Braindumps AI-102 Pdf, AI-102 Latest Exam Experience

Education degree does not equal strength, and it does not mean ability. Education degree just mean that you have this learning experience only. And the real ability is exercised in practice, it is not necessarily linked with the academic qualifications. Do not feel that you have no ability, and don't doubt yourself. When you choose to participate in the Microsoft AI-102 Exam, it is necessary to pass it. If you are concerned about the test, however, you can choose ExamDumpsVCE's Microsoft AI-102 exam training materials. No matter how low your qualifications, you can easily understand the content of the training materials. And you can pass the exam successfully.

Microsoft Designing and Implementing a Microsoft Azure AI Solution Sample Questions (Q13-Q18):

NEW QUESTION # 13
You plan to use containerized versions of the Anomaly Detector API on local devices for testing and in on-premises datacenters. You need to ensure that the containerized deployments meet the following requirements:
Prevent billing and API information from being stored in the command-line histories of the devices that run the container.
Control access to the container images by using Azure role-based access control (Azure RBAC).
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. (Choose four.) NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Actions

- Create a custom Dockerfile.
- Pull the Anomaly Detector container image.
- Distribute a `docker run` script.
- Push the image to an Azure container registry.
- Build the image.
- Push the image to Docker Hub.

Answer Area

Answer:

Explanation:

Actions

- Create a custom Dockerfile.
- Pull the Anomaly Detector container image.
- Distribute a `docker run` script.
- Push the image to an Azure container registry.
- Build the image.
- Push the image to Docker Hub.

Answer Area

- Pull the Anomaly Detector container image.
- Create a custom Dockerfile.
- Build the image.
- Push the image to an Azure container registry.

NEW QUESTION # 14

Case Study 1 - Wide World Importers

Overview

Existing Environment

A company named Wide World Importers is developing an e-commerce platform.

You are working with a solutions architect to design and implement the features of the e- commerce platform. The platform will use microservices and a serverless environment built on Azure.

Wide World Importers has a customer base that includes English, Spanish, and Portuguese speakers.

Applications

Wide World Importers has an App Service plan that contains the web apps shown in the following table.

Name	Description
Product Management	An app used by employees to create and manage products. The app and the expected inputs from the employees are in English.
Inventory Tracking	An app used by employees to manage inventory when dispatching orders, receiving refunds, and receiving consignments from suppliers.

Azure Resources

You have the following resources:

* An Azure Active Directory (Azure AD) tenant

- The tenant supports internal authentication.

- All employees belong to a group named AllUsers.

- Senior managers belong to a group named LeadershipTeam.

* An Azure Functions resource

- A function app posts to Azure Event Grid when stock levels of a product change between OK, Low Stock, and Out of Stock.

The function app uses the Azure Cosmos DB change feed.

* An Azure Cosmos DB account

- The account uses the Core (SQL) API.

- The account stores data for the Product Management app and the Inventory Tracking app.

* An Azure Storage account

- The account contains blob containers for assets related to products.

- The assets include images, videos, and PDFs.

* An Azure AI Services resource named wwics

* An Azure Video Analyzer for Media (previously Video Indexer) resource named wwivi

Requirements

Business Goals

Wide World Importers wants to leverage AI technologies to differentiate itself from its competitors.

Planned Changes

Wide World Importers plans to start the following projects:

* A product creation project: Help employees create accessible and multilingual product entries, while expediting product entry creation.

* A smart e-commerce project: Implement an Azure AI Search solution to display products for customers to browse.

* A shopping on-the-go project: Build a chatbot that can be integrated into smart speakers to support customers.

Business Requirements

Wide World Importers identifies the following business requirements for all the projects:

* Provide a multilingual customer experience that supports English, Spanish, and Portuguese.

* Whenever possible, scale based on transaction volumes to ensure consistent performance.

* Minimize costs.

Governance and Security Requirements

Wide World Importers identifies the following governance and security requirements:

* Data storage and processing must occur in datacenters located in the United States.

* Azure AI Services must be inaccessible directly from the internet.

Accessibility Requirements

Wide World Importers identifies the following accessibility requirements:

* All images must have relevant alt text.

* All videos must have transcripts that are associated to the video and included in product descriptions.

* Product descriptions, transcripts, and all text must be available in English, Spanish, and Portuguese.

Product Creation Requirements

Wide World Importers identifies the following requirements for improving the Product Management app:

* Minimize how long it takes for employees to create products and add assets.

* Remove the need for manual translations.

Smart E-Commerce Requirements

Wide World Importers identifies the following requirements for the smart e-commerce project:

* Ensure that the Azure AI Search solution meets a Service Level Agreement (SLA) of 99.9% availability for searches and index writes.

* Provide users with the ability to search insight gained from the images, manuals, and videos associated with the products.

* Support autocompletion and autosuggestion based on all product name variants.

* Store all raw insight data that was generated, so the data can be processed later.

* Update the stock level field in the product index immediately upon changes.

* Update the product index hourly.

Shopping On-the-Go Requirements

Wide World Importers identifies the following requirements for the shopping on-the-go chatbot:

* Answer common questions.

* Support interactions in English, Spanish, and Portuguese.

* Replace an existing FAQ process so that all Q&A is managed from a central location.

* Provide all employees with the ability to edit Q&As. Only senior managers must be able to publish updates.

* Support purchases by providing information about relevant products to customers. Product displays must include images and warnings when stock levels are low or out of stock.

Product JSON Sample

You have the following JSON sample for a product.

```
{
    "sku": "b1",
    "name": {
        "en":"Bicycle",
        "es": "Bicicleta",
        "pt": "Bicicleta"
    },
    "stocklevel": "Out of Stock",
    "description": {
        "en":"Bicycle",
        "es": "Bicicleta",
        "pt": "Bicicleta"
    },
    "image":
{"uri": "https://upload.worldwideimporters.org/bicycle.jpg",
        "alttext": {
            "en":"Bicycle",
            "es": "Bicicleta",
            "pt": "Bicicleta"
        }
    },
    "createdUtc": "2020-02-14T06:08:39Z",
    "language": "en"
}
```

You are developing the smart e-commerce project.

You need to implement autocompletion as part of the Azure AI Search solution.

Which three actions should you perform? Each correct answer presents part of the solution.

(Choose three.)

NOTE: Each correct selection is worth one point.

- A. Set the searchAnalyzer property for the three product name variants.
- B. Add a suggester for each of the three product name fields.
- C. Add a suggester that has the three product name fields as source fields.
- D. Set the analyzer property for the three product name variants.
- E. Make API queries to the search endpoint and include the product name fields in the searchFields query parameter.
- F. Make API queries to the autocomplete endpoint and include suggesterName in the body.

Answer: C,D,F

Explanation:

Scenario: Support autocompletion and autosuggestion based on all product name variants.

A: Call a suggester-enabled query, in the form of a Suggestion request or Autocomplete request, using an API. API usage is illustrated in the following call to the Autocomplete REST API.

POST /indexes/myxboxgames/docs/autocomplete?search&api-version=2020-06-30

{

"search": "minecraf",

"suggesterName": "sg"

}

B: In Azure AI Search, typeahead or "search-as-you-type" is enabled through a suggester. A suggester provides a list of fields that undergo additional tokenization, generating prefix sequences to support matches on partial terms. For example, a suggester that includes a City field with a value for "Seattle" will have prefix combinations of "sea", "seat", "seatt", and "seattl" to support typeahead.

G. Use the default standard Lucene analyzer ("analyzer": null) or a language analyzer (for example, "analyzer": "en.Microsoft") on the field.

https://docs.microsoft.com/en-us/azure/search/index-add-suggesters

NEW QUESTION # 15
Drag and Drop Question
Match the Azure Cosmos DB APIs to the appropriate data structures. To answer, drag the appropriate API from the column on the left to its data structure on the right. Each API may be used once, more than once, or not at all.
NOTE: Each correct match is worth one point.

Answer:

Explanation:

NEW QUESTION # 16
You build a QnA Maker resource to meet the chatbot requirements.
Which RBAC role should you assign to each group? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Answer Area

Management-Accountants ▼

Owner
Contributor
⌐Cognitive Services User ⌐
Cognitive Services QnA Maker Read
Cognitive Services QnA Maker Editor

Consultant-Accountants ▼

Owner
Contributor
Cognitive Services User
Cognitive Services QnA Maker Read
⌐Cognitive Services QnA Maker Editor⌐

Agent-CustomerServices ▼

Owner
Contributor
Cognitive Services User
⌐Cognitive Services QnA Maker Read⌐
Cognitive Services QnA Maker Editor

Explanation
Box 1: Cognitive Service User
Ensure that the members of a group named Management-Accountants can approve the FAQs.
Approve=publish.
Cognitive Service User (read/write/publish): API permissions: All access to Cognitive Services resource except for ability to:
1. Add new members to roles.
2. Create new resources.
Box 2: Cognitive Services QnA Maker Editor
Ensure that the members of a group named Consultant-Accountants can create and amend the FAQs.
QnA Maker Editor: API permissions:
1. Create KB API
2. Update KB API
3. Replace KB API
4. Replace Alterations
5. "Train API" [in new service model v5]
Box 3: Cognitive Services QnA Maker Read
Ensure that the members of a group named the Agent-CustomerServices can browse the FAQs.
QnA Maker Read: API Permissions:
1. Download KB API
2. List KBs for user API
3. Get Knowledge base details
4. Download Alterations
Generate Answer

https://docs.microsoft.com/en-us/azure/cognitive-services/qnamaker/concepts/role-based-access-control

NEW QUESTION # 17
You are developing a photo application that will find photos of a person based on a sample image by using the Face API.
You need to create a POST request to find the photos.
How should you complete the request? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation
Box 1: findsimilars
https://docs.microsoft.com/en-us/rest/api/faceapi/face/find-similar
Box 2: matchPerson
Find similar has two working modes, "matchPerson" and "matchFace". "matchPerson" is the default mode that it tries to find faces of the same person as possible by using internal same-person thresholds. It is useful to find a known person's other photos. Note that an empty list will be returned if no faces pass the internal thresholds.
"matchFace" mode ignores same-person thresholds and returns ranked similar faces anyway, even the similarity is low. It can be used in the cases like searching celebrity-looking faces.
