Observability-Self-Hosted-Fundamentals試験勉強書 & Observability-Self-Hosted-Fundamentalsファンデーション

製品がどれほど優れていても、ユーザーは使用過程でいくつかの難しい問題に遭遇します。 Observability-Self-Hosted-Fundamentalsの実際の試験資料も例外ではありません。最高の製品体験を楽しむために、ユーザーが使用中のプロセスで問題が見つかった場合は、Observability-Self-Hosted-Fundamentalsを初めてチェックして、試験問題のパフォーマンス、ユーザーが問題を解決するのに役立つ専門のメンテナンススタッフ。 Observability-Self-Hosted-Fundamentalsラーニングリファレンスファイルには、効率の良い製品メンテナンスチームがあり、数分でObservability-Self-Hosted-Fundamentals試験の質問を送信できます。

SolarWinds Observability-Self-Hosted-Fundamentals 認定試験の出題範囲：

トピック	出題範囲
トピック 1	• SolarWinds Platform Architecture and Deployment: This domain covers the SolarWinds Platform's structural components, deployment requirements for installation, and network discovery capabilities for identifying and adding devices to the monitoring environment.
トピック 2	• SolarWinds Platform Troubleshooting Tools: This domain covers troubleshooting tools including AppStack and PerfStack for correlating performance data, and Intelligent Mapping for visualizing network topology to identify and resolve issues.
トピック 3	• Node Management: This domain focuses on managing monitored nodes including handling node statuses and working with agents for monitoring and data collection from endpoints.

トピック4	• Alerts: This domain covers creating and managing alerts that notify administrators of important events, threshold breaches, or conditions requiring attention across monitored infrastructure.

Observability-Self-Hosted-Fundamentalsファンデーション、Observability-Self-Hosted-Fundamentals日本語版サンプル

Observability-Self-Hosted-Fundamentals学習教材があれば、あなたは自分の夢を叶えます。Observability-Self-Hosted-Fundamentals学習教材はすごく人気があります。全世界のお客様からいい評価をもらいました。なんといっても、自分はObservability-Self-Hosted-Fundamentals学習教材を利用したら、その資料のよさを感じることができます。大切なのは、Observability-Self-Hosted-Fundamentals学習教材の合格率が高いので、多くのお客様はObservability-Self-Hosted-Fundamentals認定試験資格証明書を取得したということです。

SolarWinds Observability Self-Hosted Fundamentals 認定 Observability-Self-Hosted-Fundamentals 試験問題 (Q48-Q53):

質問 #48
Which three of the following user accesses are available when restricting access to reports on SolarWinds Hybrid Cloud Observability (HCO)? (Choose three.)

- A. standard users can be prevented from accessing reports by other users
- B. standard users can be prevented from accessing the report manager
- C. standard users can be prevented from accessing all reports
- D. standard users can be prevented from accessing their reports

正解：A、B、C

解説：
Access control for reporting in Hybrid Cloud Observability (HCO) is highly granular, allowing administrators to define exactly what a "standard" (non-admin) user can do within the reporting module. According to the SolarWinds Platform User Account Managementguides, three distinct restrictions can be applied:
* Preventing Access to All Reports (A): By setting a "Report Limitation" on the user account to "No Reports," the entire module is effectively hidden from the user.
* Preventing Access to Reports by Other Users (B): This is a privacy and security feature.
Administrators can configure report permissions so that users can only see the reports they have created or those explicitly shared with them, hiding the potentially sensitive custom reports created by other teams.
* Preventing Access to the Report Manager (C): The "Report Manager" is the administrative interface used to create, schedule, and delete reports. By removing the "Manage Reports" permission from a user account, you allow them toviewandrunexisting reports but prevent them from accessing the management tools required to modify them.
Option D is logically incorrect because if a user has access to reports at all, they must be able to see the ones they are authorized for; "preventing access to their own reports" while allowing others would not be a standard security use case.

質問 #49
Which two of the following configurations are available as content for web-based reports? (Choose two.)

- A. existing widgets
- B. existing diagrams
- C. existing intelligent maps
- D. existing PerfStack projects

正解：A、C

解説：
The modern web-based report builder in SolarWinds is highly integrated with the rest of the platform's visualization tools. According to theSolarWinds Platform Reporting Guide, reports are no longer limited to simple data tables; they can incorporate rich, interactive

content already created elsewhere in the console.

Two key configurations available as content are existing intelligent maps (A) and existing widgets (D).

* Existing Intelligent Maps: This allows an administrator to take a visually mapped dependency or network topology and embed it directly into a scheduled report. This provides a geographical or logical context to the data that static tables cannot provide.

* Existing Widgets: Most widgets (resources) found on Summary or Node Details pages-such as "Top 10 Nodes by Response Time" or "Active Alerts"-can be added to a report as a component. This ensures consistency between what users see in real-time on their dashboards and what they receive in their weekly PDF summaries.

While you can embed performance data, the report builder is designed to consume these pre-configured UI elements (Maps and Widgets) to simplify report creation and maintain a unified look and feel across the observability suite.

質問 # 50

Multiple users have access to SolarWinds Hybrid Cloud Observability (HCO) reports. All users are permitted to view and run existing reports, however restrictions for a smaller group of users are needed for editing and creating reports. How should these restrictions be accomplished?

- A. remove manage reports button for any user without edit permissions
- B. remove reports view from menu bar for any user without edit permissions
- C. set alert limitation category to default for select users with edit permissions
- D. set allow alert management rights to yes for select users with edit permissions

正解：A

解説：

The ability to create or modify reports is a high-level administrative function in the SolarWinds Platform, distinct from the ability to simply view them. According to the SolarWinds Platform User Account Management guide, this is controlled by the Report Management right.

To restrict a specific group of users from creating or editing reports while still allowing them to view existing ones, the administrator must remove the "Manage Reports" permission from their user accounts. When this right is set to "No," the "Manage Reports" button is hidden from the "All Reports" view for that user. They can still click on and run any report they have access to, but they will lack the interface options to enter the "Report Builder," change schedules, or delete entries. This provides a secure way to delegate report consumption to the wider team while centralizing report creation within a smaller group of "power users" or administrators. Option D is incorrect as it refers to Alerts, which is a separate permission set entirely.

質問 # 51

A SolarWinds* Hybrid Cloud Observability (HCO) user account is to be used to run a NOC view in an operations center. The view is to run continuously without being logged out. Which setting should be configured within the user account to accomplish this goal?

- A. set account expiration date to 1 year from now
- B. grant account manage view permissions
- C. grant account manage dashboard permissions
- D. disable session timeout default settings

正解：D

解説：

For Network Operations Centers (NOCs) that display SolarWinds dashboards on large wall-mounted monitors, maintaining a continuous session is vital. By default, the SolarWinds Platform implements a security timeout (often 15 to 20 minutes of inactivity) that automatically logs a user out to protect the console.

According to the SolarWinds Platform Administrator Guide, to prevent this for a dedicated NOC account, the administrator must disable session timeout default settings (A). This is found within the "Advanced" section of the specific User Account settings. When this toggle is enabled, the platform ignores the global session timeout for that specific login, allowing the dashboard to refresh indefinitely without requiring manual re- authentication.

While granting management permissions (Options B and C) might allow the user to create the view, it does nothing to prevent the session from expiring. Similarly, an "Account Expiration Date" (Option D) only controls the long-term validity of the account, not the duration of an individual active web session. Disabling the timeout is the standard procedural requirement for any "Service Account" or "Display Account" used in a continuous monitoring environment.

質問 # 52

The built-in custom property, AssetTag, was set to mandatory after device monitoring had been set up. Which two of the following results can be expected from this action? (Choose two.)

- **A. asset tag must be provided for all existing monitored devices when edited**
- **B. asset tag must be provided after the action for all existing monitored devices**
- C. asset tag must be provided immediately for all existing monitored devices
- D. asset tag must be provided for all existing monitored devices when polled

正解：A、B

解説：

Custom properties can be configured as "Mandatory" to ensure data integrity across the platform. According to theSolarWinds Platform Administrator Guide, changing a property like AssetTag to mandatory after nodes already exist creates an enforcement requirement.

The system does not retroactively block polling or delete nodes (Option B and D are incorrect), but it enforces the requirement during administrative interaction. Specifically:

* Requirement after the action (A): Moving forward, any new node added to the system will require the AssetTag field to be populated before the node can be saved.

* Requirement when edited (C): For existing nodes that do not yet have an AssetTag, the platform will permit them to exist and be polled normally. However, the next time an administrator attempts toeditthe properties of that node, the Web Console will block the "Save" action until a value is provided for the mandatory AssetTag field. This ensures that as the environment is managed over time, the metadata is gradually backfilled until all mandatory requirements are satisfied.
