Preparation Process for EC-Council 312-76 Exam

Without a doubt, the certification process is not easy. To achieve success in any exam, the candidates must be adequately prepared and cover all the topics associated with the test. Thus, for EC-Council 312-76, you can also follow an effective preparation process that guarantees success. If looking at the simple process that the individuals can follow to attain the desired passing score in this exam, the below-mentioned steps will be included:

- **Enroll for the Official Training Course:** The blueprint only highlights the skill areas that you must explore, while the official training course delves into more details. The EDRP course equips the individuals with a strong knowledge of the principles of business continuity & disaster recovery. It covers the areas, such as performing business impact analysis, evaluating risks, implementing plans, and developing procedures & policies. You will also gain the relevant skills in securing data through the process of putting procedures and policies in place. The applicants can also learn how to recover & restore critical data of an organization after a disaster. It is possible to take this training as a self-study option or choose the online live training variant or master class. You may also choose to enroll for the in-person course with a certified training partner.

- **Study the Exam Blueprint:** The exam blueprint has detailed information about the topics and subtopics that the candidates must study in preparation for their certification test. It is highly recommended to go through the official webpage to download this file to be sure in the overall content of the exam.
- **Take Practice Tests:** When you have completed the training course, the next step is to evaluate your knowledge of what you have learned. You can use practice tests to measure how well you have understood the topics and know how to cover any weak areas that you may discover in the process. Taking them in a simulated environment will give you a feel of the real exam.

EC-COUNCIL EC-Council Disaster Recovery Professional (EDRP) Sample Questions (Q155-Q160):

NEW QUESTION # 155

Organizations must assess the safety of their workplaces and consider the ability of a business to continue despite risk impact. When assessing business continuity risks, the HR Professional must consider several different types of disasters, their probability, and impact on an organization.

What category of disaster is best described as acts of terrorism, major thefts, sabotage, or labor disputes?

- A. Environmental disasters
- B. Serious information security incidents
- C. Organized or deliberate disruptions
- D. System failures

Answer: C

NEW QUESTION # 156

Which of the following modes of operation supports users with different clearances and data at various classification levels?

- A. Multilevel mode
- B. Limited Access
- C. Compartmented
- D. Dedicated

Answer: A

Explanation:

NEW QUESTION # 157

The IT department of ABC Inc. had a practice of storing replicas of the various database servers housed in the organization. One such database server housed the annual sales, profit/loss, revenue, and other such important data of the organization. The IT department did not want to take frequent replicas of that database since it was updated just once a year and frequent replicas would unnecessarily take storage space and eat into the bandwidth of the organization. In this scenario, the IT department decided to copy the data changes from the original database server to a replica database server annually. Which of the following solutions did the IT department implement in this scenario?

- A. Merge Replication
- B. Snapshot Replication

- C. Transactional Replication
- D. SQL Server Replication

Answer: B

Explanation:

Snapshot Replication copies the entire dataset (or changes) at a specific point in time to a replica, ideal for infrequent updates like ABC Inc.'s annual database refresh. It's simple and suits low-frequency synchronization.

- * Option A (Merge Replication): Combines changes from multiple sources, complex for this case.
- * Option B (Transactional Replication): Tracks incremental changes in real time, overkill here.
- * Option C (SQL Server Replication): A general category, not a specific method.
- * "Snapshot Replication provides a point-in-time copy of data, efficient for infrequent updates where full synchronization is needed annually" (Module: Data Replication, Section: Replication Types).

NEW QUESTION # 158

Which of the following methods is a means of ensuring that system changes are approved before being implemented, and the implementation is complete and accurate?

- A. Configuration control
- B. Configuration identification
- C. Configuration auditing
- D. Documentation control

Answer: D

NEW QUESTION # 159

Seth wants to get an approximate picture of the likelihood of the risks that were identified by his organization.

After getting a high-level understanding of their probability, he could dedicate his resources to risk mitigation according to the priorities since he was a bit under-staffed. He was told that out of the identified risks, the occurrence of an earthquake was highly unlikely owing to the geography of their location. Furthermore, he learned that the chances of a fire breaking out in his building were high and his facility also faced a risk of physical intrusion but that was partly under control owing to the physical guards. What kind of risk assessment is Seth essentially conducting?

- A. Semi-Qualitative Risk Assessment
- B. Semi-Quantitative Risk Assessment
- C. Quantitative Risk Assessment
- D. Qualitative Risk Assessment

Answer: D

Explanation:

Qualitative Risk Assessment evaluates risks based on subjective likelihood (e.g., "high," "low") and impact, without precise numerical values, fitting Seth's high-level probability approach.

- * Option A (Quantitative): Uses numerical data (e.g., percentages), not applicable here.
- * Option C (Semi-Qualitative): A hybrid, but Seth's method is fully qualitative.
- * Option D (Semi-Quantitative): Combines numbers with qualitative, not evident here.
- * "Qualitative Risk Assessment prioritizes risks using descriptive scales (e.g., high, low) for probability and impact, ideal for resource-constrained planning" (Module: Risk Management, Section: Assessment Types).
