

High Pass-Rate JN0-683 Exam Reviews for Real Exam

2026 Latest VCETorrent JN0-683 PDF Dumps and JN0-683 Exam Engine Free Share: https://drive.google.com/open?id=1SRF_17TMVRXvBubKLJz72NIF4Eb6u0q

VCETorrent is the website that has been known to learn IT technology. VCETorrent gets high praise from our customers in real test questions and answers. It is the real website that can help you to pass Juniper JN0-683 certificate. Why is VCETorrent very popular? Because VCETorrent has a group of IT elite which is committed to provide you with the best test questions and test answers. Therefore, VCETorrent will provide you with more and better certification training materials to satisfy your need.

We can say that the Juniper JN0-683 practice questions are the top-notch Data Center, Professional (JNCIP-DC) (JN0-683) dumps that will provide you with everything that you must need for instant JN0-683 exam preparation. Take the right decision regarding your quick Data Center, Professional (JNCIP-DC) (JN0-683) exam questions preparation and download the real, valid, and updated Juniper JN0-683 exam dumps and start this journey.

Exam JN0-683 Cram, JN0-683 Test Sample Questions

For candidates who are going to buy the JN0-683 questions and answers online, they pay more attention to the prospect of personal information. We respect the privacy of our customers. If you buy the JN0-683 exam dumps from us, your personal information such as your email address or name will be protected well. Once the order finishes, the information about you will be concealed. In addition, JN0-683 Questions and answers are revised by professional specialists, therefore they are high-quality, and you can pass the exam by using them.

Juniper Data Center, Professional (JNCIP-DC) Sample Questions (Q12-Q17):

NEW QUESTION # 12

You are asked to set up an IP fabric that supports AI or ML workloads. You have chosen to use lossless Ethernet. In this scenario, which statement is correct about congestion management?

- A. ECN marks packets based on WRED settings.
- **B. The switch experiencing the congestion notifies the source device.**
- C. ECN is negotiated only among the switches that make up the IP fabric for each queue.
- D. Only the source and destination devices need ECN enabled.

Answer: B

Explanation:

In a lossless Ethernet environment, such as one designed to support AI or ML workloads, ECN (Explicit Congestion Notification) is used to signal congestion to the source device. When congestion occurs in the network, the switch experiencing the congestion marks packets with ECN to notify the source device. This allows the source to adjust its sending rate, helping to avoid further congestion and ensuring that traffic continues to flow efficiently.

NEW QUESTION # 13

Which two statements are true about IP fabrics using unnumbered BGP? (Choose two.)

- A. Unnumbered BGP peering automatically provisions IPv6 peering.
- **B. Unnumbered BGP requires that family inet is configured on each interface.**
- C. Unnumbered BGP requires that family inet6 is configured on each interface.
- **D. Unnumbered BGP peering automatically provisions IPv4 peering.**

Answer: B,D

Explanation:

* Understanding Unnumbered BGP:

* Unnumbered BGP (Border Gateway Protocol) allows BGP peering between routers without assigning specific IP addresses to the interfaces. Instead, it uses the loopback address or another router identifier for the BGP session, making IP address management more straightforward in large-scale networks.

* Family inet Configuration:

* Option C: The family inet configuration is required on each interface involved in unnumbered BGP peering to support IPv4 address families. This ensures that IPv4 peering sessions can be established between devices.

* Automatic IPv4 Peering:

* Option D: Unnumbered BGP peering automatically provisions IPv4 peering sessions. This simplifies the configuration by eliminating the need to manually assign and manage IP addresses for BGP peering.

Conclusion:

* Option C: Correct—Unnumbered BGP requires the family inet configuration for IPv4.

* Option D: Correct—Unnumbered BGP automatically provisions IPv4 peering, simplifying setup.

NEW QUESTION # 14

What are two ways in which an EVPN-signaled VXLAN is different from a multicast-signaled VXLAN? (Choose two.)

- A. An EVPN-signaled VXLAN features slower and more complete convergence.
- **B. An EVPN-signaled VXLAN is less resource intensive.**
- **C. An EVPN-signaled VXLAN can perform autodiscovery of VTEPs using BGP.**
- D. An EVPN-signaled VXLAN can perform autodiscovery of VTEPs using IS-IS.

Answer: B,C

NEW QUESTION # 15

You want to convert an MX Series router from a VXLAN Layer 2 gateway to a VXLAN Layer 3 gateway for VNI 100. You have already configured an IRB interface.

In this scenario, which command would you use to accomplish this task?

- A. set protocols isis interface irb.100 passive
- B. set vlans VLAN-100 13-interface irb.100
- **C. set bridge-domains VLAN-100 routing-interface irb.100**
- D. set protocols ospf area 0.0.0.0 interface irb.100 passive

Answer: C

Explanation:

To convert the VXLAN Layer 2 gateway to a VXLAN Layer 3 gateway for VNI 100, you need to assign the IRB interface (which is configured for Layer 3 routing) to the relevant bridge domain.

This is accomplished with the command set bridge-domains VLAN-100 routing-interface irb.100.

This command links the IRB interface (irb.100) to the bridge domain (VLAN-100) and enables Layer 3 routing for that VNI.

NEW QUESTION # 16

Given the configuration shown in the exhibit, why has the next hop remained the same for the EVPN routes advertised to the peer 203.0.113.2?

- A. The vrf-export parameter must be applied.

- B. EVPN routes cannot have the next hop changed.
- **C. The vpn-apply-export parameter must be applied to this peer.**
- D. The export policy is incorrectly configured.

Answer: C

Explanation:

The vpn-apply-export parameter must be applied to this peer: In the given configuration, the policy statement CHANGE_NH is defined to change the next-hop IP for routes. However, the vpn-apply-export parameter is missing, which is necessary for applying export policies to routes associated with a particular VPN. Without this parameter, the export policy does not apply to the EVPN routes, and thus the next-hop remains unchanged.

NEW QUESTION # 17
