NEW QUESTION # 87

開発者は、様々なデバイスでレスポンス性な Lightning Web コンポーネントを作成するという課題を抱えています。この目標を達成するために役立つ 2 つのコンポーネントはどれですか。

- A. ライトニングナビゲーション
- B. Lightningレイアウト
- C. Lightningレイアウト項目
- D. Lightning入力場所

Answer: B,C

Explanation:

To build a responsive user interface in Lightning Web Components (LWC), developers rely on the layout system provided by the Lightning Design System (SLDS). This system is primarily implemented through two tightly coupled components: lightning-layout and lightning-layout-item.

lightning-layout acts as a flexible container (a flexbox wrapper). It allows developers to arrange child components in a row or column and manage horizontal and vertical alignment. It provides the overall structure for the grid. lightning-layout-item is the child component that resides within a lightning-layout. It is responsible for defining the actual proportions of the content across different breakpoints (small, medium, and large devices) using attributes like size, small-device-size, medium-device-size, and large-device-size.

Together, these two components allow a developer to specify exactly how much space a piece of content should occupy depending on the user's screen size. For example, a sidebar might occupy 100% of the width on a phone but only 25% on a desktop. lightning-input-location is a specific input field for geolocation data, and lightning-navigation is a service used for page routing; neither is involved in the visual responsiveness or structural layout of the component. Therefore, options B and D are the essential building blocks for responsive design.

NEW QUESTION # 88

ユーザは、カスタム Lightning Web コンポーネント (LWC) のボタンが入力したデータを保存しないと報告しています。ボタンをクリックしたように見えますが、LWC は何もせずにただそこに座っているだけです。

開発者はエラーメッセージが適切に表示されるようにするには何を使用する必要がありますか?

- A. JavaScript と HTML を追加してエラーメッセージを表示します。
- B. DML ステートメントを囲む try-catch ブロックを追加します。
- C. <apex.messages/> タグをコンポーネントに追加します。
- D. allOrNone を false に設定して Database メソッドを使用します。

Answer: A

Explanation:

To ensure error messages are properly displayed in a Lightning web component, the developer should use JavaScript to handle errors in the component's client-side code and use HTML to display the message on the UI. This can be combined with Apex exception handling for server-side operations.

- C. リスト **accountList** の代わりにマップ **accountMap** を使用します。

Answer: A,B

NEW QUESTION # 90

Lightning Web コンポーネントを開発する場合、携帯電話などの小型デバイスでは **lightninglayout-items** を 1 列で表示し、タブレットサイズとデスクトップサイズの画面では 2 列で表示する設定はどれですか?

- A. **size="12" mediaDeviceSize="6"** を設定します。
- B. **size="6" small-device-size="12"** を設定します。
- C. **size="12" タブレットデバイスサイズ="6"** を設定します。
- D. **size="6" mobile-device-size="12"** を設定します。

Answer: A

Explanation:

To display lightning-layout-items in one column on small devices and in two columns on larger devices, you should set the size attribute to "12" for small devices and the medium-device-size attribute to "6". This ensures that on small devices each item takes the full width, and on medium or larger devices, items take up half the width.
