## HPE Campus Access Switching Expert Written Exam Sample Questions (Q83-Q88):

### NEW QUESTION # 83

The new CTO has set a standard of using a passphrase TACACS for the switch that is 64 characters long for advanced security. What is the issue with this policy?

- A. The organization should not be using TACACS for security policy
- B. The standard should be 128 characters long
- C. Most organizations use simple words
- D. This is not technically possible

**Answer: D**

Explanation:

On AOS-CX, the maximum supported TACACS+ key length is 32 characters. A 64-character passphrase cannot be configured, so the CTO's policy is not technically possible.

### NEW QUESTION # 84

A client would like to use the HPE Aruba Networking Switch MultiEdit Software function in HPE Aruba Networking Central. Which option is available?

- A. Use CLI scripts and apply them to selected switches.
- B. Run the same NAE scripts for selected switches.
- C. Use templates and apply them to selected switches.
- D. Apply a configuration to an interface range for selected switches.

**Answer: A**

Explanation:

The MultiEdit function in HPE Aruba Networking Central allows administrators to push CLI scripts and apply them to selected switches in bulk. This provides flexibility to make consistent configuration changes across multiple devices simultaneously.

### NEW QUESTION # 85

Exhibit.

An end-to-end QoS design needs to be implemented for wired and wireless. What is needed on the LAN side to maintain the correct DSCP tags?

- A. to create a custom DSCP mapping as WLAN DSCP values are different
- B. to create a WMM to DSCP mapping on the WLAN side
- C. to create a WMM to DSCP mapping on the LAN Edge
- D. to trust at DSCP-marked packets in the QoS interior ports

**Answer: D**

### NEW QUESTION # 86

Which commands will permit read-only access to a user with physical access to an AOS-CX switch?

- A. 

```
user helpdesk group read-only password plaintext Aruba123!  
!  
aaa authentication login local  
aaa authorization commands console local
```
- B. 

```
user helpdesk group operators password plaintext Aruba123!  
!  
aaa authentication login local  
aaa authorization commands tty0 local
```
- C. 

```
user helpdesk group operators password plaintext Aruba123!  
!  
aaa authentication login local  
aaa authorization commands console local
```
- D. 

```
user helpdesk group read-only password plaintext Aruba123!  
!  
aaa authentication login local  
aaa authorization commands tty0 local
```

**Answer: A**

Explanation:

To provide read-only access, the user must be assigned to the read-only group, not operators.

This ensures the user has local authentication and is restricted to read-only commands when accessing the switch console.

### NEW QUESTION # 87

Refer to the exhibit.

In the given example AGG-SW1 and AGG-SW2 use CX 8325 in VSX and Edge-1 with CX 6200F.

You want to avoid sub-optimal pathing and ISL traffic for the VSX and upstream routers R1 and R2.

What is the HPE Aruba Networking recommended solution for the SVIs on the VSX switches connected to R1 and R2?

- A. Configure the VSX SVI using the VRRP virtual-ip.
- B. Configure the VSX SVI using the active-forwarding.
- C. Configure the VSX SVI using the active-gateway.
- D. Configure the VSX SVI using the unicast IP.

**Answer: C**

Explanation:

In an AOS-CX VSX design, using active-gateway for SVIs ensures both VSX peers respond with the same virtual IP and virtual MAC. This avoids asymmetric routing, sub-optimal pathing, and prevents unnecessary ISL traffic between VSX peers. It is the HPE Aruba Networking recommended best practice for SVIs connected to upstream routers like R1 and R2.
