Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q390-Q395):

NEW QUESTION # 390

What are two denial of service attacks? (Choose two.)

- **A. UDP flooding**
- B. TCP connections
- **C. ping of death**
- D. MITM
- E. code red

Answer: A,C

NEW QUESTION # 391

Which principle is being followed when an analyst gathers information relevant to a security incident to determine the appropriate course of action?

- A. rapid response
- **B. decision making**
- C. due diligence
- D. data mining

Answer: B

Explanation:

Decision making is a principle that guides an analyst to gather information relevant to a security incident to determine the appropriate course of action. Decision making involves identifying the problem, defining the criteria, analyzing the alternatives, and choosing the best solution. Decision making helps an analyst to respond to an incident effectively and efficiently, while minimizing the impact and risk to the organization. Answer:

Explanation:

direct evidence	direct evidence
corroborative evidence	indirect evidence
indirect evidence	corroborative evidence

Explanation:

Graphical user interface, application Description automatically generated

direct evidence
indirect evidence
corroborative evidence

NEW QUESTION # 393

An engineer received an alert affecting the degraded performance of a critical server. Analysis showed a heavy CPU and memory load. What is the next step the engineer should take to investigate this resource usage?

- A. Run "ps -m" to capture the existing state of daemons and map required processes to find the gap.
- B. Run "ps -d" to decrease the priority state of high load processes to avoid resource exhaustion.
- C. Run "ps -u" to find out who executed additional processes that caused a high load on a server.
- **D. Run "ps -ef" to understand which processes are taking a high amount of resources.**

Answer: D

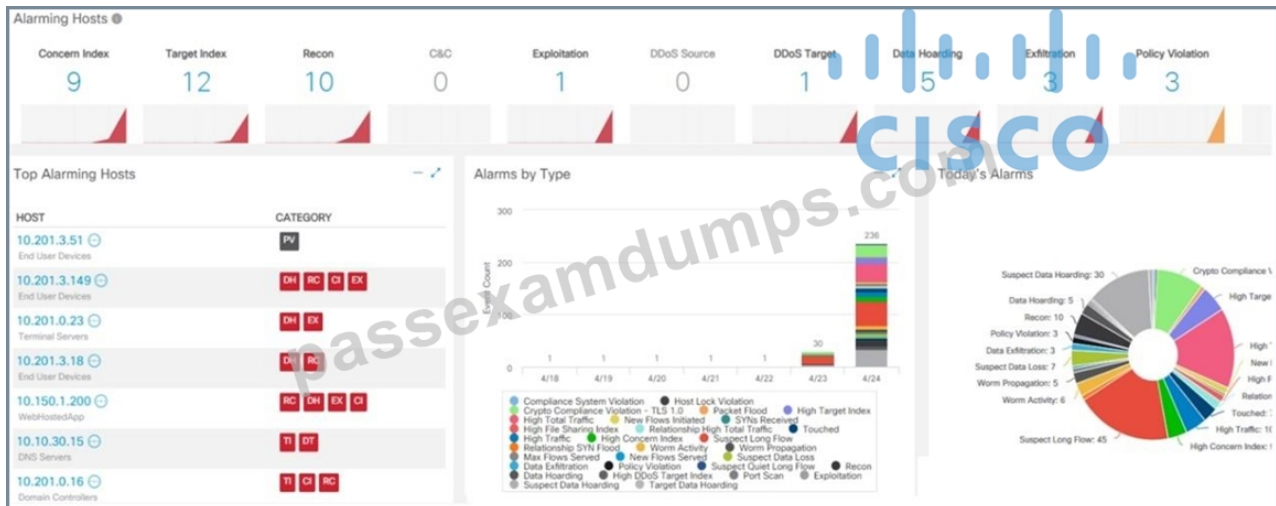

Explanation:

The "ps" command is used to display information about the processes running on a system. The "-ef" option shows the full format listing, which includes the process ID, the user, the CPU and memory usage, the command name, and other details. This can help the

engineer identify which processes are consuming the most resources and causing the degraded performance of the server. The other options are either invalid or irrelevant, as they do not provide the necessary information or perform the required action. Reference=
