GH-900 Pass Rate - GH-900 Free Practice Exams

Will you feel nervous for your exam? If you do, you can choose us, and we will help you reduce your nerves. GH-900 exam braindumps can stimulate the real exam environment, so that you can know the procedure for the real exam, and your confidence for the exam will also be strengthened. In addition, in order to build up your confidence for GH-900 Exam Materials, we are pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you full refund. You can receive your downloading link and password for GH-900 training materials within ten minutes after payment.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.
Topic 2	<ul style="list-style-type: none"> • Privacy, Security, and Administration: This domain measures skills of Security Administrators and Organization Managers in securing and administering GitHub environments. It covers ensuring repository security through branch protection rules, using security tools like Dependabot, managing access and permissions at repository and organization levels, creating and managing organizations, setting up organization-level security, and overseeing teams and members.
Topic 3	<ul style="list-style-type: none"> • Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.
Topic 4	<ul style="list-style-type: none"> • Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.

Microsoft GitHub Foundations Sample Questions (Q115-Q120):

NEW QUESTION # 115

You are part of a global development team working on a shared project. Some team members are offline or in different time zones. You want to ensure everyone can work independently while still contributing to the same codebase. You also want to maintain a full history of the project, including who made which changes and when. Which features or characteristics of Git support this collaborative workflow effectively? (Choose three.)

- A. Git is a distributed version control system where each contributor has a full copy of the project
- B. Git requires a continuous internet connection to function correctly
- C. Git keeps a complete timeline of changes, including who made them and why
- D. Git stores only the latest version of the code and discards historical data
- E. Git allows developers to work independently using branches

Answer: A,C,E

Explanation:

Git enables seamless collaboration by allowing developers to work independently using branches while maintaining a complete history of changes, ensuring transparency. Since Git is distributed, each contributor has a full copy of the repository, enabling offline work and eliminating reliance on a central server.

Option B is CORRECT because Branching lets developers work on different features or fixes simultaneously without interfering with the main codebase. Changes can be merged later when they are ready.

Option C is CORRECT because Git is a distributed version control system (DVCS). Every contributor has the entire project history locally, allowing them to work independently of others.

Option D is CORRECT because Git maintains a full history of all commits, tracking when changes were made, who made them, and often the reason behind them (through commit messages).

This provides transparency and accountability in a collaborative workflow.

NEW QUESTION # 116

Which of the following is a key characteristic of GitHub Projects?

- A. Ability to enforce required fields
- B. Ability to import Gantt charts from Microsoft Project
- C. Ability to visualize the commit history
- **D. Ability to create and customize multiple views**

Answer: D

Explanation:

GitHub Projects is a flexible and powerful tool for project management that allows users to manage their work with ease. One of the key characteristics of GitHub Projects is the ability to create and customize multiple views. This feature enables teams to tailor the project management experience to their specific workflow needs, offering various ways to visualize tasks, issues, and work items. Custom Views: You can set up different views like Kanban boards, tables, or timelines, and apply filters to show only what is relevant for a particular aspect of the project. This customization allows teams to organize their work in a way that best suits their processes, making it a highly adaptable project management tool.

NEW QUESTION # 117

As a repository admin, which alerts can you see from the security tab of a repository? (Choose three.)

- A. Push Protection Bypass
- **B. Dependabot**
- **C. Code Scanning**
- **D. Secret Scanning**
- E. Branch Protection

Answer: B,C,D

Explanation:

You can find security alerts from Dependabot, Secret scanning, and Code scanning under your repository's Security tab. Security alerts for a repository are visible to people with write, maintain, or admin access to the repository and, when the repository is owned by an organization, organization owners.

<https://docs.github.com/en/repositories/managing-your-repositorys-settings-and-features/enabling-features-for-your-repository/managing-security-and-analysis-settings-for-your-repository>

NEW QUESTION # 118

What does a CODEOWNERS file do in a repository?

- A. Defines access permissions for the repository
- **B. Sets the reviewers for pull requests automatically**
- C. Restricts who can edit specific files
- D. Requires peer code review for code changes

Answer: B

Explanation:

The CODEOWNERS file in a GitHub repository is used to define individuals or teams that are responsible for specific parts of the codebase. When changes are made to files or directories that match the patterns specified in the CODEOWNERS file, GitHub automatically requests reviews from the listed code owners.

Setting Reviewers Automatically:

Option D is correct because the primary purpose of a CODEOWNERS file is to automatically set reviewers for pull requests that affect the specified files or directories. This ensures that the appropriate team members are notified and review the changes before they are merged.

NEW QUESTION # 119

Which of the following outcomes can be achieved with a branch protection rule?

- A. Block code pushes that contain hardcoded secrets.
- **B. Require approval before merging changes.**
- C. Require two-factor authentication (2FA) by code contributors.
- D. Restrict who can view the branch.

Answer: B

Explanation:

Managing a branch protection rule

You can create a branch protection rule to enforce certain workflows for one or more branches, such as requiring an approving review or passing status checks for all pull requests merged into the protected branch.
