

Quiz 2026 Salesforce Analytics-Admn-201: Salesforce Certified Tableau Server Administrator Accurate Study Test

What's more, part of that CertkingdomPDF Analytics-Admn-201 dumps now are free: <https://drive.google.com/open?id=1BnXsoGEeu7oYxSbzSSZIYVvwO2EcSOSw>

There are some loopholes or systemic problems in the use of a product, which is why a lot of online products are maintained for a very late period. The Analytics-Admn-201 study materials are not exceptional also, in order to let the users to achieve the best product experience, if there is some learning platform system vulnerabilities or bugs, we will check the operation of the Analytics-Admn-201 study materials in the first time, let the professional service personnel to help user to solve any problems. The Analytics-Admn-201 Study Materials have many professionals, and they monitor the use of the user environment and the safety of the learning platform timely, for there are some problems with those still in the incubation period of strict control, thus to maintain the Analytics-Admn-201 study materials timely, let the user comfortable working in a better environment. Believe it or not, we face the more intense society, and we should prompt our competitiveness to make our dreams come true.

We are aware that the IT industry is a new industry. It is one of the chain to drive economic development. So its status can not be ignored. IT certification is one of the means of competition in the IT industry. Passed the certification exam you will get to a good rise. But pass the exam is not easy. It is recommended that using training tool to prepare for the exam. If you want to choose this certification training resources, CertkingdomPDF's Salesforce Analytics-Admn-201 Exam Training materials will be the best choice. The success rate is 100%, and can ensure you pass the exam.

Salesforce Analytics-Admn-201 Detail Explanation - New Analytics-Admn-201 Test Cost

Once downloaded from the website, you can easily study from the Salesforce Certified Tableau Server Administrator exam questions compiled by our highly experienced professionals as directed by the Salesforce Analytics-Admn-201 exam syllabus. The Salesforce Analytics-Admn-201 Dumps are given regular update checks in case of any update. We make sure that candidates are not preparing for the Salesforce Certified Tableau Server Administrator exam from outdated and unreliable Analytics-Admn-201 study material.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 2	<ul style="list-style-type: none"> • Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 3	<ul style="list-style-type: none"> • Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 4	<ul style="list-style-type: none"> • Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.
Topic 5	<ul style="list-style-type: none"> • Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.

Salesforce Certified Tableau Server Administrator Sample Questions (Q43-Q48):

NEW QUESTION # 43

You need to verify the status of the Coordination Service ensemble in a high-availability (HA) Tableau Server cluster. What should you do?

- A. Run the command `tsm status -v`
- B. Run the command `tsm maintenance ziplogs`
- C. Examine the Tableau Services Manager (TSM) web client Status page
- D. Examine the Tableau Server Status page

Answer: A

Explanation:

In an HA Tableau Server cluster, the Coordination Service (ZooKeeper ensemble) maintains cluster state- let's find the best way to check it:

* Coordination Service:

* Runs on multiple nodes (3 or 5 in HA) to ensure quorum and failover.

* Status indicates if it's running and synced-critical for cluster health.

* Option C (Run `tsm status -v`): Correct.

* Details: `tsm status --verbose` lists all processes across nodes, including Coordination Service (e.g., "Coordination Service: RUNNING").

* Why Best: Provides detailed, node-specific status in the CLI-e.g., "Node 1: RUNNING, Node

2: RUNNING."

* Use: Run on the initial node; -v ensures full output.

* Option A (TSM web client Status page): Incorrect.

* Why: The TSM UI (Server > Status) shows process counts (e.g., "Coordination Service: 3 instances"), but not detailed per-node status-less granular than CLI.

* Option B (tsm maintenance ziplogs): Incorrect.

* Why: Generates log archives for troubleshooting, not a real-time status check.

* Option D (Tableau Server Status page): Incorrect.

* Why: The Server Status page (Server > Status in the web UI) monitors application processes (e.g., VizQL), not TSM's Coordination Service.

Why This Matters: Coordination Service health ensures HA stability-tsm status -v is the admin's go-to for precision.

Reference: Tableau Server Documentation - "Check Server Status" (https://help.tableau.com/current/server/en-us/tsm_status.htm).

NEW QUESTION # 44

If a user already exists as part of a group in Tableau Server, and Active Directory synchronization then applies a minimum site role to the group, what will happen to the existing user's site role?

- A. It will change to the minimum site role only if the minimum site role reduces access
- B. It will change to the minimum site role only if the minimum site role provides more access
- C. It will never change as a result of synchronization
- D. It will always change to the minimum site role

Answer: A

Explanation:

When Tableau Server uses Active Directory (AD) for authentication, group synchronization imports AD groups and assigns a minimum site role (e.g., Viewer, Explorer) to users in that group. This ensures users meet a baseline access level. The behavior for existing users during sync is:

* If the user's current site role provides more access than the minimum (e.g., Explorer vs. Viewer), their role remains unchanged.

* If the user's current role provides less access than the minimum (e.g., Unlicensed vs. Viewer), their role is upgraded to the minimum.

This preserves higher privileges while enforcing a floor. "Reduces access" means the minimum role is lower than the current role (e.g., Viewer vs. Explorer), in which case the existing role stays.

* Option A (It will change to the minimum site role only if the minimum site role reduces access):

Correct. The user's role changes only if the minimum increases access (e.g., Unlicensed to Viewer); otherwise, it stays higher.

* Option B (It will change only if the minimum provides more access): Incorrect wording. This is the inverse of the actual behavior-change occurs when needed to meet the minimum, not to exceed it.

* Option C (It will always change): Incorrect. Existing higher roles are preserved.

* Option D (It will never change): Incorrect. It changes if the current role is below the minimum.

Reference: Tableau Server Documentation - "Synchronize Active Directory Groups" (https://help.tableau.com/current/server/en-us/groups_sync.htm).

NEW QUESTION # 45

What are two intervals when Tableau Server verifies if data conditions for data-driven alerts are true? (Choose two.)

- A. Every 10 minutes
- B. Whenever a new extract is published
- C. Whenever extracts in the related workbook are refreshed
- D. Every 60 minutes

Answer: C,D

Explanation:

Data-driven alerts notify users when data meets conditions (e.g., sales > \$10K). Let's examine when Tableau checks these:

* Alert Mechanics:

* Enabled per site (Settings > General > Data-Driven Alerts).

* Backgrounder evaluates conditions against extract data.

* Check Intervals: Configurable via tsm configuration set -k dataAlerts.checkIntervalInMinutes (default: 60 minutes).

* Refresh Trigger: Also checks post-extract refresh for immediate updates.

- * Option A (Every 60 minutes): Correct.
 - * Details: Default interval-Backgrounder polls every hour to evaluate alert conditions.
 - * Config: Adjustable (e.g., -v 30 for 30 minutes).
 - * Option D (Whenever extracts in the related workbook are refreshed): Correct.
 - * Details: An extract refresh updates the data, triggering an immediate alert check to catch changes promptly.
 - * Why: Ensures timely notifications without waiting for the next poll.
 - * Option B (Every 10 minutes): Incorrect.
 - * Why: Not the default-possible via config, but not standard.
 - * Option C (Whenever a new extract is published): Incorrect.
 - * Why: Publishing creates the extract; alerts trigger on refreshes or polling, not initial publication.
- Why This Matters: Timing affects alert responsiveness-balancing frequency and server load is key.
Reference: Tableau Server Documentation - "Data-Driven Alerts" (https://help.tableau.com/current/server/en-us/data_alerts.htm).

NEW QUESTION # 46

What command should you run to update the automatically-generated secrets that are created during a Tableau Server installation?

- A. tsm licenses refresh
- B. tsm data-access caching set -r 1
- C. tsm security validate-asset-keys
- **D. tsm security regenerate-internal-tokens**

Answer: D

Explanation:

Tableau Server uses internal secrets (tokens) for secure communication between its processes (e.g., Repository, File Store). These are automatically generated during installation and can be regenerated if compromised or for security maintenance. The command to update these is:

* tsm security regenerate-internal-tokens: This regenerates the internal security tokens, ensuring all processes use the new tokens after a restart.

* Option C (tsm security regenerate-internal-tokens): Correct. This is the documented command for updating internal secrets.

* Option A (tsm data-access caching set -r 1): Incorrect. This command configures caching behavior, not security tokens.

* Option B (tsm licenses refresh): Incorrect. This refreshes license data, unrelated to internal secrets.

* Option D (tsm security validate-asset-keys): Incorrect. This validates encryption keys for assets, not internal tokens.

Reference: Tableau Server Documentation - "Regenerate Internal Tokens" (https://help.tableau.com/current/server/en-us/cli_security.htm#regenerate-internal-tokens).

NEW QUESTION # 47

Which three items can be contained in a project? (Choose three.)

- A. Groups
- **B. Workbooks**
- **C. Nested Projects**
- **D. Data Sources**

Answer: B,C,D

Explanation:

In Tableau Server, projects are containers for organizing and securing content. They help manage permissions and structure content hierarchically. Let's define what can be contained:

* Workbooks: Visualizations and dashboards published to the Server.

* Data Sources: Published connections or extracts reusable across workbooks.

* Nested Projects: Sub-projects within a parent project, introduced in later versions (e.g., 2018.2) for deeper organization.

* Option B (Workbooks): Correct. Workbooks are the primary content type in projects, containing views and dashboards.

* Option C (Nested Projects): Correct. Nested projects allow hierarchical structuring (e.g., a "Sales" project with "Q1" and "Q2" sub-projects), with inherited or custom permissions.

* Option D (Data Sources): Correct. Published data sources reside in projects, providing reusable data connections.

* Option A (Groups): Incorrect. Groups are collections of users managed at the site or server level, not stored within projects.

Projects contain content, not user entities.

Why This Matters: Projects are key to content governance-knowing what they hold helps administrators organize and secure assets

effectively.

Reference: Tableau Server Documentation - "Projects" (<https://help.tableau.com/current/server/en-us/projects.htm>).

NEW QUESTION # 48
