Workday-Pro-HCM-Reporting新版題庫上線 - 最新Workday-Pro-HCM-Reporting考古題

有很多網站提供資訊Workday的Workday-Pro-HCM-Reporting考試，為你提供 Workday的Workday-Pro-HCM-Reporting考試認證和其他的培訓資料，VCESoft是唯一的網站，為你提供優質的Workday的Workday-Pro-HCM-Reporting考試認證資料，在VCESoft指導和幫助下，你完全可以通過你的第一次Workday的Workday-Pro-HCM-Reporting考試，我們VCESoft提供的試題及答案是由現代和充滿活力的資訊技術專家利用他們的豐富的知識和不斷積累的經驗，為你的未來在IT行業更上一層樓。

Workday Workday-Pro-HCM-Reporting 考試大綱：

主題	簡介
主題 1	• Human Capital Management: Human capital is a concept used by economists and social scientists to designate personal attributes considered useful in the production process. Candidates are assessed for their HCM skills.

主題 2	• Calculated Fields: This domain assesses the skills of candidates regarding calculations. A calculation is a deliberate process that transforms one or more inputs into one or more results.
主題 3	• Reporting: Business Reporting is used to inform management and investors of information such as financial performance, the market outlook, or the performance of a specific department. Candidates are tested for their business reporting skills.
主題 4	• Composite Reporting: This domain of the Workday Pro HCM Reporting Certification exam measures the skills of HRIS Analysts and covers building and managing Composite Reports to deliver advanced insights across Workday HCM data.

最新的 Workday Pro Certifications Workday-Pro-HCM-Reporting 免費考試真題 (Q22-Q27):

問題 #22
A report that uses an indexed data source is running slowly for an HR analyst. The report is sorted by the Worker object field. What can you do to improve the sorting performance?

- A. Change the data source on the report
- B. Create a calculated field that only pulls the first name of the worker
- C. Select the Sort by First Accessible Column checkbox
- D. Sort by the Full Name (text) field instead

答案：D

解題說明：
When reports use Indexed Data Sources, performance issues can arise if sorting is attempted on fields that are not indexed. In the case of the Worker object, sorting directly by the Worker object field is slower. Workday best practice is to sort by text-based fields such as the "Full Name (text)" field, which improves query performance because it leverages indexed fields.
From the Workday reporting materials:
*"For indexed data sources, performance improves when sorting by text fields such as Full Name (text), instead of object fields. Sorting by object fields causes slower performance, whereas text-based fields use the

問題 #23
A user needs to view additional data on the delivered Headcount By Job Profile report.
What should you recommend?

- A. Export the standard report to a data warehouse
- B. Create a custom report from scratch
- C. Copy and modify the standard report
- D. Edit the standard report

答案：C

解題說明：
Workday delivers many standard (delivered) reports that are available to all customers. These reports are a great starting point but are not editable directly. If the delivered report does not meet your requirements, you should copy it and then modify the copy to create a custom report. This ensures that you retain the delivered report as-is, while still tailoring the report output to your business needs.
From the Workday Module 1 and 2 Reporting sections:
"Workday delivers standard reports that are available for all customers. If necessary, you can copy many of the Workday-delivered reports to create a custom report and modify it as needed."
"There still may not be a report that meets my specific needs though. In that case, I can either create a report from scratch or copy a delivered report and make changes."
"Standard reports are already available in all customer tenants and span across the functional areas in Workday. Workday creates standard reports using either the report writer tool or XpressO. However, you can copy and modify reports created with report writer as needed." Therefore, the correct recommendation is to copy and modify the delivered Headcount By Job Profile report

(Option D) instead of editing the original.

問題 #24

Refer to the following scenario to answer the question below.

You have prepared the following matrix report for a recruiting manager.

The recruiting manager would like to view the top ten hiring sources, rather than just three.

How can you adjust the report definition to address this requirement?

- A. Edit the Axis Scale on the Output tab.
- B. Edit the Maximum Number of Rows field.
- C. Configure a Field Values group on the Group by Field.
- D. Edit the Sort Rows field on the Row Grouping column.

答案：B

解題說明：

In Workday matrix reports, the number of rows returned is controlled by the Maximum Number of Rows setting. By default, reports may limit output rows (for example, showing only the top 3). To display more results-such as the top 10 hiring sources-you must increase this value in the report definition.

From the Workday Reporting documentation:

"You can limit or expand the number of rows displayed in a matrix report by editing the Maximum Number of Rows field."

"To display more than the default, update the value in the report definition." Therefore, the correct way to adjust this report to display the top 10 hiring sources is B. Edit the Maximum Number of Rows field.

問題 #25

The Chief Learning Officer wants you to build a report that lists all current learning content and any information you have relating to ratings and popularity.

How should you find the relevant fields and data sources that are available for you to create this report?

- A. Run the Workday Standard Reports report
- B. Access the View Custom Report task
- C. Run the Business Object Details report
- D. View the Learning dashboard

答案：C

解題說明：

To locate the correct fields and data sources for a custom report, Workday provides the Business Object Details report. This report displays all available fields, relationships, and related business objects that can be included in reporting. It ensures report writers can confirm which fields (e.g., Learning Content, Ratings, Popularity) are accessible for use.

From the Workday Reporting documentation:

"The report data source provides the view into the primary business object. This object gives you access to class report fields as well as links to related business objects."

"The Business Object Details report is used to view which fields are available for reporting." Therefore, the correct answer is B. Run the Business Object Details report.

問題 #26

You are building a report that shows employee performance ratings and their associated performance review details. The report uses the Performance Review primary business object. Using a calculated field, what formula should you use to retrieve the employee's job title from the related Worker business object?

- A. Aggregate Related Instances
- B. Lookup Related Value
- C. Lookup Range Band
- D. Evaluate Expression Band

答案：B

解題說明：

The correct choice is Lookup Related Value, because this function allows you to retrieve a field from a related business object that is not directly stored on your primary object. In this scenario, the primary business object is Performance Review, which holds performance-related data but not job-related data such as Job Title. Since Job Title resides on the Worker business object, you need to link from Performance Review to Worker and then retrieve Job Title.

The Workday reporting guide explains: "Lookup Related Value - Returns a field from a related business object. Use this to bring data from associated objects into a report when the field is not directly available on the primary object." . This ensures the Performance Review data can be combined with Job Title for meaningful insights.

By contrast, Aggregate Related Instances is used to roll up multiple related values, Range Band applies thresholds, and Evaluate Expression Band is used for conditional ranges, not cross-object retrieval.

問題 #27
