DOWNLOAD the newest TestBraindump NS0-185 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1Ns57kMEbFEeE9TVt6L3bGERVmb0UTeKi>

The APP online version of the NS0-185 exam questions can provide you with exam simulation. And the good point is that you don't need to install any software or app. All you need is to click the link of the online NS0-185 training material for one time, and then you can learn and practice offline. If our NS0-185 Study Material is updated, you will receive an E-mail with a new link. You can follow the new link to keep up with the new trend of NS0-185 exam.

TestBraindump also offers you a demo version of the NS0-185 exam dumps. Often NS0-185 test takers run on a tight budget so they just can not risk wasting it on invalid Network Appliance NS0-185 Study Materials. Thus TestBraindump offers a demo version of Network Appliance NS0-185 actual exam questions before buying it.

## NS0-185 Trustworthy Exam Content - NS0-185 Valid Exam Materials

The study material to get NetApp Storage Installation Engineer, ONTAP Professional Exam should be according to individual's learning style and experience. Real Network Appliance NS0-185 Exam Questions certification makes you more dedicated and professional as it will provide you complete information required to work within a professional working environment. These questions will familiarize you with the NS0-185 Exam Format and the content that will be covered in the actual test. You will not get a passing score if you rely on outdated practice questions.

## Network Appliance NetApp Storage Installation Engineer, ONTAP Professional Exam Sample Questions (Q42-Q47):

### NEW QUESTION # 42

You are preparing to add a 2-node AFF A250 system to an existing 4-node AFF A800 cluster with Cisco Nexus 3232C switches. The cluster switches are currently running the Cluster-HA RCF.

In this scenario, which two steps are required to install the AFF A250 system? (Choose two.)

- A. Cable the AFF A250 nodes to the next free ports on the switch.
- B. Cable the AFF A250 nodes to the breakout ports on the switch.
- C. Load the Cluster-HA-Breakout RCF
- D. Load the Storage RCF

**Answer: B,C**

Explanation:

AFF A250 systems use 25GbE ports with breakout cabling for cluster and HA traffic. When adding these nodes to switches running a standard Cluster-HA RCF, the switches must be updated to a Cluster-HA-Breakout RCF to support breakout ports. The nodes

must then be cabled to the breakout ports. Therefore, B and D are correct.

#### NEW QUESTION # 43

A customer has a six-node cluster running NFS and FCP. The customer wants to add nodes to the cluster. How many nodes would be added in this scenario?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

Explanation (250-350 words):

ONTAP clusters support a maximum of 24 nodes per cluster. In this scenario, the cluster already has six nodes running mixed NAS (NFS) and SAN (FCP) workloads. When expanding an ONTAP cluster, NetApp best practices and installation rules strongly recommend adding nodes in HA pairs to maintain balanced high availability, performance symmetry, and consistent failover behavior. Because nodes must be added in pairs, the cluster can scale from six nodes to eight, ten, twelve, and so on, up to the 24-node limit. However, the question is asking how many nodes would be added, not the maximum supported. The standard NetApp expansion model for a six-node cluster is to add another three HA pairs, which equals six additional nodes, bringing the cluster to twelve nodes. Adding only two or four nodes would result in uneven scaling and is not the standard recommended growth pattern for clusters of this size. Adding eighteen nodes would exceed practical expansion planning for a six-node system and approach the cluster maximum without justification. Therefore, the correct answer is 6.

#### NEW QUESTION # 44

You have a 2-node FAS8300 ONTAP 9.8 cluster that serves SMB shares. You are configuring interface groups for higher performance and resiliency.

Which two NetApp best practices should you follow to satisfy these performance and resiliency requirements? (Choose two.)

- A. Use ports from the same NICs.
- **B. Use ports from different NICs.**
- **C. Use ports with the same chipsets.**
- D. Use ports with different chipsets.

**Answer: B,C**

Explanation:

Using ports from different NICs protects against single NIC failure, while using the same chipset ensures consistent performance characteristics. This combination maximizes resiliency and performance.

#### NEW QUESTION # 45

You are setting up logical interfaces for client access. Which two types of LIFs are typically used to provide data access to NAS and SAN clients in ONTAP environments?

- **A. Intercluster LIFs**
- **B. Data LIFs**
- C. Cluster LIFs
- D. Management LIFs

**Answer: A,B**

Explanation:

Data LIFs provide client access, while intercluster LIFs support replication traffic. Cluster and management LIFs serve internal communication and administration, not client data access.

## NEW QUESTION # 46

Which logical interface has a fixed firewall policy?

- A. cluster management LIF
- B. intercluster LIF
- C. cluster LIF
- D. data LIF

**Answer: C**

Explanation:

Within ONTAP SAN concepts, logical interfaces (LIFs) are assigned specific roles, and each role has predefined networking and security behaviors. Among all LIF types, the cluster LIF is unique because it has a fixed firewall policy that cannot be modified by administrators.

Cluster LIFs are used exclusively for internal cluster communication, including replication of configuration databases, cluster heartbeat traffic, and distributed data access coordination. Because of their critical role, NetApp enforces a fixed firewall policy to protect cluster integrity and prevent accidental or malicious changes that could disrupt cluster operations.

Data LIFs, cluster management LIFs, and intercluster LIFs all allow configurable firewall policies.

Administrators can adjust these policies to permit or restrict protocols such as NFS, SMB, iSCSI, HTTPS, SSH, or SnapMirror traffic depending on deployment requirements.

By contrast, cluster LIF firewall settings are locked to ensure that only cluster-related traffic is permitted. This design ensures predictable behavior and prevents misconfiguration during installation or troubleshooting.

Therefore, the only LIF with a fixed firewall policy is the cluster LIF, making C the correct answer.

## NEW QUESTION # 47

.....

Our company has authoritative experts and experienced team in related industry. To give the customer the best service, all of our company's NS0-185 learning materials are designed by experienced experts from various fields, so our NS0-185 Learning materials will help to better absorb the test sites. One of the great advantages of buying our product is that can help you master the core knowledge in the shortest time. At the same time, our NS0-185 Learning Materials discard the most traditional rote memorization methods and impart the key points of the qualifying exam in a way that best suits the user's learning interests, this is the highest level of experience that our most authoritative think tank brings to our NS0-185 learning materials users.

**NS0-185 Trustworthy Exam Content:** <https://www.testbraindump.com/NS0-185-exam-prep.html>

NetApp Storage Installation Engineer, ONTAP Professional Exam (NS0-185) questions is a comprehensive solution for NS0-185 exam preparation, offering a wide range of features designed to help you succeed, If you treat our NS0-185 training online seriously and pay more attention on the questions and answers, you have no excuse to fail exam, Doesn't it the best reason for you to choose us NS0-185 valid practice torrent, Passing the Network Appliance NS0-185 actual test has never been easier, but with use of our preparation materials, it is simple and easy.

Why Social Media and Innovation, Migrating photos from an iPhoto or Aperture library, NetApp Storage Installation Engineer, ONTAP Professional Exam (NS0-185) questions is a comprehensive solution for NS0-185 Exam Preparation, offering a wide range of features designed to help you succeed.

## Quiz Network Appliance - NS0-185 –High Hit-Rate New Practice Materials

If you treat our NS0-185 training online seriously and pay more attention on the questions and answers, you have no excuse to fail exam, Doesn't it the best reason for you to choose us NS0-185 valid practice torrent?

Passing the Network Appliance NS0-185 actual test has never been easier, but with use of our preparation materials, it is simple and easy, Smart devices such as smartphones, tablets, and laptops all support the Network Appliance NS0-185 exam PDF dumps format of our study material.
