PECB Certified ISO 45001 Lead Auditor Exam 認定 ISO-45001-Lead-Auditor 試験問題 (Q45-Q50):

質問 # 45

Select the two options which represent an advantage of using a sampling plan for the audit.

- A. Overrides the auditor's instincts
- B. Implements the audit plan efficiently

- C. May require an increased audit duration
- D. May miss key issues
- E. Gives confidence in the audit results
- F. Use of the plan for consecutive audits without review

正解: B、E

質問 # 46

What is the definition of the term 'audit' as per clause 3.32 of ISO 45001:2018?

- A. A systematic process to assess the risks in a workplace
- B. A legal requirement to comply with health and safety standards
- C. A document that outlines safety procedures and guidelines
- D. An evaluation of the effectiveness of health and safety measures

正解: D

解説:

According to Clause 3.32 of ISO 45001:2018, an audit is defined as a systematic, independent, and documented process for obtaining objective evidence and evaluating it to determine the extent to which audit criteria are fulfilled.

This involves assessing the effectiveness of health and safety measures implemented in the organization's OH&S management system.

Analysis of Options:

A . A systematic process to assess the risks in a workplace:

Incorrect. While audits may include risk assessments, the purpose is broader and involves evaluating the entire OH&S management system.

B . An evaluation of the effectiveness of health and safety measures:

Correct. This aligns with the definition of an audit as per ISO 45001:2018.

C . A legal requirement to comply with health and safety standards:

Incorrect. An audit is not necessarily a legal requirement but a process to assess conformity.

D . A document that outlines safety procedures and guidelines:

Incorrect. An audit is a process, not a document.

ISO Reference:

Clause 3.32: Audit definition.

質問 # 47

Showitoff is an organisation specialising in the design and production of wall decorating material for the domestic market. During an ISO 45001 certification audit of the site, the auditor comes across an open, walled area just outside the maintenance department. It contains various scraps of wood and metal as well as several rusty components. Several heavy concrete beams are leaning against a thin brick wall in which cracks are visible. When asked about it, the OHS Manager states that he presumes that the material come from maintenance work, so it is the Maintenance Manager's responsibility.

The auditor interviews the Maintenance Manager in his department. He asks about the area outside and is told that it contains some excess materials that the Manager likes to keep in case they come in handy at some stage. The auditor points out that the wall appears to be unstable collapse at any moment. The Maintenance Manager is not aware of such a situation.

Which three statement represent good audit practice?

- A. The auditor should consider surveying more areas of the site for other potentially unsafe situations.
- B. The audit should demand that the Maintenance Manager deals with the wall.
- C. The auditor should check whether the organization has identified the safety hazards associated with the walled area.
- D. The auditor should advice the organisation to get rid of the walled area.
- E. The audit should ask the Maintenance Manager to conduct a safety survey.
- F. The audit should refer the organization to the health and safety authorities.
- G. The audit should raise a nonconformity against ISO 45001.
- H. The audit should check the lines of communication between the OHS Manager and maintenance Manager.

正解: A、C、H

解説:

Comprehensive Detailed Explanation along with All ISO 45001 Audit Reference Clause 6.1.2 of ISO 45001:2018 emphasizes the identification of hazards and assessment of risks, and Clause 5.4 highlights the importance of consultation and communication among

roles. The auditor's role includes verifying conformity to these clauses through evidence gathering and observation.

Analysis of Options:

A :The auditor should advise the organization to get rid of the walled area.

This is outside the scope of an auditor's role, which is to observe and report findings, not to dictate specific actions.

B :The auditor should ask the Maintenance Manager to conduct a safety survey.

While safety surveys are useful, asking the Maintenance Manager to conduct one is not the auditor's responsibility.

C :The auditor should check the lines of communication between the OHS Manager and Maintenance Manager.

This aligns with ISO 45001:2018, Clause 5.4, as communication gaps may have contributed to the situation.

D :The auditor should check whether the organization has identified the safety hazards associated with the walled area.

Clause 6.1.2 requires hazard identification. The auditor must determine whether this has been done.

E:The auditor should consider surveying more areas of the site for other potentially unsafe situations.

Broadening the audit scope to identify additional risks is a good practice in line with Clause 9.2.2.

F :The auditor should demand that the Maintenance Manager deals with the wall.

Demanding action is not within the auditor's authority. The auditor should raise findings instead.

G :The auditor should raise a nonconformity against ISO 45001.

While this may be appropriate depending on evidence, raising a nonconformity is not a replacement for good audit practices.

H :The auditor should refer the organization to health and safety authorities.

This step is extreme and should only occur if there is an imminent danger and no action is being taken.

ISO Reference:

Clause 6.1.2: Hazard identification and risk assessment.

Clause 5.4: Worker consultation and participation.

Clause 9.2.2: Internal audit program and execution.

質問 # 48

Which of the following standards talk about the Environment Management System? Select all the correct options, and then select Submit.

- A. ISO 14501
- B. ISO 14001
- C. Integrated Management system
- D. ISO 45001

正解: B、C

解説:

Analysis of Options:

* A. Integrated Management System:Correct. An Integrated Management System (IMS) combines multiple standards like ISO 45001, ISO 14001, and ISO 9001, addressing environment management as part of the integration.

* B. ISO 14501:Incorrect. ISO 14501 pertains to milk and milk products, not environmental management.

* C. ISO 45001:Incorrect. ISO 45001 focuses on Occupational Health and Safety, not environmental management.

* D. ISO 14001:Correct. ISO 14001 is the primary standard for Environmental Management Systems.

ISO References:

* ISO 14001: Environment Management Systems.

* Integrated Management Systems: Combines standards like ISO 14001 and ISO 45001.

質問 # 49

What does ISO 45001 say are the hazards that have to be considered when planning a health and safety management system? Select the ONE best answer.

- A. Work hazards and environmental factors such as bad weather
- B. Work activities where there is the possibility of danger
- C. Hot-work, working at height, enclosed space entry, and work on electrical equipment
- D. Work activities, workplace design, and human factors such as hours of work and bullying and harassment

正解: D

解説:

ISO 45001:2018 requires a holistic approach to occupational health and safety. This means considering all aspects that could impact worker well-being, not just obvious physical hazards. The correct answer encompasses work activities (the tasks themselves),

workplace design (the physical environment), and human factors (psychological and social aspects like working hours and harassment). It's the most comprehensive and aligned with the standard's philosophy ISO 45001:2018, Clause 6.1.2, outlines requirements for hazard identification. Hazards to consider include work activities, workplace design, human factors, and social factors that may impact OH&S. These go beyond traditional physical risks and include psychosocial and organizational hazards.

Analysis of Options:

* A. Work activities, workplace design, and human factors such as hours of work and bullying and harassment: Correct. This comprehensively addresses hazard categories outlined in ISO 45001, Clause 6.1.2.

* B. Work activities where there is the possibility of danger: Too general. ISO 45001 includes broader categories of hazards, including those related to organizational and social factors.

* C. Hot-work, working at height, enclosed space entry, and work on electrical equipment: Too narrow. These are specific hazards but do not encompass the full range outlined in ISO 45001.

* D. Work hazards and environmental factors such as bad weather: Incomplete. While environmental factors are relevant, ISO 45001 also includes workplace design, human factors, and psychosocial hazards.

ISO References:

* Clause 6.1.2.1: Hazard identification.

* Annex A.6.1.2: Examples of hazard categories, including workplace design and human factors.
