We guarantee that you can pass the exam easily. This certification exam can also help you tap into many new avenues and opportunities. This is really worth the price, the value it creates is far greater than the price.

HPE Aruba Networking ClearPass Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

A company uses ClearPass with Active Directory as both the authentication and authorization source. What is the advantage of this setup?

- A. It allows for both credential validation and account attribute retrieval.
- B. It ensures that only internal devices can access the network.
- C. It simplifies the network topology by eliminating external servers.

Answer: A

Explanation:

Using Active Directory for both authentication and authorization allows ClearPass to validate user credentials and simultaneously retrieve directory attributes such as group membership. This enables consistent, attribute-based policy decisions without requiring a separate identity source.

NEW QUESTION # 55

A user is experiencing intermittent network disconnections while their device is undergoing health checks via the OnGuard persistent agent. After each disconnection, the device is forced to re-authenticate. What is the primary mechanism that triggers these disconnections and ensures proper network access?

- A. The network switch automatically resets the port after detecting a posture change in the device
- B. The OnGuard agent sends a disconnect signal to the device after completing each health check.
- C. ClearPass processes the Enforcement Profile and sends a RADIUS CoA terminate session message to the NAD, causing the client to disconnect and re-authenticate.

Answer: C

Explanation:

When a posture state changes during OnGuard health checks, ClearPass reevaluates policy and enforcement. To ensure the updated access decision is applied, ClearPass sends a RADIUS Change of Authorization terminate session message to the network access device, forcing the client to disconnect and re-authenticate with the correct network privileges.

NEW QUESTION # 56

A company wants to ensure that all BYOD devices undergo a health check before gaining full access to the network. They plan to use ClearPass OnGuard for this purpose. Given that they have a guest network where devices initially connect to an open guest SSID before full authentication, which agent should they use?

- A. The dissolvable agent, because it does not require the client to have an IP address before performing health checks.
- B. The dissolvable agent, because it can perform health checks via a captive portal without requiring pre-installed software.
- C. The persistent agent, because it can operate independently of the network connection type.

Answer: B

Explanation:

The Dissolvable Agent is ideal for BYOD and Guest scenarios where you cannot mandate that users install permanent software on their personal devices. When a user connects to the guest portal, the agent is downloaded as a temporary executable, runs the required Health Checks, reports the results back to ClearPass, and then removes itself from the system. This provides security without the administrative overhead of managing software installations on non-corporate hardware.

NEW QUESTION # 57

In a corporate network following Zero Trust best practices, a security team notices unusual activity from a previously authenticated and authorized device. What should the team do next to ensure the network's security?

- A. Reduce the device's privileges or quarantine it for further investigation.
- B. Ignore the activity since the device was already authenticated.
- C. Increase the device's access privileges to monitor more closely.

Answer: A

Explanation:

Zero Trust security assumes that trust is never permanent. When unusual behavior is detected, access must be dynamically adjusted by reducing privileges or quarantining the device to prevent potential threats while the activity is investigated.

NEW QUESTION # 58

A network administrator is setting up ClearPass for a large organization and needs to ensure that user credentials are validated efficiently while also gathering rich context about the users. Which authentication source should the administrator prioritize to meet the need?

- A. Internal Database
- B. Active Directory
- C. SQL Servers

Answer: B

Explanation:

Active Directory should be prioritized because it allows ClearPass to efficiently validate user credentials and retrieve rich contextual information such as group membership, organizational roles, and user attributes. This enhances both authentication accuracy and policy-based access control.

NEW QUESTION # 59

.....

Taking these mock exams is important because it tells you where you stand. People who are confident about their knowledge and expertise can take these HPE6-A88 practice tests and check their scores to know where they lack. This is good practice to be a pro and clear your HPE Aruba Networking ClearPass Exam (HPE6-A88) exam with amazing scores. TestInsides practice tests simulate the real HPE6-A88 exam questions environment.
