ITIL ITIL-4-Transition Exam Registration | Test ITIL-4-Transition Passing Score

Based on high-quality products, our ITIL-4-Transition guide torrent has high quality to guarantee your test pass rate, which can achieve 98% to 100%. ITIL-4-Transition study tool is updated online by our experienced experts, and then sent to the user. And we provide free updates of ITIL-4-Transition training material for one year after your payment. The data of our ITIL-4-Transition Exam Torrent is forward-looking and can grasp hot topics to help users master the latest knowledge. And you can also free download the demo of ITIL-4-Transition exam questions to have a check.

ITIL 4 Managing Professional Transition Sample Questions (Q31-Q36):

NEW QUESTION # 31

What is used as a tool to help define and measure performance?

- A. A service level agreement
- B. A continual improvement register
- C. An incident record
- D. A change schedule

Answer: A

Explanation:

Comprehensive Explanation:

A Service Level Agreement (SLA) is specifically designed to:

- * Define expected levels of service
- * Set targets for performance
- * Provide a basis for measuring actual service performance

Thus, the SLA functions as the primary tool for defining and measuring service performance in ITIL 4. Therefore, Option A is correct.

NEW QUESTION # 32

Which high velocity IT objective considers an organization's ability to continue providing business services when disruptive events affect its digital products?

- A. Assured conformance
- **B. Resilient operations**
- C. Valuable investments
- D. Fast development

Answer: B

Explanation:

Resilient operations is the high velocity IT objective that considers an organization's ability to continue providing business services when disruptive events affect its digital products. Resilient operations ensure the availability, reliability, and performance of the digital products and services, as well as the ability to recover quickly from failures and incidents. Resilient operations also involve proactive practices such as technical debt management, chaos engineering, and site reliability engineering, which aim to improve the quality and resilience of the digital solutions. NEW QUESTION # 33

A service provider is in a partnership relationship with a service consumer. The services provided are complex with new functionality and improvements constantly being developed using agile methods.

Which is the BEST approach for validating service value?

- **A. Work together to identify methods of checking service value and check that value propositions are still valid**
- B. Regularly perform user satisfaction surveys and an analysis of the costs and risks removed from the service consumer
- C. Perform ad-hoc service reviews and produce reports of service outputs
- D. Produce service level reports and an analysis of the cost and risks of service delivery

Answer: A

Explanation:

The best approach for validating service value in a partnership relationship with a service consumer is to work together to identify methods of checking service value and check that value propositions are still valid. This is because this approach aligns with the ITIL 4 guiding principles of focus on value, collaborate and promote visibility, and progress iteratively with feedback¹.

By working together, the service provider and the service consumer can co-create value and ensure that the services delivered meet the needs and expectations of the service consumer and other stakeholders. They can also share information and feedback, and adjust the services accordingly to respond to changing requirements and opportunities. Moreover, they can jointly define the criteria and indicators for measuring and validating the value of the services, such as the outcomes, costs, risks, and benefits^{2,3}.

The value propositions of the services are the statements that describe the benefits and value that the services offer to the service consumer and other stakeholders. They are based on the understanding of the service consumer's needs, preferences, and goals. The value propositions should be regularly reviewed and validated to ensure that they are still relevant and accurate, and that they reflect the current and future value of the services^{4,5}.

The other options are not the best approach for validating service value, because they are either too narrow, too passive, or too reactive. They do not involve the active collaboration and co-creation of value between the service provider and the service consumer, nor do they account for the complexity and agility of the services provided.

NEW QUESTION # 34

A company has begun a new global line of business that has changed how IT supports the new systems.

Recognizing the urgent need for two-way communication on the required changes, IT managers are trying to find better ways to obtain feedback than a standing agenda at staff meetings.

Which describes the BEST approach for establishing effective feedback channels?

- A. Research how individual teams communicate internally and use the most popular collaboration tools to collect feedback
- B. Establish office hours where staff are encouraged to drop by without appointments and discuss any concerns they have
- C. Publish a printed weekly newsletter that clearly and consistently communicates change
- D. Initiate a project to select and implement a collaboration tool to facilitate two-way communication with staff

Answer: A

Explanation:

According to ITIL 4, one of the guiding principles is to progress iteratively with feedback. This means that IT service providers should break down complex tasks or changes into manageable chunks, seek feedback after each iteration, and use the feedback to improve and adapt their actions. Feedback is essential for co-creating value with customers and stakeholders, as well as for learning and improving the quality of IT services.

Therefore, IT managers should establish effective feedback channels that enable two-way communication with staff and other parties involved in the IT service delivery. The best approach for establishing effective feedback channels is to research how individual teams communicate internally and use the most popular collaboration tools to collect feedback. This way, IT managers can leverage the existing communication preferences and habits of the staff, and avoid imposing a new tool or method that may not be suitable or convenient for them. By using the most popular collaboration tools, IT managers can also ensure that the feedback is timely, relevant, and accessible for all parties. This approach aligns with the ITIL 4 principle of collaborating and promoting visibility, which encourages IT service providers to work together across boundaries, share information, and make use of diverse perspectives and feedback. Therefore, the answer is A). Research how individual teams communicate internally and use the most popular collaboration tools to collect feedback. The other options are not the best approach for establishing effective feedback channels, because they either do not facilitate two-way communication, or do not consider the needs and preferences of the staff. For example, option B. Establish office hours where staff are encouraged to drop by without appointments and discuss any concerns they have, may not be convenient or practical for staff who work remotely or have different schedules. Option C. Initiate a project to select and implement a collaboration tool to facilitate two-way communication with staff, may take too long and may not match the expectations or requirements of the staff. Option D. Publish a printed weekly newsletter that clearly and consistently communicates change, may not be effective or efficient for collecting feedback, as it is a one-way communication channel that does not allow for immediate or interactive responses. NEW QUESTION # 35

In which TWO situations should be ITIL guiding principles be considered?

1. In every initiative
2. In all relationships with stakeholders
3. Only specific initiatives where the principle is relevant
4. Only specific stakeholder relationships where the principle is relevant

- A. 1 and 4
- B. 1 and 2
- C. 2 and 3
- D. 3 and 4

Answer: A

Explanation:

Explanation

An 'outside in' approach is one that focuses on the customer perspective and value, rather than the internal processes and governance of the IT organization. According to ITIL 4, this approach helps to co-create value with customers and users, and align the IT services with the business strategy and outcomes. Therefore, conducting customer and user satisfaction surveys to gather feedback on how customers and users perceive the support of IT services is an example of an 'outside in' approach, as it helps to understand the customer needs, expectations, and experiences. The other options are examples of an 'inside out' approach, as they focus on the internal aspects of the IT organization, such as the suppliers, the technical teams, and the software tools, rather than the customer value and outcomes.
