Oracle Cloud Infrastructure 2025 Generative AI Professional Sample Questions (Q49-Q54):

NEW QUESTION # 49

What is the purpose of embeddings in natural language processing?

- A. To translate text into a different language
- B. To increase the complexity and size of text data
- C. To create numerical representations of text that capture the meaning and relationships between words or phrases
- D. To compress text data into smaller files for storage

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Embeddings in NLP are dense, numerical vectors that represent words, phrases, or sentences in a way that captures their semantic meaning and relationships (e.g., "king" and "queen" being close in vector space). This enables models to process text mathematically, making Option C correct. Option A is false, as embeddings simplify processing, not increase complexity. Option B relates to translation, not embeddings' primary purpose. Option D is incorrect, as embeddings aren't primarily for compression but for representation.

OCI 2025 Generative AI documentation likely covers embeddings under data preprocessing or vector databases.

NEW QUESTION # 50

How are prompt templates typically designed for language models?

- A. To work only with numerical data instead of textual content
- B. As complex algorithms that require manual compilation
- C. To be used without any modification or customization
- D. As predefined recipes that guide the generation of language model prompts

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Prompt templates are predefined, reusable structures (e.g., with placeholders for variables) that guide LLM prompt creation, streamlining consistent input formatting. This makes Option B correct. Option A is false, as templates aren't complex algorithms but simple frameworks. Option C is incorrect, as templates are customizable. Option D is wrong, as they handle text, not just numbers. Templates enhance efficiency in prompt engineering.

OCI 2025 Generative AI documentation likely covers prompt templates under prompt engineering or LangChain tools.

Here is the next batch of 10 questions (21-30) from your list, formatted as requested with detailed explanations. The answers are based on widely accepted principles in generative AI and Large Language Models (LLMs), aligned with what is likely reflected in the Oracle Cloud Infrastructure (OCI) 2025 Generative AI documentation. Typographical errors have been corrected for clarity.

NEW QUESTION # 51

How are fine-tuned customer models stored to enable strong data privacy and security in the OCI Generative AI service?

- A. Stored in an unencrypted form in Object Storage
- B. Stored in Key Management service
- C. Stored in Object Storage encrypted by default
- D. Shared among multiple customers for efficiency

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation=

In OCI, fine-tuned models are stored in Object Storage, encrypted by default, ensuring privacy and security per cloud best practices-Option B is correct. Option A (shared) violates privacy. Option C (unencrypted) contradicts security standards. Option D (Key Management) stores keys, not models. Encryption protects customer data.

OCI 2025 Generative AI documentation likely details storage security under fine-tuning workflows.

NEW QUESTION # 52

How does the temperature setting in a decoding algorithm influence the probability distribution over the vocabulary?

- A. Increasing the temperature removes the impact of the most likely word.
- **B. Increasing the temperature flattens the distribution, allowing for more varied word choices.**
- C. Decreasing the temperature broadens the distribution, making less likely words more probable.
- D. Temperature has no effect on probability distribution; it only changes the speed of decoding.

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation=

Temperature adjusts the softmax distribution in decoding. Increasing it (e.g., to 2.0) flattens the curve, giving lower-probability words a better chance, thus increasing diversity-Option C is correct. Option A exaggerates-top words still have impact, just less dominance. Option B is backwards-decreasing temperature sharpens, not broadens. Option D is false-temperature directly alters distribution, not speed. This controls output creativity.

OCI 2025 Generative AI documentation likely reiterates temperature effects under decoding parameters.

NEW QUESTION # 53

Which is a key advantage of using T-Few over Vanilla fine-tuning in the OCI Generative AI service?

- A. Increased model interpretability
- **B. Faster training time and lower cost**
- C. Enhanced generalization to unseen data
- D. Reduced model complexity

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation=

T-Few, a Parameter-Efficient Fine-Tuning method, updates fewer parameters than Vanilla fine-tuning, leading to faster training and lower computational costs-Option D is correct. Option A (complexity) isn't directly affected-structure remains. Option B (generalization) may occur but isn't the primary advantage. Option C (interpretability) isn't a focus. Efficiency is T-Few's hallmark. OCI 2025 Generative AI documentation likely compares T-Few and Vanilla under fine-tuning benefits.
