

ISC CISSP Latest Dumps Free, Exam CISSP Cram

DOWNLOAD the newest FreeDumps CISSP PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1Cp4qzqAQ3RmrYImZlvv5et8PGeCFCBw>

Our CISSP practice dumps are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These CISSP training materials win honor for our company, and we treat it as our utmost privilege to help you achieve your goal. Meanwhile, you cannot divorce theory from practice, but do not worry about it, we have CISSP stimulation questions for you, and you can both learn and practice at the same time.

Our CISSP practice tests have established impressive recognition throughout the industry, diversified modes of learning enables the CISSP exam candidates to capture at the real exam scenario. Tremendous quality of our CISSP products makes the admirable among the professionals. Our practice tests are on demand, attending the needs of CISSP Exams more comprehensively and dynamically as well. Lift up your learning tendency with FreeDumps practice tests training. Conceptual understanding matters the most for your success, technical excellence is certain with FreeDumps training as our experts keep it on high priority.

Exam CISSP Cram & CISSP Most Reliable Questions

The second form is Certified Information Systems Security Professional (CISSP) (CISSP) web-based practice test which can be accessed through online browsing. The CISSP web-based practice test is supported by browsers like Firefox, Microsoft Edge, ISC Chrome, and Safari. You don't need to install any plugins or software to attempt the CISSP web-based practice test. This online ISC CISSP exam is also compatible with all operating systems.

ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q676-Q681):

NEW QUESTION # 676

Proxies works by transferring a copy of each accepted data packet from one network to another, thereby masking the:

- A. data's origin.
- B. data's payload.

- C. data's details.
- D. data's owner.

Answer: A

Explanation:

The application firewall (proxy) relays the traffic from a trusted host running a specific application to an untrusted server. It will appear to the untrusted server as if the request originated from the proxy server.

"Data's payload" is incorrect. Only the origin is changed. "Data's details" is incorrect. Only the origin is changed. "Data's owner" is incorrect. Only the origin is changed.

NEW QUESTION # 677

Sam is the security Manager of a financial institute. Senior management has requested he performs a risk analysis on all critical vulnerabilities reported by an IS auditor. After completing the risk analysis, Sam has observed that for a few of the risks, the cost benefit analysis shows that risk mitigation cost (countermeasures, controls, or safeguard) is more than the potential lost that could be incurred. What kind of a strategy should Sam recommend to the senior management to treat these risks?

- A. Risk Avoidance
- **B. Risk Acceptance**
- C. Risk Mitigation
- D. Risk transfer

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Risk Acceptance means the company understands the level of risk it is faced with, as well as the potential cost of damage, and decides to just live with it and not implement the countermeasure. Many companies will accept risk when the cost/benefit ratio indicates that the cost of the countermeasure outweighs the potential loss value.

Risk acceptance should be based on several factors. For example, is the potential loss lower than the countermeasure? Can the organization deal with the "pain" that will come with accepting this risk? This second consideration is not purely a cost decision, but may entail noncost issues surrounding the decision.

For example, if we accept this risk, we must add three more steps in our production process. Does that make sense for us? Or if we accept this risk, more security incidents may arise from it, and are we prepared to handle those?

Incorrect Answers:

A: Risk mitigation is to implement countermeasures to protect against the risk. This does not refer to the accepting of known risks because the cost benefit analysis shows that risk mitigation cost (countermeasures, controls, or safeguard) is more than the potential lost that could be incurred.

C: Risk avoidance is where a company removes the risk. For example, by disabling a service or removing an application deemed to be a risk. This does not refer to the accepting of known risks because the cost benefit analysis shows that risk mitigation cost (countermeasures, controls, or safeguard) is more than the potential lost that could be incurred.

D: Risk transference is where you assign the risk to someone else; for example, by purchasing insurance.

This would transfer the risk to the insurance company. This does not to the accepting of known risks because the cost benefit analysis shows that risk mitigation cost (countermeasures, controls, or safeguard) is more than the potential lost that could be incurred.

NEW QUESTION # 678

Why is data classification control important to an organization?

- A. To control data retention in alignment with organizational policies and regulation
- **B. To ensure security controls align with organizational risk appetite**
- C. To enable data discovery
- D. To ensure its integrity, confidentiality and availability

Answer: B

Explanation:

The main reason why data classification control is important to an organization is to ensure that the security controls align with the organizational risk appetite. Data classification control is the process that involves identifying, categorizing, and labeling the data based on its sensitivity, value, and criticality to the organization. Data classification control can help to determine the appropriate level and type of security controls that are required to protect the data from unauthorized access, disclosure, or modification. Data classification control can also help to align the security controls with the organizational risk appetite, which is the amount and type of risk that the organization is willing to accept or tolerate. Data classification control can help to ensure that the security controls are proportional and cost-effective, and that they balance the security needs and the business objectives of the organization.

NEW QUESTION # 679

Which of the following is NOT a technique used to perform a penetration test?

- A. sniffing
- B. scanning and probing
- C. traffic padding
- D. war dialing

Answer: C

Explanation:

Explanation/Reference:

Explanation:

Traffic padding is a countermeasure to traffic analysis.

Even if perfect cryptographic routines are used, the attacker can gain knowledge of the amount of traffic that was generated. The attacker might not know what Alice and Bob were talking about, but can know that they were talking and how much they talked. In certain circumstances this can be very bad. Consider for example when a military is organizing a secret attack against another nation: it may suffice to alert the other nation for them to know merely that there is a lot of secret activity going on.

Padding messages is a way to make it harder to do traffic analysis. Normally, a number of random bits are appended to the end of the message with an indication at the end how much this random data is. The randomness should have a minimum value of 0, a maximum number of N and an even distribution between the two extremes. Note, that increasing 0 does not help, only increasing N helps, though that also means that a lower percentage of the channel will be used to transmit real data. Also note, that since the cryptographic routine is assumed to be uncrackable (otherwise the padding length itself is crackable), it does not help to put the padding anywhere else, e.g. at the beginning, in the middle, or in a sporadic manner.

Incorrect Answers:

B: Scanning and probing is a technique used in Penetration Testing. Various scanners, like a port scanner, can reveal information about a network's infrastructure and enable an intruder to access the network's unsecured ports.

C: War dialing is a technique used in Penetration Testing. War dialing is a technique of using a modem to automatically scan a list of telephone numbers, usually dialing every number in a local area code to search for computers to hack in to.

D: Sniffing (packet sniffing) is a technique used in Penetration Testing. Packet sniffing is the process of intercepting data as it is transmitted over a network.

NEW QUESTION # 680

Which of the following Common Data Network Services is used to send and receive email internally or externally through an email gateway device?

- A. Print services
- B. Mail services
- C. Client/Server services
- D. File services

Answer: B

Explanation:

This functionality is provided through mail services, this service permits collaboration between users in an internal and external level. We usually use two protocols,

"SMTP" in port TCP 25 to send the emails and "POP3" in port TCP 110 to receive them.

Currently there is another protocol that is gaining popularity, it is "IMAP4". Print services are used for printing documents and file services are used to share and access files and folders inside the infrastructure.

NEW QUESTION # 681

.....

For candidates who will buy CISSP exam braindumps online, the safety of the website is quite important. If you choose CISSP exam materials of us, we will ensure your safety. With professional technicians examining the website and exam dumps at times, the shopping environment is quite safe. In addition, we offer you instant download for CISSP Exam Braindumps, and we will send the download link and password to you within ten minutes after payment. And you can start your study immediately.

Exam CISSP Cram: <https://www.freedumps.top/CISSP-real-exam.html>

The contents of CISSP test questions are compiled strictly according to the content of the exam, Our website devote themselves for years to develop the ISC Exam CISSP Cram Exam CISSP Cram - Certified Information Systems Security Professional (CISSP) exam pdf materials to help more people who want to have a better development in IT field to pass Exam CISSP Cram - Certified Information Systems Security Professional (CISSP) real exam, ISC CISSP real exam questions are collected by our professional ISC certified experts, which can guarantee the accuracy of CISSP real exam questions.

We take the leader position in the career of assisting the candidates in passing their CISSP exams and gaining their dreaming certifications, Creating a Basic Web Page with Text.

The contents of CISSP Test Questions are compiled strictly according to the content of the exam, Our website devote themselves for years to develop the ISC Certified Information Systems Security Professional (CISSP) exam pdf materials CISSP to help more people who want to have a better development in IT field to pass Certified Information Systems Security Professional (CISSP) real exam.

Valid CISSP Latest Dumps Free bring you Fantastic Exam CISSP Cram for ISC Certified Information Systems Security Professional (CISSP)

ISC CISSP real exam questions are collected by our professional ISC certified experts, which can guarantee the accuracy of CISSP real exam questions.

Our CISSP practice questions are undetected treasure for you if this is your first time choosing them, The customer will receive updates of Certified Information Systems Security Professional (CISSP) (CISSP) real dumps for up to 365 days after buying the product.
