## Updated Question AD0-E117 Explanations Spend Your Little Time and Energy to Clear Adobe AD0-E117: Adobe Experience Manager Architect Master exam

With the aim of helping aspirants to achieve the Adobe Experience Manager Architect Master (AD0-E117) certification, ValidVCE is committed to providing the best quality and updated Adobe AD0-E117 exam dumps. With their authentic and Real AD0-E117 Exam Questions, you can be confident of passing the Adobe AD0-E117 certification exam on the first try.

Adobe AD0-E117 Certification Exam is a rigorous exam that tests your knowledge and skills in AEM architecture. AD0-E117 exam consists of 60 multiple-choice questions that you need to complete in 120 minutes. To pass the exam, you need to score at least 70%. If you fail the exam, you can retake it after 14 days.

## Adobe Experience Manager Architect Master Sample Questions (Q22-Q27):

### NEW QUESTION # 22

A customer wants to implement an AEM solution to serve localized content to several regional websites. Which AEM capability should the Architect recommend?

- A. Use translation connector and i18N API
- B. Use translation connector and translation workflows
- C. Use i18N API and Multi Site Manager

- D. Use translation connector and Multi Site Manager

**Answer: D**

Explanation:

According to Adobe Experience Manager documentation, translation connectors are used to integrate AEM with third-party translation services to orchestrate the translation of AEM content. Multi Site Manager (MSM) is used to create and manage multiple websites that share common content and structure.

<https://experienceleague.adobe.com/docs/experience-manager-cloud-service/content/sites/administering/reusing-content/translation/sites/configure-connector.html#3Flang%3Den>

**NEW QUESTION # 23**

A website built on AEM Sites displays the company's stock price in the footer of all pages. The stock data is retrieved from a third party REST service using two-way SSL and rendered in an AEM component using HTML. During performance testing in the last development sprint it becomes apparent that the third party service sometimes takes up to 30 seconds to respond, which degrades the overall site performance.

How should an Architect address this issue?

- A. Call the REST service directly from the browser
- B. Add a 5 second timeout to the REST call
- **C. Load the stock data component asynchronously**
- D. Temporarily remove the component from all content

**Answer: C**

Explanation:

"loading the stock data component asynchronously can improve the site performance by not blocking the page rendering while waiting for the REST service response".

**NEW QUESTION # 24**

A new AEM Sites implementation includes a component that lists the 10 most recently published PDF documents in AEM Assets. The component works as expected during development and passes QA testing. The business starts to use it while entering content and uploading assets in preparation for go-live. A few days later, the component's PDF list is empty.

What is the most likely cause of the issue?

- **A. The component is missing a matching Oak index.**
- B. A PDF with incorrect MIME type has been uploaded.
- C. The component is missing the HTML display context to escape the PDF title.
- D. A PDF with too large file size has been uploaded.

**Answer: A**

Explanation:

"the component is missing a matching Oak index that can efficiently query the PDF documents by their last modified date".

**NEW QUESTION # 25**

A large AEM enterprise site is implementing authentication and requires a true optimal load balancing across the site's multi AEM publish instances. Which approach should an Architect take to meet this requirement?

- **A. Enable Round Robin processing in Dispatcher configuration**
- B. Configure Sticky Connections
- C. Configure the Dispatcher to run with a Dedicated System User
- D. Enable Encapsulated Token Option

**Answer: A**

## NEW QUESTION # 26

An AEM Architect is moving existing content from an on-premise AEM to an AEM Cloud Service instance using the Content Transfer Tool. As part of the initial source preparation, the Architect is going to run the offline compaction on the on-premise AEM. What other two actions should the Architect do to the on-premise AEM before proceeding with the extraction phase? (Choose two.)

- A. Verify that free disk space is at least 1.5x the JCR size
- B. Verify that wipe mode is enabled
- C. Run datastore consistency check via oak-run
- D. Stop all bundles using the AEM Web Console
- E. Validate that all replication agents are disabled

**Answer: C,E**

### Explanation:

According to Adobe Experience Manager documentation<sup>1</sup>, before using the Content Transfer Tool, it is recommended to disable all replication agents on the source AEM instance to prevent any content changes during the migration process. It is also recommended to run a datastore consistency check via oak-run tool<sup>2</sup> to ensure that there are no missing or corrupted binaries in the source AEM instance.
