최신 Salesforce Architect Arch-303 무료 샘플문제 (Q42-Q47):

질문 # 42

An Architect to notify by the Business that order conversion dramatically dropped a few hours after go live. Further investigation points out that customers cannot proceed to checkout anymore. The Architect is aware that a custom inventory checks with a third-party API is enforced at the beginning of checkout, and that customers are redirected to the basket page when items are no longer in stock. Which tool can clearly confirm that the problem is indeed caused by the inventory check?

- A. Service Status from Business Manager
- B. Sales Dashboard from Reports and Dashboards
- C. Pipeline Profiler from Business Manager
- D. Realtime Report from Reports and Dashboards

정답: C

설명:

The appropriate tool to verify that the problem is indeed caused by the inventory check at the beginning of checkout is the Pipeline Profiler in Business Manager. This tool allows an architect to analyze the performance of specific code execution paths, including those involving third-party API calls. It helps identify bottlenecks and inefficiencies in the pipeline execution, particularly useful in situations where custom code like inventory checks may impact site functionality. The use of the Pipeline Profiler would enable the architect to pinpoint if the custom inventory check is causing the checkout process to fail or redirect users inappropriately.

질문 # 43

An Architect is configuring a data replication schedule. Which task(s) can be removed in order to reduce replication times?

- A. Static content
- B. Campaign
- C. Storefront URLs
- D. Search Indexes

정답: A

설명:

Reducing the replication times in data synchronization can be effectively achieved by removing or reducing frequency of tasks that are less critical or that do not change frequently. Static content, such as images and static texts that do not change often, can be safely removed from frequent replication schedules (Answer B).

This adjustment will reduce the data load and frequency of updates, thereby speeding up the overall replication process. Unlike dynamic content like campaigns, search indexes, or URLs that might change frequently and impact user experience or site functionality if not updated, static content does not typically necessitate immediate replication, making it a suitable candidate for removal to enhance replication efficiency.

질문 # 44

A new dent is moving from their existing ecommerce platform to B2C Commerce. They have an existing service that connects to the Email Marketing System. The endpoint of the service can directly parse the data posted by the customer from the Storefront page for marketing materials subscriptions. It is required that this service implementation on the B2C Commerce site supports authentication and encoding.

What type should the Architect document this new service as?

- A. SOAP
- B. HTTP Form
- C. HTTP
- D. Generic

정답: C

설명:

For a service that connects to an Email Marketing System where the endpoint can directly parse data posted by the customer from the storefront for marketing material subscriptions, documenting the service as an HTTP service is appropriate. This type of service

will likely involve straightforward HTTP requests with authentication and encoding to ensure data integrity and security. The HTTP service type supports these requirements effectively, facilitating secure, reliable data transmission between the storefront and the email marketing system.

질문 # 45

a B2C Commerce developer has Implemented a job that connects to an SFTP, loops through a specific number of .csv files, and Generates a generic mapping for every file. In order to keep track of the mappings imported, if a generic mapping is created successfully, a custom object instance is created with the .

csv file name. After running the job in the Development instance, the developer checks the Custom Objects in Business Manager and notices there isn't a Custom Object for each csv file that was on SFTP.

What are two possible reasons that some generic mappings were not created? Choose 2 answers

- A. The generic mappings definition need to be replicated from Staging before running the job.
- B. Invalid format in one or more of the .csv files.
- C. The maximum number of generic mappings was reached.
- D. The job needs to run on Staging and then replicate the generic mappings and custom objects on Development

정답: B,C

설명:

Two plausible reasons for some generic mappings not being created despite the SFTP job running are: A) the system reached its limit for the maximum number of generic mappings allowed, and C) there was an invalid format in one or more of the .csv files processed. When the maximum threshold for mappings is reached, the system cannot create additional mappings, thus stopping any further imports from being registered as custom objects. Additionally, if .csv files are incorrectly formatted, the job would fail to create mappings for those files, leading to the absence of corresponding custom objects in Business Manager. It's crucial to ensure that file formats adhere to expected specifications and that system limits are adequately managed to avoid such issues.

질문 # 46

An Architect is documenting the technical design for a single B2C Commerce storefront. The Client has a business requirement to provide pricing that is customized to specific groups:

* 50 different pricing groups of customers

* 30 different pricing groups of employees

* 10 different pricing groups of vendors

Which items should the Architect include in the design in order to set applicable price books based on these requirements? Choose 2 answers

- A. - One customer group and 30 subgroups for customers- One customer group and 10 subgroups for vendors
- B. - One promotion and 50 campaigns for customers- One promotion and 30 campaigns for employees- One promotion and 10 campaigns for vendors
- C. - One campaign and multiple promotions for each customer group
- D. - 50 customer groups for customers- 30 customer groups for employees- 10 customer groups for vendors

정답: C,D

설명:

For handling multiple pricing groups with specific discounts or prices for different customer groups, the optimal approach involves setting up separate customer groups for customers, employees, and vendors (Answer A). This setup allows the storefront to apply specific price books to each group accurately based on their designation. Furthermore, utilizing campaigns and multiple promotions tailored to each customer group (Answer C) facilitates targeted marketing efforts and pricing strategies effectively. These practices ensure that each group receives relevant pricing adjustments and promotional offers, thereby enhancing the shopping experience and managing financial transactions efficiently within Salesforce B2C Commerce.
