C-BCBTP-2502試験の準備方法 | 効果的なC-BCBTP-2502基礎訓練試験 | 最新のSAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite受験対策解説集

SAP C-BCBTP-2502認定資格試験が難しいので、弊社のC-BCBTP-2502問題集はあなたに相当する認定資格試験問題集を見つけるし、本当の試験問題の難しさを克服することができます。弊社はSAP C-BCBTP-2502認定試験の最新要求に従って関心を持って、全面的かつ高品質な模擬試験問題集を提供します。また、購入する前に、無料でC-BCBTP-2502のPDF版デモをダウンロードでき、信頼性を確認することができます。

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite 認定 C-BCBTP-2502 試験問題 (Q13-Q18):

質問 # 13

How does SAP Business AI enhance SAP BTP's capabilities?

- A. By replacing all existing business processes with AI-only solutions.
- B. By restricting AI usage to SAP ERP modules.
- C. By eliminating machine learning capabilities.
- **D. By enabling AI-driven automation and decision-making.**

正解: D

解説:

SAP Business AI is the strategic layer that infuses intelligence directly into the business applications running on SAP BTP. It enhances the platform's capabilities by enabling AI-driven automation and intelligent decision-making across the entire enterprise value chain. Unlike generic AI, SAP Business AI is trained on industry-specific data and business semantics, ensuring that the insights it provides are relevant to specific corporate functions like finance, supply chain, and HR.

By leveraging services within BTP-such as SAP AI Core and SAP AI Launchpad-Business AI allows organizations to move from manual, reactive processes to proactive, automated ones. For example, it can automate the matching of incoming payments to invoices or predict potential supply chain disruptions before they occur. This positioning is critical for the SAP Business Suite because it doesn't just add a "feature"; it transforms the fundamental nature of the software from a "system of record" to a "system of intelligence." This allows human workers to focus on higher-value strategic tasks while the AI handles high-volume, repetitive data processing and provides data-backed recommendations, thereby significantly increasing organizational agility and competitive advantage.

質問 # 14

Which SAP BTP service supports real-time financial data analysis for banking and finance industries?

- A. SAP Business Network
- B. SAP Conversational AI
- C. SAP HANA Cloud
- D. SAP Fieldglass

正解: C

解説:

For the banking and finance industries, the ability to process and analyze data in real-time is not just an advantage-it is a regulatory and operational necessity. SAP HANA Cloud is the foundational BTP service that supports this requirement. Due to its advanced in-memory computing architecture, HANA Cloud allows financial institutions to perform complex risk assessments, liquidity monitoring, and fraud detection on live transactional data.

In the context of the SAP Business Suite for Finance, HANA Cloud eliminates the latency associated with traditional data warehousing. Financial analysts can run "what-if" simulations and "instant closes" directly on the production data set. This real-time capability is essential for managing market volatility and meeting stringent reporting deadlines. Furthermore, HANA Cloud's multi-model processing allows it to handle not just standard relational data, but also spatial and graph data, which are increasingly used in modern financial services for relationship mapping and anti-money laundering (AML) initiatives. By positioning HANA Cloud as the central data engine, SAP BTP provides the high-performance infrastructure needed to power the next generation of digital banking services.

質問 # 15

How does SAP HANA Cloud improve business data processing?

- A. Eliminates cloud computing in favor of on-premise storage.
- B. Restricts data access to SAP applications only.
- C. Requires batch processing for data retrieval.
- D. Enables in-memory computing for real-time analytics.

正解: D

解説:

The primary innovation of SAP HANA Cloud is its in-memory computing engine, which stores data in RAM rather than on traditional spinning disks. This architecture allows for the processing of vast amounts of data at speeds that are orders of magnitude faster than legacy databases. For the SAP Business Suite, this means that the boundary between "doing the work" (transactions) and "analyzing the work" (analytics) disappears. Users can run complex, multi-dimensional analytical queries on live, "hot" data without the need for time-consuming data extracts or batch processing.

By enabling real-time analytics, SAP HANA Cloud empowers business leaders to make decisions based on what is happening now, rather than what happened last week. It also introduces "data tiering" which allows organizations to manage costs by keeping frequently accessed data in-memory while moving less critical data to cheaper "warm" or "cold" storage (Data Lake), all while keeping it accessible through a single interface.

This flexibility is essential for modern enterprises that deal with "Big Data" but require the agility of the cloud. Positioning HANA Cloud as the data foundation of BTP ensures that every application built on the platform is inherently fast, scalable, and capable of delivering instant insights.

質問 # 16

What is a key feature of SAP BTP's AI capabilities?

- A. Limited AI functionalities restricted to specific SAP modules.
- B. Rule-based decision-making without machine learning.
- **C. Automated decision-making with machine learning models.**
- D. AI processing without cloud-based analytics support.

正解: C

解説:

SAP BTP's approach to Artificial Intelligence is centered on the concept of "Business AI," which means AI is built specifically for business contexts and is deeply embedded within the SAP applications users use every day. A key feature of this capability is automated decision-making with machine learning (ML) models.

Unlike traditional rule-based systems that follow rigid "if-then" logic, ML models within BTP can analyze vast amounts of historical data to identify patterns and predict future outcomes. This allows the platform to provide recommendations, such as identifying the best supplier based on past performance or flagging potentially fraudulent financial transactions.

The AI Foundation on SAP BTP provides developers with ready-to-use services and tools to build, run, and manage AI-led extensions. This includes access to Large Language Models (LLMs) and specialized machine learning services that are pre-trained on business data. By positioning AI as a core component of BTP, SAP ensures that intelligence is not an afterthought but a central part of the business process. This enables a shift from reactive data entry to proactive, data-driven management. Furthermore, these AI capabilities are tightly integrated with SAP Analytics Cloud, ensuring that the insights generated by machine learning models are immediately actionable through intuitive visualizations and dashboards, thereby driving the digital transformation of the SAP Business Suite.

質問 # 17

Which market trend is driving the adoption of SAP BTP?

- A. Reduced emphasis on business automation.
- B. Decreasing focus on API-based integrations.
- **C. Increased need for data-driven decision-making.**
- D. Declining use of cloud-based solutions.

正解: C

解説:

One of the most powerful market trends driving the global adoption of SAP BTP is the increased need for data-driven decision-making. In today's hyper-competitive landscape, "gut feeling" is no longer a viable strategy for business leaders. Organizations are sitting on mountains of data, but the challenge lies in extracting actionable insights from it. SAP BTP addresses this trend by providing a unified environment where data management, analytics, and AI converge. This allows businesses to transform raw data into a strategic asset, enabling more accurate forecasting, optimized operations, and enhanced customer experiences.

This trend is further accelerated by the "Digital Transformation" movement, where companies are moving away from monolithic, isolated systems toward agile, interconnected platforms. Businesses now demand real-time visibility across their entire value chain—from procurement to sales. SAP BTP's ability to integrate disparate systems and provide a "single source of truth" through SAP HANA Cloud and SAP Analytics Cloud directly addresses this market demand. As companies strive to become "Intelligent Enterprises," they rely on BTP to provide the technical infrastructure that supports continuous innovation, rapid automation, and the ability to pivot their business models based on data-driven evidence rather than historical assumptions.
