Candidates may have different ways to practice the CAD study materials, some may like to practice in paper, and some may like to practice it in the computer. We have three versions for you to meet your different needs. If you like to practice in the paper, CAD PDF version will be your choice, which can be printed into the hard one. If you like to practice on your computer, CAD Soft test engine will be your best, choice, besides it also stimulates the exam environment, you can experience the exam environment through this.

ServiceNow CAD (Certified Application Developer-ServiceNow) exam is a certification exam designed to test the knowledge and skills of professionals who develop applications using the ServiceNow platform. ServiceNow is a cloud-based platform that offers a range of IT service management (ITSM) and IT operations management (ITOM) solutions. The platform enables organizations to automate and streamline their business processes, improve efficiency, and enhance customer experience. The CAD Exam is aimed at professionals who are involved in developing and customizing ServiceNow applications, and who want to demonstrate their expertise in the field.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q184-Q189):

NEW QUESTION # 184
Which ATF Test step allows you to create a user with specified roles and groups for the test?

- A. Create a user
- B. Create a role
- C. Impersonation
- D. Create a group

Answer: A

Explanation:
The Automated Test Framework (ATF) is a tool that allows you to create and run automated tests on the ServiceNow platform. The ATF uses test steps to define the actions and validations for each test. The test step that allows you to create a user with specified roles and groups for the test is the Create a user test step. This test step creates a temporary user record that is deleted at the end of the test. You can specify the user name, password, roles, and groups for the user. You can also use the Impersonate a user test step to switch to the created user and perform actions as that user.
The other options are not valid test steps for creating a user. The Create a role and Create a group test steps do not exist in the ATF. To create a role or a group, you need to use the Create a record test step and specify the sys_user_role or sys_user_group table. The Impersonation test step does not create a user, but switches to an existing user.

[Impersonate a user test step]

NEW QUESTION # 185
Application developers can specify which ServiceNow page a user sees after submitting a new record using the Record Producer UI. How is the page specified?

- A. Write an after Business Rule script for the Record Producer's table: window.redirect = '<URL>';.
- B. Write a script in the Record Producer's Script field: producer.redirect = '<URL>';.
- C. Configure the page in the Module that opens the Record Producer.
- D. Create an application property to store the URL.

Answer: B

Explanation:
In ServiceNow, a Record Producer allows users to create records in a specific table through the Service Catalog. After a user submits a Record Producer, developers may want to redirect the user to a specific page. This can be achieved by setting the producer.redirect property within the Script field of the Record Producer.
For example:
javascript
CopyEdit
producer.redirect = 'incident.do?sys_id=' + current.sys_id;
This script redirects the user to the newly created incident record after submission.
Option A is incorrect because configuring the module that opens the Record Producer does not control the post-submission behavior.
Option C is unnecessary for simple redirection purposes; creating an application property to store the URL adds unnecessary complexity.
Option D is incorrect because using window.redirect in a Business Rule is not appropriate; Business Rules run on the server side and do not have access to the client-side

NEW QUESTION # 186
Which objects can you use in a Scheduled Script Execution (Scheduled Job) script?

- A. GlideUser and GlideRecord
- B. GlideSystem and current
- C. GlideRecord and current
- D. GlideSystem and GlideRecord

Answer: D

Explanation:
https://developer.servicenow.com/dev.do#!/learn/learning-
plans/quebec/servicenow_administrator/app_store_learnv2_automatingapps_quebec_scheduled_script_execution_scripts The
objects that you can use in a Scheduled Script Execution (Scheduled Job) script are GlideSystem and GlideRecord. GlideSystem
provides methods for performing system operations, such as logging, running background scripts, or getting system information.
GlideRecord provides methods for working with records in the database, such as querying, updating, inserting, or deleting records.
The current object is not available in Scheduled Script Execution scripts, as it refers to the current record on a form or list. The
GlideUser object is also not available, as it refers to the current user session. Reference: Scheduled Script Execution, GlideSystem,
GlideRecord

NEW QUESTION # 187
Why create Applications in ServiceNow?
A) To replace outdated inadequate custom business applications and processes B) To extend service delivery and management to
all enterprise departments C) To allow users full access to all ServiceNow tables, records and fields D) To extend the value of
ServiceNow

- A. a b and d
- B. a b c and d
- C. a b and c
- D. b c and d

Answer: A

Explanation:
Creating applications in ServiceNow can help businesses replace outdated, inadequate, custom business applications and processes,
extend service delivery and management to all enterprise departments, and extend the value of ServiceNow by leveraging its
platform capabilities and integrations1234.

NEW QUESTION # 188
Which of the following CANNOT be debugged using the Field Watcher?

- A. Client Scripts
- B. Script Includes
- C. Business Rules
- D. Access Controls

Answer: B

Explanation:
The Field Watcher is a debugging tool that allows you to monitor the values of fields on a form as they change due to scripts or other
actions. It can be used to debug Business Rules, Client Scripts, and Access Controls, but not Script Includes. Script Includes are
server-side scripts that define reusable functions and classes. They are not associated with any specific field or form, and therefore
cannot be watched by the Field Watcher.
