### **WGU Digital Forensics in Cybersecurity (D431/C840) Course Exam Sample Questions (Q74-Q79):**

#### **NEW QUESTION # 74**

Tom saved a message using the least significant bit (LSB) method in a sound file and uploaded this sound to his own website. What is the carrier in this example?

- A. The message
- B. Tom's website
- **C. The sound file**
- D. The least significant bit method

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In steganography, the carrier is the file or medium used to hide the secret message. In this example, the sound file is the carrier because it contains the hidden message embedded using the least significant bit method. The message is the payload, and the website is merely the distribution platform.

\* LSB is the embedding technique, not the carrier.

\* The message is the payload, not the carrier.

\* The website is not involved in data hiding.

NIST and steganography references clearly define the carrier as the container holding the hidden data.

#### **NEW QUESTION # 75**

Which policy is included in the CAN-SPAM Act?

- A. Email sender must provide a method for recipients to opt out of future emails without charge
- B. Email sender must verify the recipient's consent before sending
- C. Email sender must include recipient IP address in the email header
- D. Email sender must encrypt all outgoing emails

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The CAN-SPAM Act requires that commercial emails include a clear and conspicuous mechanism allowing recipients to opt out of receiving future emails. This opt-out method cannot require payment or additional steps that would discourage recipients.

\* The act aims to reduce unsolicited commercial emails and spam.

\* Compliance is critical for lawful email marketing and forensic investigations involving email misuse.

Reference:U.S. federal law and cybersecurity policies reference CAN-SPAM provisions for email communications.

\* Photographic documentation is a standard step in forensic protocols.

\* It ensures the scene is accurately recorded.

Reference:According to forensic investigation standards (NIST SP 800-86), photographing the scene is the initial action upon arrival.

#### NEW QUESTION # 78

Which type of storage format should be transported in a special bag to reduce electrostatic interference?

- A. Magnetic media
- B. Optical discs
- C. Flash drives
- D. Solid-state drives

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Magnetic media such as hard drives and magnetic tapes are sensitive to electrostatic discharge (ESD), which can damage data. They must be transported in anti-static bags or containers to reduce the risk of electrostatic interference.

\* SSDs and flash drives are less vulnerable to ESD but still benefit from proper packaging.

\* Proper handling protocols prevent unintentional data loss or corruption.

Reference: NIST SP 800-101 and forensic evidence handling standards specify anti-static packaging for magnetic storage media.
