AZ-500 Exam Sample Online, AZ-500 Exam Actual Questions

Passing the Microsoft AZ-500 certification exam is necessary for professional development, and employing real Microsoft AZ-500 Exam Dumps can assist applicants in reaching their professional goals. These actual AZ-500 questions assist students in discovering areas in which they need improvement, boost confidence, and lower anxiety. Candidates will breeze through Microsoft AZ-500

Certification examination with flying colors and advance to the next level of their jobs if they prepare with updated Microsoft AZ-500 exam questions.

Microsoft AZ-500 Exam covers a wide range of topics related to cloud security, including managing identity and access, implementing platform protection, securing data and applications, and managing security operations. Candidates should have a strong understanding of Azure services and technologies, as well as experience in implementing security controls in a cloud environment.

There are various topics included in Microsoft AZ-500 that you should master during your preparation time. They are as follows:

- Manage Security Operations;
- Implement Platform Protection.
- Manage Identity and Access;
- Secure Data and Applications;

All of these domains are separated into different sections and each has its own percentage rate of occurring during your test. Therefore, we recommend that you check the official certification page to know the additional details that will help you during your preparation.

Microsoft Azure Security Technologies Sample Questions (Q463-Q468):

NEW QUESTION # 463
You have 15 Azure virtual machines in a resource group named RG1.
All virtual machines run identical applications.
You need to prevent unauthorized applications and malware from running on the virtual machines.
What should you do?

- A. Apply an Azure policy to RGI.
- B. From Microsoft Defender for Cloud, configure adaptive application controls.
- C. Apply a resource lock to RGI.
- D. Configure Azure Active Directory (Azure AD) Identity Protection.

Answer: B

Explanation:
Microsoft Defender for Cloud helps you prevent, detect, and respond to threats. Defender for Cloud gives you increased visibility into, and control over, the security of your Azure resources. It provides integrated security monitoring and policy management across your Azure subscriptions. It helps detect threats that might otherwise go unnoticed, and works with a broad ecosystem of security solutions.
Defender for Cloud helps you optimize and monitor the security of your virtual machines by:
Providing security recommendations for the virtual machines. Example recommendations include: apply system updates, configure ACLs endpoints, enable antimalware, enable network security groups, and apply disk encryption.
Monitoring the state of your virtual machines.

NEW QUESTION # 464
You need to configure SQLDB1 to meet the data and application requirements.
Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:
1 - From the Azure portal, create an Azure AD administrator for LitwareSQLServer1
2 - Connect to SQLDB1 by using SSMS
3 - In SQLDB1, create contained database users

NEW QUESTION # 465

You have the Azure key vaults shown in the following table.
KV1 stores a secret named Secret1 and a key for a managed storage account named Key1.
You back up Secret1 and Key1.
To which key vaults can you restore each backup? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 466
Use the following login credentials as needed:
To enter your username, place your cursor in the Sign in box and click on the username below.
To enter your password, place your cursor in the Enter password box and click on the password below.
Azure Username: User1-10598168@ExamUsers.com
Azure Password: Ag1Bh9!#Bd
The following information is for technical support purposes only:
Lab Instance: 10598168

You need to collect all the audit failure data from the security log of a virtual machine named VM1 to an Azure Storage account.
To complete this task, sign in to the Azure portal.
This task might take several minutes to complete You can perform other tasks while the task completes.
See the explanation below.

Answer:

Explanation:
Explanation
Step 1: Create a workspace
Azure Monitor can collect data directly from your Azure virtual machines into a Log Analytics workspace for detailed analysis and correlation.
1. In the Azure portal, select All services. In the list of resources, type Log Analytics. As you begin typing, the list filters based on your input. Select Log Analytics workspaces.
2. Select Create, and then select choices for the following items:
3. After providing the required information on the Log Analytics workspace pane, select OK.
While the information is verified and the workspace is created, you can track its progress under Notifications from the menu.
Step 2: Enable the Log Analytics VM Extension
Installing the Log Analytics VM extension for Windows and Linux allows Azure Monitor to collect data from your Azure VMs.
1. In the Azure portal, select All services found in the upper left-hand corner. In the list of resources, type Log Analytics. As you begin typing, the list filters based on your input. Select Log Analytics workspaces.
2. In your list of Log Analytics workspaces, select DefaultWorkspace (the name you created in step 1).
3. On the left-hand menu, under Workspace Data Sources, select Virtual machines.
4. In the list of Virtual machines, select a virtual machine you want to install the agent on. Notice that the Log Analytics connection status for the VM indicates that it is Not connected.
5. In the details for your virtual machine, select Connect. The agent is automatically installed and configured for your Log Analytics workspace. This process takes a few minutes, during which time the Status shows Connecting.
After you install and connect the agent, the Log Analytics connection status will be updated with This workspace.

NEW QUESTION # 467
You have an Azure subscription. The subscription contains Azure virtual machines that run Windows Server 2016.
You need to implement a policy to ensure that each virtual machine has a custom antimalware virtual machine extension installed.
How should you complete the policy? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: DeployIfNotExists

DeployIfNotExists executes a template deployment when the condition is met.

Box 2: Template

The details property of the DeployIfNotExists effects has all the subproperties that define the related resources to match and the template deployment to execute.

Deployment [required]

This property should include the full template deployment as it would be passed to the Microsoft.Resources/deployment References: https://docs.microsoft.com/en-us/azure/governance/policy/concepts/effects
