Customizable mock tests comprehensively and accurately represent the actual Check Point Certified Security Administrator - R82 (156-215.82) certification exam scenario.

CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q133-Q138):

NEW QUESTION # 133

The _____ software blade package uses CPU-level and OS-level sandboxing in order to detect and block malware.

- A. Next Generation Threat Extraction
- B. Next Generation Threat Emulation
- C. Next Generation Firewall

- D. Next Generation Threat Prevention

Answer: B

Explanation:

The Next Generation Threat Emulation software blade package uses CPU-level and OS-level sandboxing in order to detect and block malware¹, p. 41. It emulates files in a virtual environment and inspects their behavior for malicious activity³. Check Point CCSA - R81: Practice Test & Explanation, Check Point Threat Emulation Administration Guide R81

NEW QUESTION # 134

Security Zones do not work with what type of defined rule?

- **A. Manual NAT rule**
- B. Firewall rule
- C. IPS bypass rule
- D. Application Control rule

Answer: A

Explanation:

Security Zones are a feature of Application Control and Identity Awareness that allow you to define groups of network objects based on their level of trust. Security Zones do not work with Manual NAT rules, because Manual NAT rules are applied before the Application Control and Identity Awareness policy is enforced¹. Check Point R81 Security Management Administration Guide

NEW QUESTION # 135

Sticky Decision Function (SDF) is required to prevent which of the following? Assume you set up an Active-Active cluster.

- A. Symmetric routing
- B. Anti-Spoofing
- **C. Failovers**
- D. Asymmetric routing

Answer: C

Explanation:

The Sticky Decision Function (SDF) is required to prevent failovers in an Active-Active cluster. The SDF ensures that the same cluster member handles all connections that belong to a certain session. If the SDF is not enabled, different cluster members may handle different connections of the same session, which may cause a failover or a drop². ClusterXL Administration Guide R81, Check Point CCSA - R81: Practice Test & Explanation

NEW QUESTION # 136

When enabling tracking on a rule, what is the default option?

- A. Detailed Log
- B. Accounting Log
- C. Extended Log
- **D. Log**

Answer: D

Explanation:

When enabling tracking on a rule, the default option is Log. This option generates a log entry for each connection that matches the rule. The log entry contains information such as the source, destination, service, action, and time of the connection. [Logging and Monitoring R81], [Logging and Monitoring]

NEW QUESTION # 137

When logging in for the first time to a Security management Server through SmartConsole, a fingerprint is saved to the:

- A. There is no memory used for saving a fingerprint anyway.
- **B. SmartConsole cache is available for future Security Management Server authentications.**
- C. Security Management Server's /home/.fgpt file and is available for future SmartConsole authentications.
- D. Windows registry is available for future Security Management Server authentications.

Answer: B

Explanation:

When logging in for the first time to a Security Management Server through SmartConsole, a fingerprint is saved to the SmartConsole cache and is available for future Security Management Server authentications. The fingerprint is a unique identifier of the Security Management Server that is used to verify its identity and prevent man-in-the-middle attacks. The SmartConsole cache is a local folder on the client machine that stores temporary files and settings.

NEW QUESTION # 138

.....
