### New C-CPI-2506 Exam Discount | C-CPI-2506 Exam Cost

In order to better meet users' need, our C-CPI-2506 study questions have set up a complete set of service system, so that users can enjoy our professional one-stop service. We not only in the pre-sale for users provide free demo, when buy the user can choose in we provide in the three versions, at the same time, our C-CPI-2506 Training Materials also provides 24-hour after-sales service. Such a perfect one-stop service of our C-CPI-2506 test guide, believe you will not regret your choice, and can better use your time, full study, efficient pass the C-CPI-2506 exam.

### SAP Certified Associate - Integration Developer Sample Questions (Q49-Q54):

#### NEW QUESTION # 49

You are using a Data store Operation of the type Write. Which parameter must you select to avoid duplicate entries?

- A. Encrypted stored Message
- B. Include Message Headers
- C. Retention Threshold for Alerting
- D. Overwrite Existing Message

**Answer: D**

Explanation:

To avoid duplicate entries when using a Data Store Operation of the type Write, you must select the Overwrite Existing Message parameter. The Overwrite Existing Message parameter allows you to overwrite an existing data store entry with the same key if it already exists. If you do not select this parameter, the Write operation will fail if there is a duplicate key in the data store. Reference: Modernize Integration with SAP Integration Suite | openSAP

#### NEW QUESTION # 50

What are target endpoints of an API? Note: There are 3 correct answers to this question.

- A. URL of original API
- B. Resources
- C. API provider
- D. API proxy
- E. API consumer

**Answer: A,C,D**

Explanation:

The target endpoints of an API are the API provider, the API proxy, and the URL of the original API. The API provider is the system or application that exposes the interface and functionality of the API. The API proxy is the intermediary component that mediates the requests and responses between the API consumer and the API provider. The URL of the original API is the address that identifies the location and resource of the API. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

#### NEW QUESTION # 51

You want to use an HTTPS endpoint from an integration flow. In which of the following must you use the HTTP client?

- A. SAP Integration Suite, advanced event mesh
- **B. Open Connectors capability within SAP Integration Suite**
- C. SAP Business Application Studio
- D. API Management capability within SAP Integration Suite

**Answer: B**

Explanation:

To use an HTTPS endpoint from an integration flow, you can use the Open Connectors capability within SAP Integration Suite. Open Connectors is a feature that allows you to connect to over 160 third-party applications using standardized and normalized APIs. You can use the HTTP client connector to make HTTP or HTTPS requests to any endpoint that supports these protocols. You can configure the HTTP client connector with various parameters, such as URL, method, headers, query parameters, body, and authentication. Reference: Open Connectors | SAP Help Portal, HTTP Client Connector | SAP Help Portal

#### NEW QUESTION # 52

You use an APIKey for authentication in an HTTPS API call. In which part of the Content Modifier is the APIKey included?

- A. Attachment
- B. Message body
- C. Exchange property
- **D. Message header**

**Answer: D**

Explanation:

When using API Key authentication for HTTP(S) calls in SAP Integration Suite:

The API Key is typically included in the HTTP header (e.g., APIKey: <value> or x-api-key: <value>).

Message headers are configured in the Content Modifier for outbound requests.

Other options:

Attachment # Used for file handling, not authentication.

Message body # Contains payload, not credentials.

Exchange property # Used internally within the flow, not sent externally.

Thus, the API Key must be placed in the Message header.

#### NEW QUESTION # 53

What do you use in an integration flow to handle unexpected errors?

- **A. Exception-handling subprocesses**
- B. Exception handler integration flow elements
- C. Status code checks
- D. Try-catch subprocesses

**Answer: A**

Explanation:

In SAP Cloud Integration (part of Integration Suite), error handling within integration flows is implemented using:

Exception Subprocesses # Dedicated subprocesses triggered by an Error Start Event to handle unexpected runtime exceptions.

These allow logging, error notifications, or compensating logic.

Other options:

Try-Catch subprocesses # Not a modeling construct in SAP CPI.

Exception handler integration flow elements # Not a standard artifact; error handling is done with exception subprocesses.

Status code checks # Useful for response validation but not full error handling.

Thus, the correct answer is Exception-handling subprocesses.

#### NEW QUESTION # 54

.....

Our aim is to provide customers with actual SAP C-CPI-2506 questions so they pass their SAP Certified Associate - Integration

Developer (C-CPI-2506) exams with confidence. We offer a free demos and up to 365 days of free SAP Dumps updates. One of the key elements of our approach is following the current exam content. Our C-CPI-2506 product is designed by experienced industry professionals and is regularly updated to reflect the latest changes in the C-CPI-2506 test content.
