

First-grade Examcollection DP-700 Free Dumps - Pass DP-700 Exam

P.S. Free & New DP-700 dumps are available on Google Drive shared by TestSimulate: <https://drive.google.com/open?id=1TIRdY4byJVcWFXJB7xDm27t7mSwU4Sd>

It is necessary to strictly plan the reasonable allocation of DP-700 test time in advance. Many students did not pay attention to the strict control of time during normal practice, which led to panic during the process of examination, and even some of them are not able to finish all the questions. If you purchased DP-700 learning dumps, each of your mock exams is timed automatically by the system. DP-700 learning dumps provide you with an exam environment that is exactly the same as the actual exam. It forces you to learn how to allocate exam time so that the best level can be achieved in the examination room. At the same time, DP-700 Test Question will also generate a report based on your practice performance to make you aware of the deficiencies in your learning process and help you develop a follow-up study plan so that you can use the limited energy where you need it most. So with DP-700 study tool you can easily pass the exam.

Microsoft DP-700 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Ingest and transform data: This section of the exam measures the skills of Data Engineers that cover designing and implementing data loading patterns. It emphasizes preparing data for loading into dimensional models, handling batch and streaming data ingestion, and transforming data using various methods. A skill to be measured is applying appropriate transformation techniques to ensure data quality.
Topic 2	<ul style="list-style-type: none"> • Monitor and optimize an analytics solution: This section of the exam measures the skills of Data Analysts in monitoring various components of analytics solutions in Microsoft Fabric. It focuses on tracking data ingestion, transformation processes, and semantic model refreshes while configuring alerts for error resolution. One skill to be measured is identifying performance bottlenecks in analytics workflows.

Topic 3	<ul style="list-style-type: none"> • Implement and manage an analytics solution: This section of the exam measures the skills of Microsoft Data Analysts regarding configuring various workspace settings in Microsoft Fabric. It focuses on setting up Microsoft Fabric workspaces, including Spark and domain workspace configurations, as well as implementing lifecycle management and version control. One skill to be measured is creating deployment pipelines for analytics solutions.

100% Pass Quiz DP-700 - Implementing Data Engineering Solutions Using Microsoft Fabric High Hit-Rate Examcollection Free Dumps

Some candidates may be afraid of the difficult questions in the DP-700 study materials for they are hard to be understood and memorized. But if you want to pass the exam perfectly, then you have to pay more attention on them. You must cultivate the good habit of reviewing the difficult parts of our DP-700 Practice Guide, which directly influences your passing rate. What is more, our experts never stop researching the questions of the real DP-700 exam. So our DP-700 exam questions are always the latest for you to download.

Microsoft Implementing Data Engineering Solutions Using Microsoft Fabric Sample Questions (Q104-Q109):

NEW QUESTION # 104

You are implementing a medallion architecture in a Fabric lakehouse.

You plan to create a dimension table that will contain the following columns:

- * ID
- * CustomerCode
- * CustomerName
- * CustomerAddress
- * CustomerLocation
- * ValidFrom
- * ValidTo

You need to ensure that the table supports the analysis of historical sales data by customer location at the time of each sale. Which type of slowly changing dimension (SCD) should you use?

- A. Type 0
- B. Type 3
- C. Type 1
- **D. Type 2**

Answer: D

NEW QUESTION # 105

You are building a data loading pattern by using a Fabric data pipeline. The source is an Azure SQL database that contains 25 tables. The destination is a lakehouse.

In a warehouse, you create a control table named ControlObject as shown in the exhibit. (Click the Exhibit tab.) You need to build a data pipeline that will support the dynamic ingestion of the tables listed in the control table by using a single execution.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

□

Answer:

Explanation:

□

Explanation:

□

NEW QUESTION # 106

HOTSPOT

You have a Fabric workspace that contains an eventstream named EventStream1.

You discover that an EventStream1 transformation fails.

You need to find the following error information:

The error details, including the occurrence time

The total number of errors

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 107

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a KQL database that contains two tables named Stream and Reference. Stream contains streaming data in the following format.

Reference contains reference data in the following format.

Both tables contain millions of rows.

You have the following KQL queryset.

You need to reduce how long it takes to run the KQL queryset.

Solution: You change project to extend.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Using extend retains all columns in the table, potentially increasing the size of the output unnecessarily. project is more efficient because it selects only the required columns.

NEW QUESTION # 108

You have a Fabric workspace that contains a warehouse named Warehouse1. Data is loaded daily into Warehouse1 by using data pipelines and stored procedures.

You discover that the daily data load takes longer than expected.

You need to monitor Warehouse1 to identify the names of users that are actively running queries.

Which view should you use?

- A. queryinsights.frequently_run_queries
- B. queryinsights.long_running_queries
- C. sys.dm_exec_sessions
- D. sys.dm_exec_connections
- E. sys.dm_exec_requests

Answer: C

Explanation:

sys.dm_exec_sessions provides real-time information about all active sessions, including the user, session ID, and status of the session. You can filter on session status to see users actively running queries.
