## Quiz The Best SAP - New C-S4PM-2504 Test Sample

The proximity of perfection on our C-S4PM-2504 practice dumps is outstanding. By using our C-S4PM-2504 preparation materials, we are sure you will pass your exam smoothly and get your dreamed certification. We have a variety of versions for your reference: PDF & Software & APP version. All those versions are high efficient and accurate with passing rate up to 98 to 100

percent. So our C-S4PM-2504 Study Guide is efficient, high-quality for you.

## SAP C-S4PM-2504 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• SAP Activate Methodology: This section of the exam measures skills of Business Process Architects and covers the structure and practical application of SAP Activate. It includes understanding the phases of the methodology: Discover, Prepare, Explore, Realize, Deploy, and Run, and the use of supporting tools such as SAP Roadmap Viewer and SAP Best Practices. Candidates are expected to demonstrate the ability to apply this methodology to streamline cloud implementation processes and ensure agile delivery.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Project Management</li><li>• Organizational Change Management (OCM): This section of the exam measures the skills of Project Managers and covers the key principles of managing SAP cloud implementation projects, including team coordination, stakeholder communication, and change management. It evaluates the ability to lead project activities, manage expectations, and handle resistance during digital transformation. Emphasis is placed on aligning organizational goals with implementation strategies to ensure effective user adoption and project success.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• SAP S</li><li>• 4HANA Cloud Public Edition Implementation: This section of the exam measures the skills of Implementation Consultants and covers the foundational aspects of deploying SAP S</li><li>• 4HANA Cloud Public Edition in a business environment. It focuses on understanding system architecture, scope definition, and the technical and functional setup required for a successful implementation. The candidate is expected to have a strong grasp of how to execute the necessary configuration and adoption tasks that align with customer-specific requirements.</li></ul>

## SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Sample Questions (Q34-Q39):

### NEW QUESTION # 34

You have created a project-specific deliverable that is not part of the SAP Activate roadmap in SAP Cloud ALM. What must you create to manage all tasks that are related to that deliverable?

Note: There are 2 correct answers to this question.

- A. A custom task
- B. A custom team
- C. A custom deliverable
- D. A custom release

Answer: A,C

### NEW QUESTION # 35

Which of the following are SAP Activate workstreams? Note: There are 2 correct answers to this question.

- A. Extensibility
- B. Change Management
- C. Project Management
- D. Data Migration

Answer: C,D

### NEW QUESTION # 36

Which of the following is the customer's responsibility in both on-premise and private cloud scenarios?

- A. Database
- B. Servers
- C. Middleware
- D. Operating system

**Answer: C**

### NEW QUESTION # 37

After you completed the Explore Phase Quality Gate you notice that the Fit to Standard workshops have been carried out without the input of the finance experts of the Australian office of the customer. The Australian office is scheduled to go live in a later implementation phase. What should you do? Note: There are 2 correct answers to this question.

- A. Review the scope items to ensure their functionality is available and appropriate for use by Australian users.
- B. Proceed with the as-is plan because the Australian office of the customer is scheduled for a later implementation phase.
- C. Put the project on hold and run all required Fit to Standard workshops with Australian users.
- D. Get approval from Australian key users on any of the configuration items that cannot be changed after system provisioning.

**Answer: A,D**

Explanation:

The Explore phase, including Fit-to-Standard workshops, is critical for validating the solution fit for SAP S/4HANA Cloud Public Edition. Missing input from a key office, such as the Australian finance experts, requires careful handling, especially if they are part of a later implementation phase.

\* Option A: Put the project on hold and run all required Fit to Standard workshops with Australian users. Incorrect. Halting the project is unnecessary and disrupts the timeline, as the Australian office is scheduled for a later phase. The SAP Activate Methodology Guide advises, "For phased implementations, input from later-phase stakeholders can be gathered post-Explore, provided critical configurations are validated."

\* Option B: Proceed with the as-is plan because the Australian office of the customer is scheduled for a later implementation phase. Incorrect. Proceeding without any action risks misaligned configurations that may be locked post-provisioning, impacting the Australian office. The SAP S/4HANA Cloud Implementation Guide warns, "Ignoring key stakeholder input in early phases can lead to costly rework if non-changeable configurations are misaligned."

\* Option C: Get approval from Australian key users on any of the configuration items that cannot be changed after system provisioning. Correct. Configurations like group currency or Fiscal Year Variant are locked after provisioning, so securing approval from Australian users ensures alignment.

The SAP Central Business Configuration Guide states, "For configurations that cannot be changed post-provisioning, such as group currency, approval from all relevant stakeholders, including future-phase users, is critical before finalizing."

\* Option D: Review the scope items to ensure their functionality is available and appropriate for use by Australian users. Correct. Reviewing scope items ensures that the selected processes meet the needs of the Australian office, preventing gaps in later phases. The SAP S/4HANA Cloud Study Guide notes, "Scope item validation should consider all planned implementation phases to ensure functionality is appropriate for all regions or offices." Extract from Official Documentation:

\* SAP Central Business Configuration Guide (SAP Help Portal, <https://help.sap.com>): "Non-changeable configuration items, such as group currency and Fiscal Year Variant, require approval from all relevant stakeholders, including those in later implementation phases, to avoid misalignment."

\* SAP S/4HANA Cloud Implementation Guide: "For multi-phase implementations, scope items should be reviewed to ensure functionality meets the needs of all regions, and non-changeable configurations must be validated with future-phase stakeholders."

Additional Context:

In phased implementations, balancing progress with inclusivity is key. Engaging Australian users for critical configurations and scope validation ensures a scalable solution without delaying the project, aligning with SAP's agile and iterative approach.

SAP Help Portal: SAP Central Business Configuration Guide (<https://help.sap.com>).

SAP S/4HANA Cloud Implementation Guide: Details phased implementations.

SAP Activate Methodology Guide: Outlines Explore phase best practices.

SAP S/4HANA Cloud Study Guide: Explains scope and configuration validation.

### NEW QUESTION # 38

You are defining the testing strategy for your project. What would you include in a Scope of Integration test?

Note: There are 2 correct answers to this question.

- A. The connectivity between database and application servers
- B. The procedures for data migration
- C. The connectivity with other systems
- D. The functionality of end-to-end business processes

**Answer: C,D**

Explanation:

Integration testing in SAP S/4HANA Cloud Public Edition projects ensures that interconnected components and systems function correctly together, validating both internal and external integrations as part of the testing strategy.

\* Option A: The functionality of end-to-end business processes Correct. Integration tests verify that end-to-end business processes, which often span multiple modules or systems, function as expected. The SAP S/4HANA Cloud Testing Guide states, "The scope of integration testing includes validating the functionality of end-to-end business processes to ensure seamless operation across integrated components."

\* Option B: The procedures for data migration Incorrect. Data migration procedures are validated through data migration testing, not integration testing. The SAP S/4HANA Cloud Migration Guide notes,

"Data migration testing focuses on verifying data transfer accuracy, separate from integration testing of business processes."

\* Option C: The connectivity between database and application servers Incorrect. Connectivity between database and application servers is part of technical or system testing, not integration testing.

The SAP S/4HANA Cloud Implementation Guide clarifies, "Technical connectivity, such as database-to-server links, is validated through system testing, not integration testing."

\* Option D: The connectivity with other systems Correct. Integration testing includes verifying connectivity and data exchange with external systems. The SAP S/4HANA Cloud Testing Guide explains,

"Integration testing scope encompasses connectivity with other systems, ensuring accurate data flow and interaction with external applications." Extract from Official Documentation:

\* SAP S/4HANA Cloud Testing Guide (SAP Help Portal, <https://help.sap.com>): "Integration testing for SAP S/4HANA Cloud Public Edition includes validating end-to-end business process functionality and connectivity with other systems to ensure seamless integration across the solution landscape."

\* SAP S/4HANA Cloud Implementation Guide (SAP Community, <https://community.sap.com>): "The scope of integration testing focuses on end-to-end processes and system connectivity, verifying that integrated components and external systems operate correctly together." Additional Context:

Integration testing is critical in the Realize phase to ensure that SAP S/4HANA Cloud integrates seamlessly with other systems and supports end-to-end processes, aligning with the SAP Activate methodology's emphasis on comprehensive validation before deployment.
