

100% Pass 2026 Salesforce Unparalleled Plat-Dev-210: Practice Salesforce Certified Omnistudio Developer Exam Pdf

2026 Latest PrepAwayExam Plat-Dev-210 PDF Dumps and Plat-Dev-210 Exam Engine Free Share:
<https://drive.google.com/open?id=1aLSuG8R59DZxWLWpGe5PTzJu9lMxllCg>

It can be said that all the content of the Plat-Dev-210 study materials are from the experts in the field of masterpieces, and these are understandable and easy to remember, so users do not have to spend a lot of time to remember and learn. It takes only a little practice on a daily basis to get the desired results. Especially in the face of some difficult problems, the user does not need to worry too much, just learn the Plat-Dev-210 Study Materials provide questions and answers, you can simply pass the exam. This is a wise choice, and in the near future, after using our Plat-Dev-210 training materials, you will realize your dream of a promotion and a raise, because your pay is worth the rewards.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
Topic 2	<ul style="list-style-type: none">• Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

Topic 3	<ul style="list-style-type: none"> • Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
Topic 4	<ul style="list-style-type: none"> • Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.
Topic 5	<ul style="list-style-type: none"> • Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.

Three Main Formats of Plat-Dev-210 Exam Practice Material

Our PDF version is a printable document of exam questions which are real and updated. We have included original Salesforce Certified Omnistudio Developer questions in this format so that can you get ready for the exam quickly by just memorizing them. This format of Salesforce Certified Omnistudio Developer (Plat-Dev-210) test questions is also usable on smart devices such as laptops, tablets, and smartphones.

Salesforce Certified Omnistudio Developer Sample Questions (Q64-Q69):

NEW QUESTION # 64

A developer needs to create DataRaptor to retrieve the name of an account for a contact. Following best practices, how should a developer configure the extraction steps?

- A. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Account.Name
- B. Define extraction steps for the Contact and the Account objects, and set the Extract JSON Path to Contact Account.Name
- **C. Define an extraction step for the Contact object and set the Extract JSON Path to Contact Account.Name**
- D. Define an extraction step for the Account object, and set the Extract JSON Path to AccountContact.Name

Answer: C

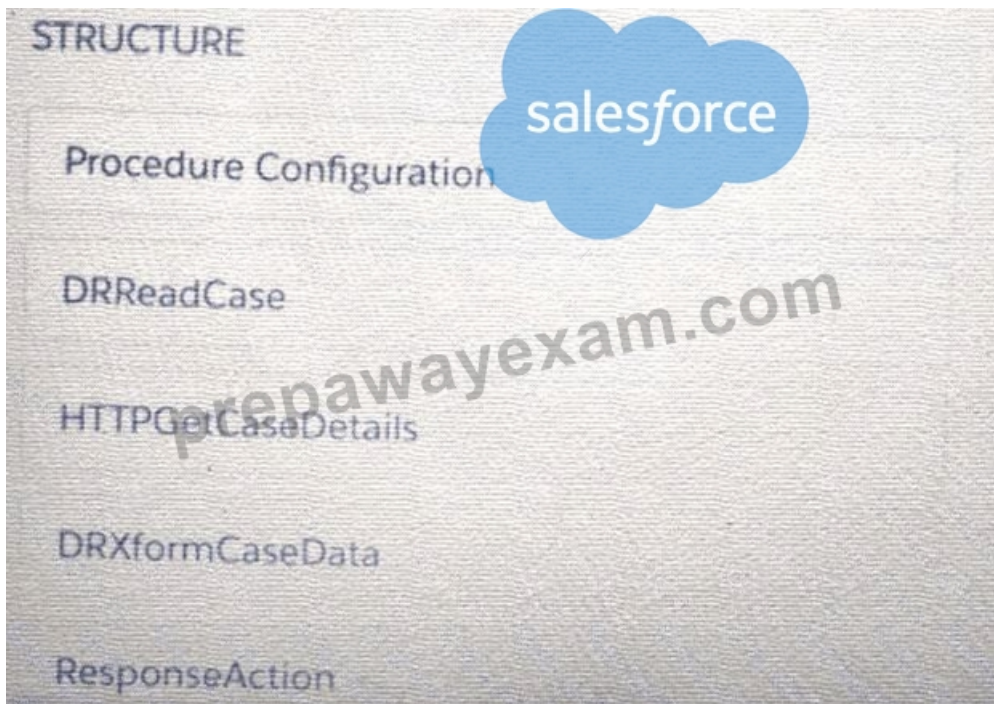

Explanation:

A DataRaptor Extract can retrieve data from multiple objects using extraction steps and JSON paths.

However, if the data is from a single object, only one extraction step is needed. The Extract JSON Path can use dot notation to access related fields from that object, such as Contact.Account.Name.

NEW QUESTION # 65

Refer to the exhibit below. What is the merge code needed for this Integration Procedure structure to pass a CaseData node from the HTTP Action's output to the DataRaptor Transform Action?

- A. {{CaseData}}
- B. {{ HTTPGetCaseDetails:CaseData }}
- C. %DRXformCaseData: CaseData%
- D. %HTTPGetDetails:CaseData%

Answer: B

Explanation:

The merge code syntax for accessing a node from an Integration Procedure output is {{ProcedureName: NodeName}}. In this case, the ProcedureName is HTTPGetCaseDetails and the NodeName is CaseData. The % sign is used for single-value merge codes, not node merge codes. The \$ sign is used for variables, not merge codes.

NEW QUESTION # 66

A developer needs to limit the output of a Data Mapper Extract to a maximum of one result. How should the developer configure this?

- A. Use a Custom Output Type when creating the Data Mapper.
- B. Use the LIMIT filter on the Extract definition.
- C. Define a formula with the Filter function.
- D. Set the Limit property on the action that calls the Data Mapper Extract.

Answer: D

Explanation:

According to the OmniStudio DataRaptor Extract documentation, if a developer wants to limit the number of records returned, the best way is to set the "Limit" property on the element or action that is calling the DataRaptor, such as in an Integration Procedure or OmniScript Action.

* A. Set the Limit property on the action that calls the Data Mapper Extract - This is the correct method. The calling context (e.g., OmniScript Action or Integration Procedure) includes a property for setting the limit on query results, which is a recommended and clean method to ensure only one record is retrieved.

Incorrect Options:

- * B. There is no "LIMIT" clause within the DataRaptor Extract definition UI or JSON definition itself.
- * C. Custom Output Type controls the structure, not the quantity of output.
- * D. The Filter function applies conditional logic, not record count.

Salesforce OmniStudio Developer Guide # DataRaptor Extract Configuration

NEW QUESTION # 67

A developer creates an Integration Procedure with a Set Values and a DataRaptor Extract Action that requires AccountId as a key. When the developer previews the Integration Procedure, the developer enters the AccountId correctly and executes the Preview. The developer sees the data extracted by the DataRaptor in the Debug Log, but the response is empty. What is the likely cause of this issue?

- A. The DataRaptor Action did not have the add response Response JSON property set to true.
- B. The Response cannot be previewed directly.
- C. The AccountId used for the preview is invalid.
- **D. A Response Action was not added to the integration Procedure.**

Answer: D

Explanation:

According to the OmniStudio Developer Guide, "To return a response from an Integration Procedure, add a Response action as the last action in your Integration Procedure." Therefore, the correct answer is C.

NEW QUESTION # 68

Which two fields in an Integration Procedure or Data Mapper can execute a function like CONCAT or DATEDIFF? Choose 2 answers

- **A. In a Set Values Action in a Value field**
- B. In a Data Mapper in an Output Tab Output JSON Path
- C. In a Remote Action in an Additional Output value field
- **D. In a Data Mapper Action in an Input Parameters value field**

Answer: A,D

Explanation:

Functions like CONCAT, DATEDIFF, and IF are supported in value fields where expressions can be parsed at runtime.

* B. In a Set Values Action in a Value field - Correct. The Set Values element supports expression functions in its Value field, allowing for real-time evaluation during IP execution.

* C. In a Data Mapper Action in an Input Parameters value field - Correct. Input Parameters to DataRaptors in Integration Procedures can use expression logic to dynamically compute and pass values.

Incorrect Options:

* A. Output JSON Path in DataRaptor is for structural mapping, not function execution.

* D. Remote Action Output fields typically receive data, not compute it.

NEW QUESTION # 69

.....

Our test bank includes all the possible questions and answers which may appear in the real exam and the quintessence and summary of the exam papers in the past. We strive to use the simplest language to make the learners understand our Plat-Dev-210 study materials and the most intuitive method to express the complicated and obscure concepts. For the learners to fully understand our Plat-Dev-210 Study Materials, we add the instances, simulation and diagrams to explain the contents which are very hard to understand. So after you use our Plat-Dev-210 study materials you will feel that our Plat-Dev-210 study materials' name matches with the reality.
