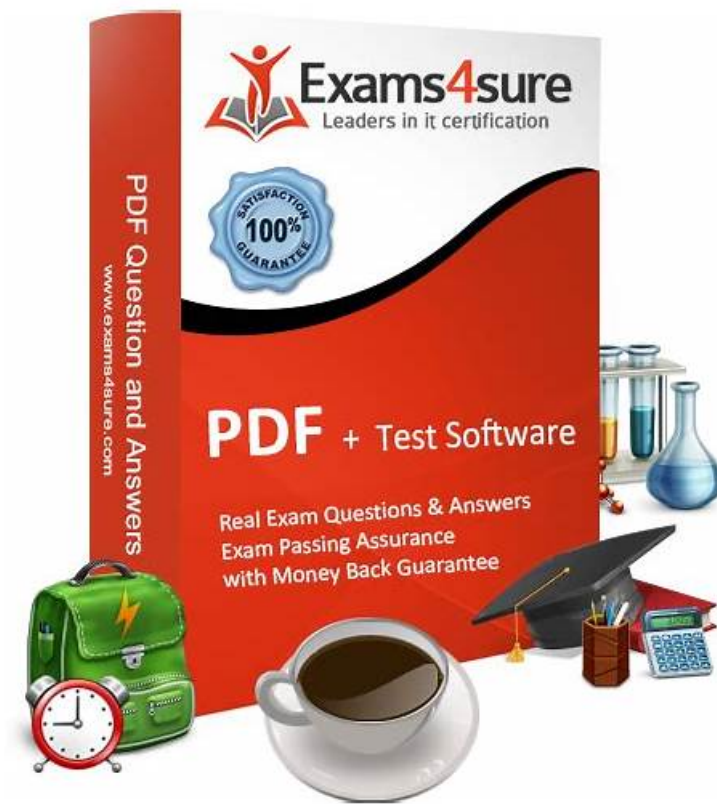

We decided to research because we felt the pressure from competition. We must also pay attention to the social dynamics in the process of preparing for the DEP-2025 exam. Experts at our DEP-2025 simulating exam have been supplementing and adjusting the content of our products. So our DEP-2025 Exam Questions are always the most accurate and authoritative. At the same time, our professional experts keep a close eye on the updating the DEP-2025 study materials. That is why our DEP-2025 training prep is the best seller on the market.

The benefits after you pass the test DEP-2025 certification are enormous and you can improve your social position and increase your wage. Our DEP-2025 study materials will help you gain the success in your career. You can be respected and enjoy the great fame among the industry. When applying for the jobs your resumes will be browsed for many times and paid high attention to. The odds to succeed in the job interview will increase. So you could see the detailed information of our DEP-2025 Study Materials before you decide to buy them.

Pass Your Apple DEP-2025: Apple Deployment and Management Exam Exam with Correct Valid DEP-2025 Exam Questions Surely

Our DEP-2025 practice dumps enjoy popularity throughout the world. So with outstanding reputation, many exam candidates have a detailed intervention with our staff before and made a plea for help. We totally understand your mood to achieve success at least the DEP-2025 Exam Questions right now, so our team makes progress ceaselessly in this area to make better DEP-2025 study guide for you. We supply both goods which are our DEP-2025 practice materials as well as high quality services.

Apple DEP-2025 Exam Syllabus Topics:

Topic	Details
Topic 1	• Identity Services: This section of the exam measures the skills of an MDM Specialist and covers supported identity services on Apple devices, including Platform SSO and Single Sign-On, helping users manage secure access and authentication.
Topic 2	• Apple Configurator: This section of the exam measures the skills of an IT Administrator and covers the usage of Apple Configurator in enrollment, supervision, and deployment of Apple devices. It includes an overview of its features and setup processes.
Topic 3	• Apple Business Manager and Apple School Manager: This section of the exam measures the skills of an MDM Specialist and covers managing connections to resellers and managing device suppliers. It emphasizes the use of Apple Business Manager or School Manager to streamline large-scale deployments.
Topic 4	• Software Updates: This section of the exam measures the skills of an MDM Specialist and covers update management strategies using MDM. It includes handling deadlines, updating behavior, and ensuring that updates are properly delivered and installed.
Topic 5	• Device Support: This section of the exam measures the skills of an IT Administrator and covers troubleshooting Mac startup, recovery, and password reset processes using macOS Recovery. It ensures support professionals can maintain and restore device functionality.
Topic 6	• Prepare Your Environment: This section of the exam measures the skills of an IT Administrator and covers the important factors involved in evaluating and preparing the environment for a successful MDM implementation. It emphasizes strategic planning before rollout.
Topic 7	• Network Integration: This section of the exam measures the skills of an IT Administrator and covers assessing network responsiveness and device connectivity. It also covers wireless auto-join behavior on Apple devices and ensures strong network coverage.
Topic 8	• Device Security: This section of the exam measures the skills of an MDM Specialist and covers encryption on Apple platforms, FileVault operations, and the importance of key management. It focuses on protecting sensitive data on managed devices.
Topic 9	• Manage Content and Data Flow: This section of the exam measures the skills of an IT Administrator and covers app distribution methods including managed, custom, and proprietary apps. It focuses on content purchasing and delivery through Apple Business or School Manager.

Apple Deployment and Management Exam Sample Questions (Q214-Q219):

NEW QUESTION # 214
Which of these is a valid consideration when organizations buy content in Apple Business Manager?

- A. Organizations must negotiate a license directly with the publisher when buying free content.
- B. Only IT administrators can make purchases on behalf of the organization.
- C. Licenses for purchased apps can be transferred to another location.
- D. Content is automatically assigned to user accounts.

Answer: C

Explanation:
Licenses can be transferred within an organization. The Apple Business Manager User Guide states, "Licenses for purchased apps can be transferred to another location within the same organization in Apple Business Manager." Options B, C, and D are incorrect as free content doesn't require negotiation, assignment isn't automatic, and multiple roles can purchase.
Reference:
Apple Business Manager User Guide, "Manage Licenses" section.
Apple Platform Deployment Guide, "Content Management" section.

NEW QUESTION # 215

A user enrolled their personal iPhone in the organization's MDM solution. Which of these management capabilities does the organization's MDM solution have on the user's iPhone?

- **A. Configure Per-App VPN**
- B. Access device location
- C. Remotely wipe the device
- D. Enable Activation Lock

Answer: A

Explanation:

In aUser Enrollmentscenario (BYOD), Apple ensures strict separation of work and personal data. MDM has limited authority and cannot track personal location, wipe the entire device, or alter Activation Lock. Instead, MDM can configure work-related features such asPer-App VPN(A). Apple Learning explains that this ensures organizational traffic from managed apps is routed securely without affecting personal app traffic.

This preserves privacy while providing enterprise-level security. Location data and systemwide controls are unavailable to MDM on personally owned devices. Full wipe is restricted to organizationally owned devices under Automated Device Enrollment. Therefore, configuringPer-App VPNis the correct capability, as it balances enterprise data protection while respecting personal device use.
References:Apple Platform Deployment - "Capabilities of User Enrollment."

NEW QUESTION # 216

Your organization deployed managed Mac computers with Apple silicon to its users. They don't want users to access Startup Security Utility. Which MDM command can your organization use to prevent users from accessing Startup Security Utility?

- A. PreventSystemSecurityAccess
- **B. SetRecoveryLock**
- C. EnableFileVault
- D. SetFirmwarePassword

Answer: B

Explanation:

Apple silicon Macs introduced a new security model, replacing firmware passwords with theSetRecoveryLockMDM command. This command allows administrators to set a recovery password that must be entered before anyone can boot into macOS Recovery. SinceStartup Security Utilityis accessed through Recovery, the Recovery Lock effectively prevents end users from entering this tool without IT authorization. Apple's learning materials clarify that legacy commands likeSetFirmwarePasswordapply only to Intel-based Macs. FileVault protects data at rest but does not block access to Recovery.

PreventSystemSecurityAccess is not a defined MDM command. The correct and modern approach isSetRecoveryLock, which aligns with Apple silicon's secure boot architecture and enterprise deployment best practices.
References:Apple Platform Deployment - "Use Recovery Lock with Apple silicon Macs."

NEW QUESTION # 217

Your organization set up a Wi-Fi network SSID with support for the fastest connection options for its devices.
Your organization's iPad devices connect to 2.4GHz frequency instead of 5GHz or 6GHz. What is the most likely reason?

- A. iPad devices prefer 2.4GHz Wi-Fi.
- B. The Wi-Fi network is using 40MHz wide channels.
- C. The SSID has 802.11r enabled for 2.4GHz.
- **D. The 2.4GHz signal is significantly stronger.**

Answer: D

Explanation:

Apple devices do not prioritize Wi-Fi bands based solely on speed potential; they select based onsignal strengthand stability. Apple Learning clarifies that if the2.4GHz signal is significantly strongerthan available
5GHz or 6GHz options, iPad devices will connect to 2.4GHz despite it being slower. This band penetrates walls and travels farther, so it often appears stronger in coverage tests. Options like 40MHz channels or 802.11 r affect performance and roaming but do not explain why devices prefer one band over another. Apple recommends optimizing wireless deployments by balancing transmit

power, disabling legacy rates if possible, and using band steering on enterprise-grade wireless controllers. The most direct explanation is signal strength dominance at 2.4GHz.
References:Apple Platform Deployment - "Wi-Fi roaming and band selection in Apple devices."

NEW QUESTION # 218

You're using your organization's MDM solution to change the password of a managed administrator account that's SecureToken enabled. What occurs?

- A. The login and SecureToken passwords are updated.
- B. The login password can't be changed.
- C. The SecureToken password is updated, not the login password.
- D. The login password is updated, not the SecureToken password.

Answer: A

Explanation:
On macOS, aSecureToken-enabled accountis tied to FileVault and other cryptographic functions. Apple Learning specifies that when MDM is used to change the password of a managed administrator account that already has SecureToken, both thelogin passwordand theSecureToken passwordare updated together. This synchronization is critical because a mismatch between login credentials and SecureToken would lock the user out of decrypting the FileVault-protected volume. Apple designed MDM password management to handle both elements in tandem to prevent account lockout and ensure continuity of access. Options suggesting only one password is updated, or that the change cannot occur, contradict Apple's documented behavior. Therefore, both the login and SecureToken passwords are updated simultaneously when the change is pushed through MDM.
