

# Latest GitHub-Advanced-Security Learning Materials, Latest GitHub-Advanced-Security Dumps Pdf

P.S. Free & New GitHub-Advanced-Security dumps are available on Google Drive shared by Prep4away:  
<https://drive.google.com/open?id=1aaTAJZYQnfVQTxzYZ2qYZhDMLQyJSzEf>

This GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) software has a simple-to-use interface. By using the GitHub-Advanced-Security practice exam software, you can evaluate your mistakes at the end of every take and overcome them. Our software helps you to get familiar with the format of the original GitHub-Advanced-Security test. Software lets you customize your GitHub GitHub-Advanced-Security Practice Exam's duration and question numbers as per your practice needs. You just need an active internet connection to confirm the license of your product. All Windows-based computers support this GitHub-Advanced-Security practice exam software.

## GitHub GitHub-Advanced-Security Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Use code scanning with CodeQL: This section of the exam measures skills of a DevSecOps Engineer and covers working with CodeQL to write or customize queries for deeper semantic analysis. Candidates should demonstrate how to configure CodeQL workflows, understand query suites, and interpret CodeQL alerts to uncover complex code issues beyond standard static analysis.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Configure and use code scanning: This section of the exam measures skills of a DevSecOps Engineer and covers enabling and customizing GitHub code scanning with built-in or marketplace rulesets. Examinees must know how to interpret scan results, triage findings, and configure exclusion or override settings to reduce noise and focus on high-priority vulnerabilities.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Describe the GHAS security features and functionality: This section of the exam measures skills of a GitHub Administrator and covers identifying and explaining the built-in security capabilities that GitHub Advanced Security provides. Candidates should be able to articulate how features such as code scanning, secret scanning, and dependency management integrate into GitHub repositories and workflows to enhance overall code safety.</li></ul>

# Pass Guaranteed 2026 GitHub GitHub-Advanced-Security: Latest GitHub Advanced Security GHAS Exam Learning Materials

If you are interested in Soft test engine of GitHub-Advanced-Security practice questions, you should know below information better. Soft test engine should be downloaded in personal computer first time online, and then install. After installment you can use GitHub-Advanced-Security practice questions offline. You can also copy to other electronic products such as Phone, Ipad. On the hand, our exam questions can be used on more than 200 personal computers. If you purchase Soft test engine of GitHub-Advanced-Security Practice Questions for your companies, it will be very useful.

## GitHub Advanced Security GHAS Exam Sample Questions (Q43-Q48):

### NEW QUESTION # 43

Where can you view code scanning results from CodeQL analysis?

- A. A CodeQL query pack
- B. At Security advisories
- C. A CodeQL database
- **D. The repository's code scanning alerts**

**Answer: D**

Explanation:

All results from CodeQL analysis appear under the repository's code scanning alertstab. This section is part of the Securitytab and provides a list of all current, fixed, and dismissed alerts found by CodeQL.

A CodeQL database is used internally during scanning but does not display results. Query packs contain rules, not results. Security advisories are for published vulnerabilities, not per-repo findings.

### NEW QUESTION # 44

You are managing code scanning alerts for your repository. You receive an alert highlighting a problem with data flow. What do you click for additional context on the alert?

- A. Security
- **B. Show paths**
- C. Code scanning alerts

**Answer: B**

Explanation:

When dealing with a data flow issue in a code scanning alert, clicking on "Show paths" provides a detailed view of the data's journey through the code. This includes the source of the data, the path it takes, and where it ends up (the sink). This information is crucial for understanding how untrusted data might reach sensitive parts of your application and helps in identifying where to implement proper validation or sanitization.

### NEW QUESTION # 45

Which patterns are secret scanning validity checks available to?

- A. Custom patterns
- B. High entropy strings
- **C. Partner patterns**
- D. Push protection patterns

**Answer: C**

Explanation:

Validity checks- where GitHub verifies if a secret is still active - are available for partner patterns only.

These are secrets issued by GitHub's trusted partners (like AWS, Slack, etc.) and have APIs for GitHub to validate token activity status.

Custom patterns and high entropy patterns do not support automated validity checks.

### NEW QUESTION # 46

Which of the following features helps to prioritize secret scanning alerts that present an immediate risk?

- A. Custom pattern dry runs
- B. Push protection
- C. Secret validation
- D. Non-provider patterns

**Answer: C**

Explanation:

Secret validation checks whether a secret found in your repository is still valid and active with the issuing provider (e.g., AWS, GitHub, Stripe). If a secret is confirmed to be active, the alert is marked as verified, which means it's considered a high-priority issue because it presents an immediate security risk.

This helps teams respond faster to valid, exploitable secrets rather than wasting time on expired or fake tokens.

### NEW QUESTION # 47

Which of the following benefits do code scanning, secret scanning, and dependency review provide?

- A. Search for potential security vulnerabilities, detect secrets, and show the full impact of changes to dependencies
- B. Automatically raise pull requests, which reduces your exposure to older versions of dependencies
- C. View alerts about dependencies that are known to contain security vulnerabilities
- D. Confidentially report security vulnerabilities and privately discuss and fix security vulnerabilities in your repository's code

**Answer: A**

Explanation:

These three features provide a complete layer of defense:

\* Code scanning identifies security flaws in your source code

\* Secret scanning detects exposed credentials

\* Dependency review shows the impact of package changes during a pull request Together, they give developers actionable insight into risk and coverage throughout the SDLC.

### NEW QUESTION # 48

.....

To make preparation easier for you, Prep4away has created an GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) PDF format. This format follows the current content of the GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) real certification exam. The GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) dumps PDF is suitable for all smart devices making it portable. As a result, there are no place and time limits on your ability to go through GitHub GitHub-Advanced-Security real exam questions pdf.
