

# New Online NSK300 Lab Simulation | Valid NSK300: Netskope Certified Cloud Security Architect 100% Pass

BONUS!!! Download part of VerifiedDumps NSK300 dumps for free: <https://drive.google.com/open?id=14baU3Ivu9V3Az3BfRv9qvGC8dTeXv3o>

If you find the most suitable NSK300 study materials on our website, just add the NSK300 actual exam to your shopping cart and pay money for our products. Our online workers will quickly deal with your orders. We will follow the sequence of customers' payment to send you our NSK300 Guide questions to study right away with 5 to 10 minutes. It is quite easy and convenient for you to download our NSK300 practice engine as well.

Our latest NSK300 exam torrent is comprehensive, covering all the learning content you need to pass the qualifying NSK300 exams. Users with qualifying exams can easily access our web site, get their favorite latest NSK300 study guide, and before downloading the data, users can also make a free demo of our NSK300 Exam Questions for an accurate choice. Users can easily pass the NSK300 exam by learning our NSK300 practice materials, and can learn some new knowledge in this field for you have a brighter future.

## NSK300 Latest Exam Pdf & Valid Braindumps NSK300 Questions

With the help of performance reports of Netskope Certified Cloud Security Architect (NSK300) Desktop practice exam software, you can gauge and improve your growth. You can also alter the duration and Netskope NSK300 Questions numbers in your practice tests. Questions of this Netskope Certified Cloud Security Architect (NSK300) mock test closely resemble the format of the actual test.

### Netskope NSK300 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Cloud Security Solutions:</b> This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Monitoring:</b> This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Netskope Platform Implementation:</b> This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.</li> </ul>

## Netskope Certified Cloud Security Architect Sample Questions (Q48-Q53):

### NEW QUESTION # 48

Review the exhibit.

You installed Directory Importer and configured it to import specific groups of users into your Netskope tenant as shown in the exhibit. One hour after a new user has been added to the domain, the user still has not been provisioned to Netskope. What are three potential reasons for this failure? (Choose three.)

- **A. The server that the Directory Importer is installed on is unable to reach Netskope's add-on endpoint.**
- B. Directory Importer does not support ongoing user syncs; you must manually provision the user.
- **C. The default collection interval is 180 minutes, therefore a sync may not have run yet.**
- D. Active Directory integration is not enabled on your tenant.
- **E. The user is not a member of the group specified as a filter**

**Answer: A,C,E**

Explanation:

The three potential reasons for the failure of a new user not being provisioned to Netskope an hour after being added to the domain could be:

B . The server that the Directory Importer is installed on is unable to reach Netskope's add-on endpoint: If the server cannot connect to Netskope's endpoint, it cannot sync the user data. This could be due to network issues, incorrect configuration, or firewall restrictions.

C . The user is not a member of the group specified as a filter: The Directory Importer may be configured to import users from specific groups only. If the new user is not a member of these groups, they will not be imported into Netskope.

E . The default collection interval is 180 minutes, therefore a sync may not have run yet: The Directory Importer may be scheduled to sync every 180 minutes. If only an hour has passed, the sync process might not have occurred yet, and the user would not be provisioned until the next sync interval.

### NEW QUESTION # 49

A recent report states that users are using non-sanctioned Cloud Storage platforms to share data. Your CISO asks you for a list of aggregated users, applications, and instance IDs to increase security posture. Which Netskope tool would be used to obtain this data?

- A. Behavior Analytics
- B. Applications in Skope IT
- C. Cloud Confidence Index (CCI)
- **D. Advanced Analytics**

**Answer: D**

Explanation:

To obtain a list of aggregated users, applications, and instance IDs, especially when dealing with non-sanctioned Cloud Storage platforms, the Advanced Analytics (A) tool within Netskope would be used.

Advanced Analytics provides in-depth visibility into cloud app usage and activities. It allows security teams to create detailed reports and dashboards that can help identify risks and ensure compliance with company policies by analyzing user behavior, application access, and data movement across the organization<sup>1</sup>.

The capabilities of the Advanced Analytics tool are outlined in Netskope's documentation and resources, which describe its use for gaining insights into cloud application usage and security posture

#### NEW QUESTION # 50

Review the exhibit.

You work for a medical insurance provider. You have Netskope Next Gen Secure Web Gateway deployed to all managed user devices with limited block policies. Your manager asks that you begin blocking Cloud Storage applications that are not HIPAA compliant. Prior to implementing this policy, you want to verify that no business or departmental applications would be blocked by this policy.

Referring to the exhibit, which query would you use in the Edit Widget window to narrow down the results?

- A. Cloud Confidence Compliance neq HIPAA and Cloud Confidence Category is Cloud Storage
- B. SELECT application WHERE 'HIPAA' NOT IN app-cci-compliance AND WHERE 'Cloud Storage' IN category
- C. app-compliance does not contain HIPAA and category must equal Cloud Storage
- D. app-cci-compliance-cert neq 'HIPAA' and category eq 'Cloud Storage'

**Answer: D**

Explanation:

The correct query to use in the Edit Widget window to narrow down the results is option A: "app-cci-compliance-cert neq 'HIPAA' and category eq 'Cloud Storage'". This query filters out applications that are not HIPAA compliant and belong to the Cloud Storage category, ensuring that only non-HIPAA compliant cloud storage applications are displayed in the results. This helps in identifying and blocking such applications as per the manager's request without affecting business or departmental applications. It aligns with Netskope's capabilities to enforce controls and restrictions on high-risk cloud services to help address HIPAA and HITECH compliance, as well as to audit suspected violations with a full cloud and web activity trail<sup>1</sup>.

The reference for constructing such queries can be found in Netskope's official documentation, which provides detailed information on filtering application data to manage compliance findings and view security posture compliance<sup>2</sup>. Additionally, Netskope's resources on HIPAA Cloud Compliance and Risk Insights can be used to understand the compliance and data center certifications related to HIPAA

#### NEW QUESTION # 51

You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs.

How would you accomplish this task?

- A. Use GRE tunnels from the AWS Virtual Private Gateway
- B. Use IPsec tunnels from the AWS Virtual Private Gateway.
- C. Use IPsec tunnels from the AWS Transit Gateway.
- D. Use GRE tunnels from the AWS Transit Gateway.

**Answer: C**

Explanation:

The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of tunnels while providing connectivity for all VPCs is to use IPsec tunnels from the AWS Transit Gateway. This method allows you to use the same Site-to-Site VPN connection to Netskope for multiple VPCs, thus minimizing the number of tunnels required<sup>12</sup>. The AWS Transit Gateway acts as a network transit hub, enabling you to connect your VPCs and on-premises networks through a central point of management and control. Using IPsec tunnels with the AWS Transit Gateway ensures that all VPCs connected to it utilize the same IPsec tunnel between the transit gateway and Netskope POP<sup>1</sup>.

Detailed guidance on configuring IPsec VPN tunnels between your AWS Transit Gateway and Netskope POPs can be found in the Netskope Knowledge Portal<sup>1</sup>. Additionally, the Netskope Community Forum provides insights on setting up IPsec Tunnels for AWS egress traffic, which includes information relevant to deploying Netskope across multiple VPCs<sup>2</sup>.

## NEW QUESTION # 52

A company's architecture includes a server subnet that is logically isolated from the rest of the network with no Internet access, no default gateway, and no access to DNS. New resources can only be provisioned on virtual resources in that segment and there is a firewall that is tunnel-capable securing the perimeter of the segment. The only requirement is to have content filtering for any server that might access the Internet using a browser.

Which two Netskope deployment methods would achieve this requirement? (Choose two.)

- A. Install the Netskope Client on the servers
- B. Deploy a mobile profile on the servers.
- C. Deploy IPsec or GRE tunnels in the segment to steer traffic from the servers to Netskope.
- D. Deploy Data Plane on Premises (DPoP) with a proxy configuration on the servers.

**Answer: C,D**

Explanation:

For a server subnet that is isolated and requires content filtering for any server that might access the Internet using a browser, the two Netskope deployment methods that would meet this requirement are:

B . Deploy Data Plane on Premises (DPoP) with a proxy configuration on the servers: Deploying DPoP would allow the isolated servers to connect to the Netskope cloud for content filtering through a proxy configuration. This setup would enable the servers to have controlled access to the Internet for content filtering purposes without requiring direct Internet access1.

C . Deploy IPsec or GRE tunnels in the segment to steer traffic from the servers to Netskope: By deploying IPsec or GRE tunnels, the traffic from the servers can be securely directed to Netskope for content filtering. This method is suitable for environments where servers do not have direct Internet access, as the tunnel provides a secure path for traffic to reach Netskope's cloud services1.

These deployment methods are designed to work in environments with strict network isolation and provide the necessary content filtering capabilities for servers accessing the Internet.

## NEW QUESTION # 53

.....

Our NSK300 exam materials can help you get the certificate easily. With our NSK300 study questions for 20 to 30 hours, we can claim that you can pass the exam by your first attempt. And our pass rate of the NSK300 learning quiz is high as 98% to 100%. You must muster up the courage to challenge yourself. It is useless if you do not prepare well. You must seize the good chances when it comes. Please remember you are the best. What you need is just our NSK300 training braindumps!
