Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q68-Q73):

NEW QUESTION # 68

A large enterprise has multiple independent business units. What Mist architectural construct allows them to manage their own respective sites and devices while being part of the same parent account?

- A. Labels
- B. Sites

- C. Organizations
- D. Subscriptions

Answer: C

NEW QUESTION # 69

A client device is associated to a Mist AP and is functioning correctly. A network administrator wants to move this AP to a different site in the same organization. What is the correct procedure to move the AP in the Mist UI?

- A. Create a device profile for the new site and add the AP's MAC address to it.
- B. In the AP's configuration page, change the "Site Assignment" property to the new site.
- C. In the Organization > Inventory page, select the AP and use the "Assign to Site" option in the More menu.
- D. Delete the AP from the current site and then re-claim it into the new site.

Answer: C

NEW QUESTION # 70

Which type of frame is used by a client device to actively scan for available Wi-Fi networks?

- A. Beacon frame
- B. Association Request frame
- C. Authentication frame
- D. Probe Request frame

Answer: D

NEW QUESTION # 71

What are two functions of Mist Radio Resource Management (RRM)? (Choose two.)

- A. Ethernet configurations
- B. transmit power control
- C. WLAN scheduling
- D. channel assignment

Answer: B,D

Explanation:

Mist Radio Resource Management (RRM) performs several functions including transmit power control and channel assignment which help optimize wireless network performance by dynamically adjusting radio settings based on changing environmental conditions. So, the correct answers are A. transmit power control and C. channel assignment. According to the Cisco Catalyst 9800 Series Wireless Controller Software Configuration Guide 1, two functions of Mist Radio Resource Management (RRM) are:

* Transmit power control, which adjusts the transmit power of APs based on their coverage area and interference level.

* Channel assignment, which assigns channels to APs based on their location and interference level.
