- A. Manages production with AI automation in real-time
- B. Aligns financial optimization
- C. Automates procurement
- D. Improves logistics

Answer: A

Solution:

B . Manages production with AI automation in real-time

SAP Digital Manufacturing's real-time Production Orchestration (Resource Orchestration) empowers supervisors to dispatch, schedule, monitor, and automatically balance production on a live basis-responding instantly to events on the shop floor and optimizing resources like labor, equipment, and materials us.io

group.com+6learning.sap.com+6help.sap.com+6sap.com+8sap.com+8learning.sap.com+8.

Here's how the other options stack up:

* A. Improves logistics - While orchestration connects operations with logistics, its primary purpose is on-floor execution and resource balancing-not optimizing logistics functions directly.

* C. Automates procurement - This relates to supply chain/procurement modules in SAP, not manufacturing execution orchestration.

* D. Aligns financial optimization - Financial alignment comes primarily from ERP integration, not from real-time production orchestration.

So the best fit is option B.

Options A, C, and D do not directly relate to order fulfillment speed in the high-volume warehouse context on learning.sap.com.

NEW QUESTION # 14

How does geolocation tracking in SAP Transportation Management reduce costs and improve carrier interactions for transporting perishable goods?

- **A. Manages global logistics using real-time geolocation**
- B. Improves production processes
- C. Optimizes financial processes
- D. Automates procurement

Answer: A

Explanation:

Solution:

Based solely on content from learning.sap.com (and related SAP documentation), the correct answer is:

* D. Manages global logistics using real-time geolocation

Geolocation tracking in SAP Transportation Management, particularly via SAP Business Network Global Track & Trace, provides real-time visibility across global logistics networks. This functionality reduces costs and enhances interactions with carriers-especially for perishable goods-by enabling predictive ETAs, milestone awareness, event-triggered alerts, and seamless collaboration with carriers and logistics partners.

The other options (A, B, and C) are not relevant to geolocation tracking in this context.
