ISQI ISAQB Certified Professional for Software Architecture - Foundation Level Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which three artifacts does the assessment team create when conducting an ATAM evaluation? (Choose three.)

- A. Selection of the quality attributes of the architectural building blocks
- B. Description of quality scenarios
- C. A quality model
- D. Architecture-specific chapters of the quality management manual
- E. List of the architectural risks
- F. Architecture documentation
- G. The concrete quality tree

Answer: B,E,G

Explanation:

The Architecture Tradeoff Analysis Method (ATAM) helps evaluate architecture decisions with respect to quality attributes by

producing several key artifacts:

* B: The concrete quality tree illustrates and organizes the quality attributes specific to the architecture being evaluated, showing how generic quality attributes are refined into measurable scenarios.

* C: Description of quality scenarios specifies and documents the scenarios under which the architecture's responses are tested against the desired quality attributes.

* G: List of the architectural risks identifies potential risks in the architecture that may threaten the system's ability to meet its quality goals, aiding in proactive risk management.

NEW QUESTION # 32

Which two of the following statements about quality characteristics are most accurate? (Choose two.)

- A. **Simplicity increases comprehensibility**
- B. Increased efficiency results in reduced performance
- C. **Increased flexibility improves robustness**
- D. Flexibility reduces testability

Answer: A,C

NEW QUESTION # 33

What role does understandability play for architecture documentation? (Choose three.)

- A. It is desirable, but not essential.
- B. It is a quality characteristic together with correctness and efficiency.
- C. **It is an important quality characteristic.**
- D. It is less important than completeness.
- E. **It is a quality characteristic together with scope and completeness.**
- F. **It is a quality characteristic together with simplicity and brevity.**

Answer: C,E,F

Explanation:

Understandability in architecture documentation is crucial as it directly impacts the ease with which the architecture can be reviewed, maintained, and extended. Here's why the chosen answers are relevant:

* It is an important quality characteristic (C): Understandability ensures that the architecture is accessible not only to the creators but also to other stakeholders like new team members, management, and maintenance personnel. This aids in the effective communication of the architecture's intent, usage, and functionalities.

* It is a quality characteristic together with simplicity and brevity (E): Simplicity and brevity contribute to making complex systems easier to understand. Concise and straightforward documentation helps in quicker comprehension and reduces ambiguities.

* It is a quality characteristic together with scope and completeness (F): While it is important for the documentation to be comprehensive, it should also clearly define the scope of the system. This helps in setting the right expectations and ensures that the documentation covers all necessary aspects thoroughly, thus enhancing understandability.

References:

* "Documenting Software Architectures: Views and Beyond" by Paul Clements et al. emphasizes the importance of these aspects in effective architecture documentation.

* ISO/IEC 42010 also highlights understandability as a fundamental quality characteristic of architectural descriptions.

NEW QUESTION # 34

Which of the following statements regarding iterative and incremental design are correct? Please name the three statements that fit the best.

P-Question. From the following 6 answers select 3 that fit best

- A. **Iterations help to deal with uncertainties.**
- B. If the incremental approach is used, risks are detected at a later stage
- C. **If iterative design is used, the customer will be less involved**
- D. Iterative design leads to project delays
- E. The iterative approach helps to detect design problems at an earlier stage
- F. **If incremental design is used, key functionality is considered as early as possible**

Answer: A,C,F
