NEW QUESTION # 39
Question:
What describes an incident in a storage infrastructure?

- A. Any action that may impact the functionality of the system
- B. Unknown root cause of one or more disruptions to service
- C. Support request to help access an IT resource
- D. Any event that prevents corrections of known errors

Answer: B

Explanation:
An incident is an unplanned disruption of a service or a reduction in its quality, often with an unknown root cause.
Incidents require immediate action to restore service.
Example: SAN switch port down, unexpected storage latency.
* Support requests are typically service requests, not incidents.
* Impact actions are more about changes, not incidents.
* Events preventing corrections might be problems, not incidents.

- C. Number of units of storage available, used, and the cost
- D. Current and historical performance information about IT components and operations
