

Analytics-Con-301 Schulungsunterlagen - Analytics-Con-301 Tests

P.S. Kostenlose 2026 Salesforce Analytics-Con-301 Prüfungsfragen sind auf Google Drive freigegeben von ZertPruefung verfügbar: https://drive.google.com/open?id=1MukZhRLQaYzN6SyNqK--aP8c7AfJ8E5_

Die Examfragen zur Salesforce Analytics-Con-301 Zertifizierungsprüfung von ZertPruefung ist von den IT-Experten verifiziert und überprüft. Die Fragen und Antworten zur Salesforce Analytics-Con-301 Zertifizierungsprüfung sind die von der Praxis überprüfte Software und die Schulungsinstrumente. In ZertPruefung werden Sie die besten Zertifizierungsmaterialien finden, die originale Fragen und Antworten enthalten. Unsere Materialien bieten Ihnen die Chance, die echten Übungen zu machen. Endlich werden Sie Ihr Ziel, nämlich die Salesforce Analytics-Con-301 Zertifizierungsprüfung zu bestehen, erreichen.

Die Fragenkataloge zur Salesforce Analytics-Con-301 Zertifizierungsprüfung aus ZertPruefung ist eine Sammlung der Erfahrungen der zertifizierten IT-Fachleute in der IT-Branche und das Ergebnis unserer Innovation. Wir garantieren für Ihre einjährige kostenlose Aktualisierung, nachdem Sie unsere online Prüfungsfragen zur Salesforce Analytics-Con-301 Zertifizierung gekauft haben. Wenn die Fragenkataloge zur Salesforce Analytics-Con-301 Zertifizierungsprüfung irgend ein Qualitätsproblem haben oder Sie die Salesforce Analytics-Con-301 Zertifizierungsprüfung nicht bestehen, erstatten wir alle Ihren bezahlten Einkaufsgebühren zurück.

Echte Analytics-Con-301 Fragen und Antworten der Analytics-Con-301 Zertifizierungsprüfung

Die Prüfungen, die ITeer ablegen wollen, sind vielleicht Salesforce Zertifizierungsprüfungen. Als die international zertifizierte Prüfung sind Salesforce Prüfungen immer mehr populärer. In dieser Prüfung ist Salesforce Analytics-Con-301 Zertifizierungsprüfung die wichtigste Prüfung. Diese Zertifizierung kann Ihre sehr ausgezeichnete Fähigkeit beweisen. Aber diese Prüfung ist sehr schwierig wie die Wichtigkeit der Prüfungen. Aber sorgen Sie sich bitte nicht um den Erfolg, weil ZertPruefung Ihnen helfen, diese Salesforce Analytics-Con-301 Prüfung zu bestehen.

Salesforce Analytics-Con-301 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Data Analysis: This domain targets Tableau Consultants to plan and prepare data connections effectively. It includes recommending data transformation strategies, designing row-level security (RLS) data structures, and implementing advanced data connections such as Web Data Connectors and Tableau Bridge. Skills in specifying granularity and aggregation strategies for data sources across Tableau products are emphasized.
Thema 2	IT Management: This domain measures skills related to managing Tableau environments. It includes planning server upgrades, recommending deployment solutions (on-premise or cloud), and ensuring alignment between technical and business requirements for analytics infrastructure. It also involves troubleshooting and optimizing system performance relevant to Tableau Server and Cloud deployments.
Thema 3	Business Analysis: This section of the exam measures skills of Tableau Consultants focusing on evaluating the current state of analytics within an organization. It covers mapping business needs to Tableau capabilities, translating analytical requirements to best practices in Tableau, and recommending appropriate deployment options like Tableau Server or Tableau Cloud. It also includes evaluating existing data structures for supporting business needs and identifying performance risks and opportunities.
Thema 4	Data Visualization: This section evaluates the Tableau Consultant's ability to design effective visual analytics solutions. It involves creating dashboards and visual reports that enhance user understanding, employing techniques like dynamic actions and advanced chart types, and ensuring performance optimization for an interactive user experience.

Salesforce Certified Tableau Consultant Analytics-Con-301 Prüfungsfragen mit Lösungen (Q22-Q27):

22. Frage

A client calculates the percent of total sales for a particular region compared to all regions.

The Sales percentage is inadvertently recalculated each time the filter is applied to the Region.

Which calculation should fix the automatic recalculation on the % of total field?

- A. {FIXED [Region]: SUM([Sales])}
- B. {FIXED [Region]: SUM([Sales])} / {FIXED :SUM([Sales])}
- C. {FIXED [Region]: SUM([Sales])} / SUM([Sales])
- D. {FIXED [Region]: SUM([Sales])} / { [Sales] }

Antwort: B

Begründung:

The problem:

The client wants:

Percent of total sales for each region compared to ALL regions, even when Region is filtered.

However, the calculation currently behaves like a table calculation:

$\text{SUM}([Sales]) / \text{TOTAL}(\text{SUM}([Sales]))$

This recalculates the total after Region filters are applied, so removing a region changes the denominator.

Tableau Documentation - How to prevent recalculation:

To keep percent-of-total unchanged when filtering, Tableau's recommended method is to use FIXED LOD expressions to lock the granularity.

Two values must be fixed:

* Numerator: Sales for that specific region { FIXED [Region] : SUM([Sales]) }

* Denominator: Total sales across all regions, independent of filters { FIXED : SUM([Sales]) } (FIXED with no dimension = entire data set) Then compute the percentage:

$\{ \text{FIXED [Region] : SUM([Sales])} \} / \{ \text{FIXED : SUM([Sales])} \}$

This ensures:

* The region sales remain accurate.

* The overall total remains constant, even if filters remove regions.

* Region filtering no longer recalculates percent-of-total.

Why the other options are incorrect:

A). {FIXED [Region]: SUM([Sales])} / SUM([Sales])

The denominator is still affected by filters # recalculates % of total.

B). {FIXED [Region]: SUM([Sales])} / { [Sales] }

{[Sales]} is not valid syntax and does not fix granularity.

D). {FIXED [Region]: SUM([Sales])}

This gives only the numerator - no percent-of-total calculation.

The only correct LOD solution is option C.

* Tableau LOD Expression Guide: FIXED for filter-independent calculations.

* Tableau Percent-of-Total Best Practices: use FIXED LOD to avoid recalculation when filters change.

* Order of Operations: FIXED LODs occur before dimension filters, keeping totals stable.

23. Frage

A transport and delivery company uses a command center dashboard in its logistics and distribution hubs. The dashboard is displayed on screens to show fleet movements, delivery status, and warehouse operations. The company needs the dashboard to provide up-to-date information without human intervention. The company's environment cannot access the internet, and the data source is configured to maintain a real-time connection.

How should the company meet this requirement?

- A. Schedule a prep flow to refresh the dashboard at regular intervals.
- B. Configure the data source to extract instead of live. Schedule the extract refresh of data at regular intervals.
- C. Search and download a suitable sandboxed dashboard extension from Tableau Exchange to refresh the dashboard at regular intervals.
- **D. Build a web app with dashboard extension API that refreshes the dashboard at regular intervals. Host the web app on the company's web server.**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

Key details from the scenario:

- * The dashboard is on a command center screen.
- * The environment cannot access the internet.
- * The data source is real-time (live).
- * The dashboard must keep itself refreshed automatically.
- * No human interaction should be required.

From Tableau's documentation:

Dashboard Extension API

Tableau's Extension API allows developers to create custom extensions that can automate refreshing a live dashboard at intervals.

The extension is hosted on the company's internal web server, which solves the "no internet access" limitation.

This is the only method in the listed options that:

- * Works offline
- * Can auto-refresh the dashboard
- * Supports a "screen-based" live monitoring use case
- * Uses the existing live connection (no need for extracts)

Thus, A is correct.

Why the other options are wrong:

B. Schedule a Prep Flow

Prep flows do not refresh dashboards.

They only refresh prepared data sources.

The dashboard still won't auto-update unless reopened.

C. Download an extension from Tableau Exchange

Tableau Exchange requires internet access, which the company does not have.

Also, "sandboxed extensions" cannot refresh the dashboard at timed intervals.

D. Use extracts and scheduled extract refresh

Extracts require:

- * A Tableau Server / Cloud schedule
- * Internet access for Cloud
- * And extracts are not real-time. This contradicts the requirement for real-time data and an offline environment.

24. Frage

A client is working in Tableau Prep and has a field named OrderId that is compiled by country, year, and an order number as shown in the following table.

What should the consultant use to transform the table in the most efficient manner?

- A. The Split option
- B. The Aliases option
- C. A calculated field that uses the LEFT function
- D. A calculated field that uses the TRIM function

Antwort: A

Begründung:

To transform the OrderId field in Tableau Prep, the Split option is the most efficient and straightforward method. Here's how you can apply it:

In Tableau Prep, drag your dataset into the flow.

Click on the OrderId field in the workspace to select it.

Look for the option in the toolbar that says "Split" and select it.

Choose "Automatic Split" if the delimiters (such as hyphens) are consistent; Tableau Prep should automatically detect the hyphen as the delimiter and split the OrderId into multiple new fields.

The dataset should now show new columns: one for the country code (CA, FR, US), one for the year (2017), and one for the order number (152156, 152157, etc.).

The Split option works effectively here because it automatically identifies and uses the hyphen as the delimiter to divide the original OrderId into the desired components without manual specification of conditions or writing any formulas.

References

This procedure is based on the standard functionalities provided in Tableau Prep for splitting a field into multiple columns based on a delimiter, as described in the Tableau Prep user guide.

25. Frage

A client wants to migrate their Tableau Server to Tableau Cloud. The Tableau Server is configured with three sites: Finance, Strategy, and Marketing. A consultant must provide a solution that minimizes user impact and costs.

Which configuration should the consultant recommend for Tableau Cloud to meet the client's requirements?

- A. Three separate Tableau Cloud instances for Finance, Strategy, and Marketing
- B. One Tableau Cloud instance configured with all workbooks in a single project
- C. One Tableau Cloud instance with two sites for Strategy and Marketing, and one Tableau Server instance for Finance
- D. One Tableau Cloud instance configured with a Finance project folder, Strategy project folder, and Marketing project folder

Antwort: D

Begründung:

To minimize user impact and costs while migrating from Tableau Server to Tableau Cloud with multiple sites, the best solution is: Single Tableau Cloud Instance with Multiple Projects: Instead of multiple sites which could imply higher management overhead and possibly higher costs, configuring one Tableau Cloud instance with different project folders for each former site (Finance, Strategy, Marketing) is most efficient.

Benefits: This setup maintains organizational separation of data and access similar to having different sites but leverages the unified management and simplicity of a single cloud instance. It reduces complexity in user access management and integration points.

Implementation: Each project folder acts like a mini-site within the larger instance, where specific permissions and content can be managed independently, akin to the original server setup but within a single cloud-based environment.

References

This recommendation is in line with best practices for cloud migration focusing on consolidation and cost efficiency, as suggested in Tableau's official documentation for cloud migration strategies.

26. Frage

A client is using the Tableau Content Migration Tool to move content from an old Tableau Server to a new Tableau Server.

Which content will need to be moved using a different tool or process?

- A. Published data sources that use extracts

- B. Published data sources that use live connections
- **C. Tableau Prep flows**
- D. Workbooks

Antwort: C

Begründung:

When migrating content between Tableau servers, certain types of content may require special consideration or different tools for migration:

Tableau Prep Flows: These are specific to Tableau Prep and are not included in the standard content migration capabilities of the Tableau Content Migration Tool. Tableau Prep flows often require separate processes for migration due to their distinct setup and integration with data sources and workflows.

Published Data Sources and Workbooks: These can typically be migrated directly using the Tableau Content Migration Tool, which supports moving published data sources (both live connections and extracts) and workbooks without requiring additional tools.

References:

Tableau Help and Support: Offers comprehensive tutorials and guidelines on using different tools for migrating various types of content, including the specific requirements for migrating Tableau Prep flows which are not covered by the standard content migration tool.

27. Frage

.....

Die Salesforce Analytics-Con-301 Zertifizierungsprüfung ist zur Zeit sehr beliebt bei den IT-Fachleuten. Durch die Salesforce Analytics-Con-301 Zertifizierungsprüfung werden Ihre Lebens-und Arbeitsverhältnisse verbessert. Daneben wird Ihre Position in der IT-Branche gefestigt.
