

Free PDF Fantastic 2V0-17.25 - New VMware Cloud Foundation 9.0 Administrator Test Papers

P.S. Free & New 2V0-17.25 dumps are available on Google Drive shared by Actualtests4sure: <https://drive.google.com/open?id=1FX6Vl0ER4GE-qcq935Dq6f0gMR-V25eS>

Using 2V0-17.25 exam prep is an important step for you to improve your soft power. I hope that you can spend a little time understanding what our study materials have to attract customers compared to other products in the industry. 2V0-17.25 exam dumps have a higher pass rate than products in the same industry. If you want to pass 2V0-17.25 Certification, then it is necessary to choose a product with a high pass rate. Our study materials guarantee the pass rate from professional knowledge, services, and flexible plan settings. According to user needs, 2V0-17.25 exam prep provides everything possible to ensure their success.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.
Topic 2	<ul style="list-style-type: none">• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	<ul style="list-style-type: none">• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.

Topic 4	<ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.

2V0-17.25 Guide Torrent: VMware Cloud Foundation 9.0 Administrator & VMware Cloud Foundation 9.0 Administrator Dumps VCE

Actualtests4sure are supposed to help you pass the exam smoothly. Don't worry about channels to the best 2V0-17.25 study materials because we are the exactly best vendor in this field for more than ten years. And so many exam candidates admire our generosity of the 2V0-17.25 Practice Questions offering help for them. Up to now, no one has ever challenged our leading position of this area. With our 2V0-17.25 training guide, you will be doomed to pass the exam successfully.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q59-Q64):

NEW QUESTION # 59

An administrator is tasked to obtain an overview of all VMware vSAN and non-vSAN datastores within a VMware Cloud Foundation (VCF) environment using VCF Operations.

Where can the administrator access the required information?

- A. Storage Overview
- B. Diagnostic Findings
- C. VCF Health
- D. Data Protection & Recovery

Answer: A

Explanation:

The Storage Overview dashboard in VCF Operations provides consolidated visibility into storage resources, including:

vSAN datastores

VMFS datastores

NFS datastores

Capacity utilization

Performance metrics

Health indicators

The VCF documentation states:

"The Storage Overview dashboard provides a unified view of storage capacity, performance, and health across vSAN and non-vSAN datastores." Other options are not suitable:

VCF Health (A) focuses on component health (vCenter, NSX, ESXi).

Data Protection & Recovery (B) covers backup and DR insights.

Diagnostic Findings (C) highlights detected issues but not comprehensive storage inventory.

Thus, the correct location is the Storage Overview dashboard.

NEW QUESTION # 60

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The administrator has been tasked with creating a solution that allows Kubernetes development teams to complete the self-service creation of Active Directory (AD) accounts with the following requirements:

- Only users within the Development tenant should be able to create user accounts.
- Users must be able to create and destroy user accounts in the development AD only.
- The administrator has already deployed a dedicated VCF Operations Orchestrator for the Development tenant.

What four additional tasks must the administrator complete to meet the stated objective? (Choose four.)

- A. Create a Custom Resource object and select the appropriate VCF Operations Orchestrator workflows for object creation and destruction.
- B. Publish the Active Directory User creation workflow to the self-service catalog in VCF Automation through the Content Hub.
- C. Configure the VCF Operations Orchestrator integration to utilize the embedded VCF Operations Orchestrator.
- D. Configure the VCF Operations Orchestrator integration to connect to the dedicated VCF Operations Orchestrator.
- E. Configure the VCF Operations Orchestrator Active Directory plugin to connect to the development Active Directory.
- F. Configure the VCF Operations Orchestrator Active Directory plugin to connect to the production Active Directory.
- G. Publish the Active Directory User creation action to the self-service catalog in VCF Automation through the Content Hub.

Answer: A,B,D,E

Explanation:

Orchestrator Integration (B): The tenant must be connected to the dedicated Orchestrator instance rather than the embedded one.

Documentation notes: "Each tenant can integrate with its own Orchestrator endpoint for workflow execution." AD Plugin

Configuration (E): The Orchestrator Active Directory plugin must be configured against the development AD only, ensuring that the development team does not impact the production directory.

Publish Workflow (C): The AD user creation workflow must be published to the VCF Automation catalog using the Content Hub.

Actions alone are insufficient; workflows are the full automation logic exposed to end users.

Custom Resource Object (F): To enable developers to create and destroy AD accounts, a Custom Resource object must be created in VCF Automation and mapped to the Orchestrator workflows. This provides lifecycle capabilities (create/destroy) in the self-service catalog.

NEW QUESTION # 61

A security team informed an administrator that a VMware vCenter root password was compromised. As a precaution, the password was changed directly in vCenter. What should an administrator do to regain management capability of this vCenter by VCF Operations?

- A. Enter the new root password using the Update password function in VCF Operations.
- B. Use the Rotate password function in VCF Operations.
- C. Enter the new root password using the Reset password function in VCF Operations.
- D. Enter the new root password using the Remediate password function in VCF Operations.

Answer: D

Explanation:

When an error occurs, for example after a password expires, you must manually reset the password in the component product.

After you reset the password in a component, you must remediate the password in VCF Operations. "Password Rotation" is different--it "allows you to orchestrate the rotation" of stored credentials (a planned, VCF-driven change), not reconcile an externally altered password. Therefore, after the direct password change in vCenter, the correct recovery step in VCF Operations is to use Remediate password to synchronize credentials and restore management from VCF Operations.

NEW QUESTION # 62

Why is a Container Storage Interface (CSI) necessary?

- A. CSI provides containers access to ephemeral storage.
- B. CSI replaces all 3rd party storage provider interfaces.
- C. CSI provides persistent storage functionality to containers.
- D. CSI allows applications to dynamically detect storage.

Answer: C

Explanation:

The Container Storage Interface is necessary because it enables containers and containerized workloads to consume persistent storage, allowing data to survive pod restarts, rescheduling, and lifecycle events.

NEW QUESTION # 63

An administrator is tasked with deploying a new VMware vSAN-backed vSphere cluster.

Environment:

Existing VCF instance with two workload domains.

Each workload domain has one vSphere cluster.

The new cluster must be lifecycle-managed and scaled independently from existing clusters.

Which action must the administrator take?

- A. Deploy the new vSphere cluster as a new workload domain with a new NSX instance within the existing VCF instance.
- B. Deploy the new vSphere cluster on one of the existing workload domains within the existing VCF instance.
- C. Deploy the new vSphere cluster on one of the non-management workload domains within the existing VCF instance.
- **D. Deploy the new vSphere cluster as a new workload domain with shared NSX within the existing VCF instance.**

Answer: D

Explanation:

In VMware Cloud Foundation, lifecycle management boundaries are defined at the workload domain level. If independent lifecycle and scaling control is required, the cluster must be deployed as a separate workload domain.

VCF 9.0 supports workload domains that either:

Use a dedicated NSX instance, or

Share an existing NSX Manager instance.

Because the requirement only states independent lifecycle and scaling (not network isolation), the correct and efficient approach is to:

Deploy the new cluster as a new workload domain with shared NSX.

Deploying within an existing workload domain (A or B) would tie lifecycle operations together.

Deploying with a new NSX instance (C) is unnecessary unless full NSX isolation is required.

Thus, the correct action is D.

NEW QUESTION # 64

.....

Every day is new beginning; we will have a good mood. Hot and outstanding IT certification will be a good beginning for your IT career road. VMware 2V0-17.25 current exam content will be a strong helper for you. If you want to realize your dream and get a certification, Actualtests4sure provide the best valid VMware 2V0-17.25 Current Exam Content materials to help you pass tests. And you will have a great progress in a short time.
