

Free Confluent Certified Developer for Apache Kafka Certification Examination vce dumps & latest CCDAK examcollection dumps

What's more, part of that Getcertkey CCDAK dumps now are free: <https://drive.google.com/open?id=1aEsUdZ6DQwcONTVmCE1E7GubjfjX3dXI>

We offer you free demo for CCDAK pdf dumps. You can check out the questions quality and usability of our training material before you buy. Confluent CCDAK questions are written to the highest standards of technical accuracy with accurate answers. If you prepare for your exams using Getcertkey CCDAK practice torrent, it is easy to succeed for your certification in the first attempt. Besides, we offer the money refund policy, in case of failure, you can ask for full refund.

Confluent Certified Developer for Apache Kafka (CCDAK) Certification Examination is designed for developers who want to demonstrate their proficiency in Apache Kafka. Confluent Certified Developer for Apache Kafka Certification Examination certification exam is offered by Confluent, the creators of Apache Kafka, and is designed to test the knowledge and skills necessary to build mission-critical Kafka applications. CCDAK Exam covers a range of topics, including Kafka architecture, configuration, development, and operations.

CCDAK Exam Tutorial & New CCDAK Brindumps Free

Someone always asks: Why do we need so many certifications? One thing has to admit, more and more certifications you own, it may bring you more opportunities to obtain better job, earn more salary. This is the reason that we need to recognize the importance of getting the test CCDAK certifications. More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition. Therefore, the CCDAK Guide Torrent can help users pass the qualifying examinations that they are required to participate in faster and more efficiently.

Confluent CCDAK (Confluent Certified Developer for Apache Kafka Certification Examination) Certification Exam is a globally recognized certification exam that tests the candidate's knowledge and proficiency in Apache Kafka development using Confluent platform. Confluent Certified Developer for Apache Kafka Certification Examination certification exam is designed to certify the

developers who have a thorough understanding of Apache Kafka basics, Confluent platform, and building real-world applications using Kafka.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q196-Q201):

NEW QUESTION # 196

You are building a system for a retail store selling products to customers.

Which three datasets should you model as a GlobalKTable?

(Select three.)

- A. All purchases at a retail store occurring in real time
- **B. Inventory of products at a warehouse**
- **C. Customer profile information**
- D. Log of payment transactions
- **E. Catalog of products**

Answer: B,C,E

Explanation:

A GlobalKTable is a replicated, read-only table available in full on all instances. It's best for reference or lookup datasets such as:

- * Product catalog
- * Customer profiles
- * Warehouse inventory

From Kafka Streams Developer Guide:

"Use GlobalKTable when you need to perform joins using non-partition-aligned reference data that's small enough to replicate."

* Purchases and transactions are high-throughput, time-sensitive streams, not static reference data.

Reference: Kafka Streams Concepts > GlobalKTable

NEW QUESTION # 197

You want to perform table lookups against a KTable everytime a new record is received from the KStream. What is the output of KStream-KTable join?

- **A. Kstream**
- B. You choose between KStream or KTable
- C. GlobalKTable
- D. KTable

Answer: A

Explanation:

Here KStream is being processed to create another KStream.

NEW QUESTION # 198

Your producer is producing at a very high rate and the batches are completely full each time. How can you improve the producer throughput? (select two)

- A. Decrease linger.ms
- **B. Enable compression**
- **C. Increase batch.size**
- D. Decrease batch.size
- E. Disable compression
- F. Increase linger.ms

Answer: B,C

Explanation:

batch.size controls how many bytes of data to collect before sending messages to the Kafka broker. Set this as high as possible, without exceeding available memory. Enabling compression can also help make more compact batches and increase the throughput

of your producer. Linger.ms will have no effect as the batches are already full

NEW QUESTION # 199

A producer just sent a message to the leader broker for a topic partition. The producer used acks=1 and therefore the data has not yet been replicated to followers. Under which conditions will the consumer see the message?

- **A. When the high watermark has advanced**
- B. When the message has been fully replicated to all replicas
- C. Never, the produce request will fail
- D. Right away

Answer: A

Explanation:

The high watermark is an advanced Kafka concept, and is advanced once all the ISR replicates the latest offsets. A consumer can only read up to the value of the High Watermark (which can be less than the highest offset, in the case of acks=1)

NEW QUESTION # 200

If I supply the setting compression.type=snappy to my producer, what will happen? (select two)

- A. The Kafka brokers have to compress the data
- B. The Producers have to compress the data
- C. The Consumers have to compress the data
- **D. The Consumers have to de-compress the data**
- E. The Kafka brokers have to de-compress the data

Answer: D

Explanation:

Kafka transfers data with zero copy and no transformation. Any transformation (including compression) is the responsibility of clients.

NEW QUESTION # 201
