To achieve the requirement of letting users navigate between different published dashboards directly from their current dashboard, you need to enable the "Show sheets as tabs" option. This setting allows each sheet in your workbook, including dashboards, to be displayed as a tab, making it easy for users to switch between different views or dashboards within the same published workbook. Here is the option you should configure:

* Check the Show sheets as tabs checkbox in the 'More Options' section.

This action will ensure that all sheets, when published to the Tableau Server, appear as tabs, facilitating user navigation across multiple dashboards included in the workbook.

NEW QUESTION # 49

A Data Analyst has the following chart that shows the cumulative volume of sales from various dates.

The analyst wants the months to appear as shown in the following chart.

What should the analyst do?

- A. Change the Sort Order
- B. Convert the date to Exact Date
- C. Convert the date to Attribute
- **D. Convert the date to Continuous**

Answer: D

NEW QUESTION # 50

A Data Analyst has a data source that has two tables named Table1 and Table2. Table1 is the primary table and Table2 is the secondary table.

The analyst wants to combine the tables by using Tableau Prep. The combined table must include only values from Table1 that do not match any values in Table2. The field values from Table2 must appear as null values.

Which type of join should the analyst use?

- A. Full outer
- **B. Left only**
- C. Inner
- D. Union
- E. Left

Answer: B

NEW QUESTION # 51

You have a data source that contains data for every city in the United States. The following is a sample of the data.

City	State	Country	Population
Miami	Florida	United States	454,279
New York	New York	United States	8,419,000
Seattle	Washington	United States	724,305
Chicago	Illinois	United States	2,710,000

You need to use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million. Which type of filter should you use?

- A. General filter
- B. Top filter
- **C. Condition filter**
- D. Wildcard filter

Answer: C

Explanation:

To use the City dimension to create a dynamic filter that shows the cities that have a population greater than one million, you should use a condition filter. A condition filter is a type of filter that shows only the values that meet a specified condition based on a

measure or a calculation. You can create a condition filter by dragging a dimension to the Filters shelf and selecting Condition from the dialog box. Then you can enter a formula or choose an option that defines your condition.

In this case, you want to create a condition filter based on Population, which is a measure. You can drag City to the Filters shelf and select Condition from the dialog box. Then you can choose By field from the tab and select Population > Sum > Greater than > 1000000 from the drop-down lists. This will create a condition filter that shows only the cities that have a sum of population greater than one million.

The other options are not correct for this scenario. A general filter is not a specific type of filter, but a term that refers to any type of filter in Tableau. A wildcard filter is a type of filter that shows only the values that match a specified pattern or string, such as "New*" or "*ton". A top filter is a type of filter that shows only the top or bottom N values of a measure or dimension based on a ranking or an aggregation. References:

NEW QUESTION # 52

You have the following:

Category	Sub-Category	Sales	Overall Rank	Rank
Furniture	Bookcases	114,880	7	3
	Chairs	328,448	2	1
	Furnishings	833,342	8	4
	Tables	206,966	3	2
Technology	Accessories	167,380	5	3
	Copiers	149,528	6	4
	Machines	189,239	4	2
	Phones	330,007	1	1

Overall Rank and Rank are calculated fields that use the RANK function.

You filter out the sub-category where [Overall Rank] - 1.

For which three the sub-categories will the value of Rank change? Choose three.

- A. Accessories
- B. Chairs
- C. Tables
- D. Bookcases
- E. Copiers
- F. Furnishings
- G. Machines
- H. Phones

Answer: A,C,G

Explanation:

In Tableau, the RANK function assigns a rank to each row within a partition of the data, based on the value of the field being ranked. It is important to understand that the rank is recalculated whenever the underlying data or the partitioning changes.

In the given scenario, the Overall Rank is based on the Sales figures, while the Rank (presumably) is based on the Sales within the Category. When filtering on the condition where [Overall Rank] - 1, it means we are excluding the sub-category that has an Overall Rank of 2.

Looking at the data:

* Furnishings has an Overall Rank of 8, which does not meet the filter condition ([Overall Rank] - 1).

Therefore, its rank remains the same.

* Tables have an Overall Rank of 3. When the sub-category with an Overall Rank of 2 is removed (Chairs in this case), Tables move up in the overall ranking. However, since Tables are the top-ranked within the Furniture category, their Rank within the category would remain unchanged at 1.

* Chairs have an Overall Rank of 2, which meets the filter condition and thus will be removed from the view. We cannot determine the change in Rank for Chairs because they are filtered out.

* Accessories have an Overall Rank of 5. If any sub-category with a higher Overall Rank (1 to 4) is removed, the rank of Accessories within the Technology category could change because it is currently ranked 3 in its category. With the removal of Phones (Overall Rank 1), the Rank of Accessories could potentially increase.

* Copiers have an Overall Rank of 6, which does not meet the filter condition. Therefore, its rank remains the same.

* Machines have an Overall Rank of 4. If we remove Phones (Overall Rank 1), Machines will move up in the overall ranking and potentially within the Technology category as well, changing its Rank from 2 to 1.

* Phones have an Overall Rank of 1, which does not meet the filter condition of being Overall Rank 2.

Therefore, its rank remains the same.

* Bookcases have an Overall Rank of 7, which does not meet the filter condition. Therefore, its rank remains the same. Based on this analysis, when the sub-category with an Overall Rank of 2 (Chairs) is removed, the Rank value will change for Tables, Accessories, and Machines, as they will move up in the overall ranking within their respective categories. However, it's important to note that while Tables will move up in the overall ranking, their rank within the Furniture category would not change as they are already at the top. The rank changes for Accessories and Machines are due to the removal of Phones, which is ranked higher overall and within the Technology category.

NEW QUESTION # 53

.....

All Analytics-DA-201 online tests begin somewhere, and that is what the Analytics-DA-201 training course will do for you: create a foundation to build on. Study guides are essentially a detailed Analytics-DA-201 tutorial and are great introductions to new Analytics-DA-201 training courses as you advance. The content is always relevant, and compound again to make you pass your Analytics-DA-201 Exams on the first attempt. You will frequently find these Analytics-DA-201 PDF files downloadable and can then archive or print them for extra reading or studying on-the-go.
