Nowadays, having knowledge of the 156-315.81 study braindumps become widespread, if you grasp solid technological knowledge, you are sure to get a well-paid job and be promoted in a short time. According to our survey, those who have passed the exam with our 156-315.81 test guide convincingly demonstrate their abilities of high quality, raise their professional profile,

expand their network and impress prospective employers. Most of them give us feedback that they have learned a lot from our 156-315.81 Exam Guide and think it has a lifelong benefit. They have more competitiveness among fellow workers and are easier to be appreciated by their boss.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q581-Q586):

NEW QUESTION # 581

Which Check Point daemon monitors the other daemons?

- A. cpd
- B. fwssd
- C. fwm
- D. cpwd

Answer: D

Explanation:

The Check Point daemon that monitors the other daemons is cpwd (Check Point Watchdog). It is responsible for monitoring the health and status of various Check Point daemons and processes running on the Security Gateway. If any daemon or process stops responding or encounters an issue, cpwd can restart it to ensure the continued operation of the Security Gateway.

NEW QUESTION # 582

Fill in the blanks: In the Network policy layer, the default action for the Implied last rule is ____ all traffic. However, in the Application Control policy layer, the default action is _____ all traffic.

- A. Accept; drop
- B. Accept; redirect
- C. Redirect; drop
- D. Drop; accept

Answer: D

Explanation:

In the Network policy layer, the default action for the Implied last rule is drop all traffic. However, in the Application Control policy layer, the default action is accept all traffic. The Implied last rule is a rule that is automatically added at the end of each policy layer and defines what to do with traffic that does not match any of the user-defined rules. The default actions for each policy layer can be changed in the Global Properties or in the layer properties. References: R81 Security Management Administration Guide, page 30.

NEW QUESTION # 583

When installing a dedicated R81 SmartEvent server. What is the recommended size of the root partition?

- A. Less than 20GB
- B. At least 20GB
- C. More than 10GB and less than 20GB
- D. Any size

Answer: B

Explanation:

At least 20GB is the recommended size of the root partition when installing a dedicated R81 SmartEvent server. The root partition is the primary partition that contains the operating system files and other essential files for booting and running the system. The SmartEvent server requires at least 20GB of free space on the root partition to install and operate properly. If the root partition size is less than 20GB, you may encounter errors or performance issues with SmartEvent. Reference: Check Point Security Expert R81 Course, SmartEvent Administration Guide

NEW QUESTION # 584

What is required for a site-to-site VPN tunnel that does not use certificates?

- **A. Pre-Shared Secret**
- B. Unique Passwords
- C. SecureID
- D. RSA Token

Answer: A

Explanation:

A pre-shared secret is a secret key that is shared between the two VPN peers before establishing a secure connection. It is used to authenticate the VPN peers and encrypt the VPN traffic. A pre-shared secret is required for a site-to-site VPN tunnel that does not use certificates, because certificates are another way of authenticating the VPN peers using public key cryptography. Without certificates, the VPN peers need to have a common secret key that only they know. References: Check Point R81 VPN Administration Guide, page 13

NEW QUESTION # 585

How would you deploy TE250X Check Point appliance just for email traffic and in-line mode without a Check Point Security Gateway?

- **A. You can utilize only Check Point Cloud Services for this scenario.**
- B. Install appliance TE250X on SpanPort on LAN switch in MTA mode.
- C. Install appliance TE250X in standalone mode and setup MTA.
- D. It is not possible, always Check Point SGW is needed to forward emails to SandBlast appliance.

Answer: A

Explanation:

Explanation

To deploy a TE250X Check Point appliance just for email traffic and in-line mode without a Check Point Security Gateway, you can utilize Check Point Cloud Services. In this scenario, you can leverage cloud-based email security services provided by Check Point without the need for an on-premises Security Gateway.

Option C correctly states that you can use only Check Point Cloud Services for this scenario, making it the verified answer.
